We object to the process of identifying and considering strategic options which has excluded the specific consideration of a new settlement at the former Airfield at Llandow. Options 4 and 8 refer to a new rural settlement but because of the assumption that a new settlement would have to be 4-5000 dwellings Llandow has not been considered. The proposal for Llandow is the only Candidate Site submitted for a new settlement and has not been given consideration. The UDP Inspector in his report (November 2000) stated "I believe the redevelopment of Llandow should be reviewed later in the plan's life...to define a new settlement at the objection site at this stage would be premature". Llandow should be considered as a strategic site and as such should be subject to a full sustainability appraisal. Up to now Llandow has not been specifically considered and if the draft Preferred Strategy is adopted by the Council then it will not be given consideration and will not be subject to the review as recommended by the UDP Inspector. This situation is totally unacceptable and makes the plan unsound.

Paragraph 8.6.3 states that the appraisal indicated options 5, 7 and 8 performed best against the SA objectives. However an analysis of options 5, 7 and 8 based on the Council's own scoring system indicates that option 8 overall performs the best. Option 8 refers to a new rural settlement and no appraisal has been undertaken specifically relating to Llandow new settlement. If it had been undertaken either under option 8 or in combination with option 5 then this would score even higher. It is considered that the Council should undertake an assessment which combines option 5 with Llandow or option 8 specifically relating to Llandow new settlement rather than a new rural settlement.

We have undertaken our own assessment which combines option 5 with Llandow or option 8 specifically relating to Llandow new settlement. This assessment is attached and is compared with Options 5 and 8. The combination of option 5 (or option 8) and Llandow does not only score higher than option 8 but also considerably higher than option 5 which is the Council's Draft Preferred Strategy. The combination of option 5 or 8 with Llandow has the strongest performance when measured against the 15 sustainability appraisal objectives. We request that our assessment is validated by the Council's consultant, Hyder (the costs incurred will be paid for by Barratt and Persimmon).

Paragraph 8.6.3 states that the benefits of option 8 would be more limited as the majority of development may be focused on the new settlement. We do not consider this to be the case in respect of the proposals for Llandow new settlement. The proposal that has been submitted for Llandow is for 2750 dwellings. When this matter was discussed at the stakeholders workshop the assumptions that were made was that a new settlement would be of a much larger scale and would take up to 80 – 90% of the housing requirement. This is not the case with regard to Llandow. On the basis of the dwelling requirement of 7500, Llandow would take up to 37% of the requirement and on the basis of the proposed 11000 dwellings, Llandow would take up 25% of the housing requirement. The assertion in paragraph 8.6.3 therefore that the benefits of option 8 would be more limited, as the majority of development may be focused on the new settlement cannot be substantiated.

## 8.7 Consideration of other plans, policies and programmes in determining the Preferred Option.

Paragraph 8.7.2 claims that the proposal for a new rural settlement would be contrary to the advice contained within Planning Policy Wales and reference is made to paragraph 9.2.3 of PPW. The housing section of PPW was revised by the Ministerial Interim Planning Policy Statement 02/2006 in June 2006 and the correct reference is therefore paragraph 9.2.7 of the Ministerial Interim Planning Policy Statement 01/2006 which now precedes the search sequence identified in paragraph 9.2.8.

The development of a new settlement at Llandow does not conflict with PPW. PPW advises that the search sequence should be: the re-use of previously developed land and buildings within settlements, then settlement extensions and then new development around settlements with good public transport links; and that a new settlement (on a Greenfield site) would need particular justification. This advice is clearly focussed on Greenfield sites. Sustainable development means choosing sites where previous development has occurred as well as choosing sites which can with present and / or improved infrastructure help to reduce the need to travel, or to travel as far by car. Llandow is substantially a Brownfield site, it is in a sustainable location adjacent to a railway line and will provide a sustainable mixed-use development. It will not compete with regeneration in Barry and other towns in the Vale and would offer significant advantages over the expansion of existing town and villages. Therefore it does not conflict with PPW.

Paragraph 8.7.3 repeats the concern that a new settlement would potentially detract or limit opportunities for regeneration in areas such as Barry and the re-use of existing Brownfield sites within existing settlements. Reference is made to a recent research document, "Best Practice in Urban Extensions and New Settlements" which states that a new settlement to be sustainable should be a minimum of 4000 – 5000 dwellings, as this is the minimum size of settlement to support a secondary school. This report includes 7 case studies, five of which are urban extensions and two are for new settlements. One of the new settlement case studies is of Dickens Heath, Solihull, which contains 1672 units (no secondary school), local shops, medical facilities other community facilities and a new primary school. The report states that a sense of community cohesion has been established as borne out in a range of retail, restaurants and commercial uses in the village centre. The comprehensive school at Solihull is three miles from the new settlement and as such is a similar situation to Llandow where the nearest comprehensive schools are only 2 – 3 miles away at Llantwit Major and Cowbridge. Despite it not having a comprehensive school Dickens Heath is considered to be a successful development.

We would accept that a new settlement which is remote from other settlements would have to be of a minimum size of 4-5000 dwellings to be sustainable. However, this is not the case with Llandow which is in a public transport corridor, adjacent to a railway line and is in close proximity to Cowbridge and Llantwit Major which have comprehensive schools.

Prior to the submission of Llandow as a Candidate Site, discussions also took place with the Vale of Glamorgan's Education Department who informed us that in the event that Llandow were to proceed a secondary school was not required as it was intended to focus attention on the rebuilding and reinvestment in Llantwit Major and Cowbridge comprehensive schools. These considerations have been taken into account in drawing up the proposals for Llandow and it is accepted that significant contributions would have to be made to Llantwit Major and Cowbridge comprehensive schools for further investment.

We therefore do not consider that it is necessary for Llandow to be a minimum of 4-5000 dwellings and that the proposal at Llandow for 2750 dwellings would provide a sustainable development. This was recognised in the Report of Consultations of the Stakeholder Workshop produced by Hyder in Para 2.5.8 which states " At Llandow .....there is already an existing employment base which requires an improved transport network ....would result in a sustainable community where there is already a demand for such improvements". The concern therefore that is expressed in paragraph 8.7.3 that a new settlement of 4-5000 dwellings would not allow the Council to address economic and social issues elsewhere in the Vale is unfounded. The redevelopment of Llandow is not to be seen as being in competition with opportunities for regeneration in Barry and the other towns in the Vale. As is recognised by the Council the opportunities for regeneration in the towns of the Vale of Glamorgan are depleting and

will continue to do so. The major regeneration initiative in the Vale of Glamorgan is the Barry Waterfront which has already been acquired by national house builders who are committed to the scheme and it is likely that a significant element of the scheme will be completed prior to the implementation of the Llandow new settlement. Owing to the declining availability of Brownfield sites within the Vale, if Llandow is not allocated in the LDP then the alternative choice the Council have will be to allocate additional Greenfield extensions to the towns and villages. These sites will be entirely Greenfield, may be in special landscape areas and could increase the potential for coalescence of main settlements. If Llandow new settlement were to be allocated then there would be less of a requirement to allocate urban extensions.

Paragraphs 8.7.6 and 8.7.7 include the potential positive and negative effects of the Draft Preferred Strategy Option 5. All of the potential positive effects would equally apply to the combination of Option 5 (or Option 8) with Llandow new settlement. However, the potential negative effects in paragraph 8.7.7 would be reduced in the combination of Option 5 (or Option 8) with Llandow. Option 5 will inevitably lead to the release of some Greenfield sites on the edges of key, primary, secondary and minor towns and villages identified in the Draft Preferred Strategy. As the potential negative effects recognise many of the towns and villages are surrounded by Special Landscape Areas or are in close proximity to the coastline or SSSIs which will therefore restrict the potential for many settlements to expand. If Llandow New Settlement were to be included then the potential negative effects would be reduced.

Paragraph 8.8.2 recognises that the Draft Preferred Strategy would have the potential to positively meet the SA objectives for the urban south east but this may not be the case within the rural Vale. The paragraph states by way of example that the objective to provide a diverse range of local job opportunities may be greatest achieved in urban areas where existing employment land opportunities exist but this would be difficult in rural areas. However this is not the case if Llandow New Settlement were included as the proposal would provide the infrastructure to develop the additional employment land at Llandow which will not occur without the development.

Table 9 identifies the negative effects associated with the Preferred Option. All three of the identified negative effects would be reduced if Llandow settlement were included with Option 5 or Option 8. Table 9 recognises that a number of settlements are located in Special Landscape Areas, near to the coastline and SSSI's which means that there are constraints to their expansion. Llandow would reduce the need to expand these towns and villages. Similarly the development of Llandow new settlement would contribute to protecting, enhancing and promoting the quality and character of the Vale of Glamorgan's character and heritage by helping to protect the character and setting of its towns and villages.

---

---

#### Officer Response:

In developing the Draft Preferred Strategy, the Council initially developed and examined 6 spatial options (options 1, 2a, 2b, 3, 4 and 5). A rural new settlement able to promote sustainable self containment was considered as part of this process (option 4 refers). The 6 options were discussed at a stakeholder workshop and a further 3 hybrid options developed. Two of these additional options incorporated option 4 (option 6 and option 8). All of the options were subject to a Sustainability Appraisal (SA) contained within the Initial SA report. Although it is accepted that the new settlement identified in options 4, 6 and 8 was not site specific, the SA highlighted that some of the likely effects of developing a new settlement would depend on the location.

Llandow Newydd has previously been submitted as a candidate site as part of the LDP process. All candidate sites will be assessed in due course in accordance with the Council's candidate site assessment methodology. However, to fully respond to your ISA representation, the Council has undertaken its own SA of this strategic site in conjunction with option 5 (option 8a refers) which has been reviewed by an independent SA consultant. This revised options appraisal will be available as part of the Draft Deposit Plan. Although similar to option 8, the appraisal of option 8a identified more mixed benefits and negative outcomes with the Rural Vale than option 8. However, common to both options, was the limited ability to address outcomes through mitigation due to the relationship between the location of a new settlement and the ability to provide equal benefits across the area, including reduced scope for new development opportunities to address issues where they exist. The main issues for Option 8a are considered below.

Option 8a would allow for development in the South East Zone where affordable housing need is highest, this being in common with the Draft Preferred Strategy. However, the provision of a new settlement could restrict the extent to which housing need is delivered in the South East Zone as a significant proportion of the potential housing would be directed to Llandow Newydd. Development within the South East Zone (as with the Draft Preferred Strategy) would also provide the opportunity to develop brownfield sites in sustainable locations. This would also assist in tackling the causes of deprivation in these areas.

Like the Draft Preferred Strategy this option could contribute to a reduction in commuting as there would be more employment and service opportunities in the South East Zone that are easily accessible by a range of public transport options. The Llandow Newydd proposal, however, would be more reliant on car based journeys to and from essential services, facilities and employment. Whilst a park and ride facility is proposed a rail service is not.

The Llandow Newydd candidate site is relatively centrally located within the rural Vale and would deliver a significant proportion of the Council's Housing Requirement. The concentration of a large number of units on one strategic site, albeit sited within the rural Vale, would not address housing needs where they occur, or where anticipated growth is required. This could be detrimental to the vitality and viability of smaller rural settlements. Such an option would not influence or tackle the issue of housing requirements and affordability in those rural settlements. Affordability is a key concern to stakeholders.

Access to services may be enhanced for settlements within close proximity to the proposed Llandow Newydd site. However it is anticipated that the extent of the facilities provided would be limited due to the scheme only proposing 2750 dwellings, thereby clearly not delivering a fully self sustaining community. It is generally accepted that for a new settlement to be sustainable, (i.e. support a sufficient range of services and facilities) it would have to be of between 4000 and 5000 dwellings (see Best Practice in Urban Extensions and New Settlements, TACPA 2007, and Eco Towns Prospectus Communities & Local Government 2007).

As stated above existing rural accessibility issues may not be addressed since levels of development in the rural Vale would be concentrated in one location. Therefore, in the rural Vale access to and from settlements to services, facilities and employment opportunities would fail to be adequately addressed.

It is extremely unlikely that existing employment opportunities available at the Llandow Estates will serve the needs of the proposed new resident population. The development of Llandow Newydd would therefore increase peak time commuting.

The development of Llandow Newydd would result in the loss of 51 hectares of good quality Grade 3a agricultural land and 36 hectares of Grade 3b agricultural land (as verified by Reading Agricultural Consultants on behalf of the Council). The remaining Llandow Estates are proposed to be retained in their current use. Indeed although your candidate site includes the current Llandow estates, those estates are uses that already exist at the site and are outside of your control. The Council has already indicated that the existing Llandow estate sites should not form part of your

proposals.

The Council's Draft Preferred Strategy seeks to realise limited beneficial development in and adjoining existing sustainable rural settlements. This will result in sustaining existing services and facilities in appropriate rural settlements whilst at the same time allowing limited but necessary growth in the rural Vale.

The Council notes your comments regarding the performance of options 5, 7, 8 and 8a against the SA framework. However, in selecting the DPS, the Council also needs to consider the merits of each option against the impact of other plans, policies and programmes e.g. Planning Policy Wales, Wales Spatial Plan and Community Strategy.

The creation of a new rural settlement under either option 8 or 8a is considered to be contrary to advice contained within PPW / MIPPS 01/2006 (paragraph 9.2.7 refers) and would undoubtedly offer more limited environmental, social and economic advantages over option 5. You also claim that if Llandow Newydd is allocated in the LDP, there would be less of a requirement to allocate urban extensions. Whilst this is likely to be the case, urban extensions accord with the search sequence referred to in PPW and are considered to be a more sustainable approach to development. The WAG have also offered advice to officers on this issue and state amongst other things that "new settlements should only be proposed where such development would offer significant environmental, social and economic advantages over the further expansion or regeneration of existing settlements."

A new settlement in the rural Vale is likely to limit or prejudice the delivery of urban regeneration opportunities and development of other sustainable sites within existing settlements already benefiting from existing services and facilities e.g. Barry Waterfront. Such an approach would as a consequence be contrary to the Council's Community Strategy.

Whilst SA is a valuable tool in predicting the various effects of the options, it is ultimately the Council's responsibility as the plan maker to decide on a preferred strategic option taking into account all of the evidence, before it and following a full consideration of all relevant material factors.

---

**Officer Recommends:** Officer Recommends Change

(i) Amend PPW reference in Paragraph 8.7.2 to 9.2.7 (MIPPS 01/2006).

(ii) Update section 8.7 to refer to SA of option 8a.

Rep Type: Objection

**Comment:**

Overall the SEA does not appear to fully consider the impact of the preferred LDP strategy on the Historic Environment, in particular in Table 9 it suggests that CSP10 will protect the historic environment even though CSP10 only refers to the historic qualities of individual buildings and conservation areas and not archaeological sites or other features of the historic environment. Our suggested amendments to CSP 1 provide the necessary protection.

**Officer Response:**

Agree. The appraisal of CSP 10 against SA objective 9 highlights that although CSP 10 seeks to protect the cultural and historic qualities of individual buildings and conservation areas no specific reference is made to the protections of archaeology and other cultural assets outside built up areas. Accordingly, it is proposed to amend policy CSP10 to read as follows:

CSP 10: Built and Natural Environment

The Vale of Glamorgan's natural and built environmental assets will be protected and enhanced through:

- The promotion of high quality design that reinforces the local character of settlements, enhances landscape settings and respects the cultural and historic qualities of individual buildings, conservation areas, archaeological sites or other features of the historic environment;
- Favouring opportunities for the creation, conservation or restoration of designated sites of national and local nature conservation interest.

**Officer Recommends:** Officer Recommends Change  
Amend CSP 10 bullet point 1

Page reference:

Para reference:

Rep Type: Comment

**Comment:**

We note that:

- The Council's Initial Sustainability Appraisal Report, December 2007' is also available for inspection and comment;

**Minerals**

Note the sustainability objective relating to minerals in Table 3. Safeguarding mineral resources with potential for extraction by future generations is an additional element that could have been included. Table 5 could also have included the impact of mineral operations.

**Biodiversity**

It may be useful to include future work reference to the Council's biodiversity duty resulting from the Natural Environment and Rural Communities Act 2006 (NERC Act)

**Officer Response:**

Your comments regarding minerals are noted. However, the safeguarding of mineral resources is considered to be the LDP mechanism for meeting the SA objective. Accordingly there will be an appropriately worded policy in the Deposit Plan. The key sustainability issues in table 5 were identified by relevant stakeholders and the impact of mineral operations was not highlighted.

In terms of biodiversity, the Council's Approved Scoping Report (July 2007) refers to the NERC Act 2006 in Appendix 1 - Review of Policies, plans and programmes. However, this reference was inadvertently omitted from table 3 in the ISA Report. Accordingly, it is recommended that the NERC Act reference is added to the table.

**Officer Recommends:** Officer Recommends Change.

Table 3, Biodiversity and habitat protection theme, add NERC Act to list of national key documents.

Rep Type: Comment

**Comment:**

Thank you for your letter of 11 January consulting Cadw on the above documents.

Cadw's comments on the Preferred Strategy are included in the Welsh Assembly Government's overall response. The comments are therefore limited to the Sustainability Report.

Page 15, Para 7.3.4

Although reference is made to the number of conservation areas there is little other reference to heritage assets. For information, our records show that there are:

107 Scheduled Ancient Monuments  
733 Listed Buildings  
18 Historic Parks and Gardens  
2 Historic Landscapes.

Given their scale, and the earlier reference to Heritage Coast and Special Landscape Area, it may be particularly pertinent to refer to the Registered Historic Landscapes of Special Historic Interest at Merthyr Mawr, Kenfig & Margam Burrows (HLW(MGI)1) and Llancarfan (HLW(SGI)1).

Page 17, Table 4

The section on 'Degradation of cultural heritage...' focuses overly, given the largely rural nature of the vale, on listed buildings and would benefit from wider acknowledgement of other designated sites. Possibly the second indent could be expanded to read "Listed Buildings, Scheduled Monuments and other historic assets are protected by legislation and planning policy (but does not encourage enhancement)."

The same applies to the section above on "Impact of new development..." where the third indent could also be expanded.

Page 27 Section 9, Environmental Assets

On 'Landscape Quality', reference should again be made to the natural and historic landscape, through reference to the Register of Historic Landscapes of Special Historic Interest in Wales. CCW will, no doubt, make further reference to this and possible indicators.

'Historic townscape' is not a defined indicator and further clarity on this is needed. The plan should, perhaps, define those towns which are considered to be included in Historic townscape, probably a small number. This would then also identify the settlements considered as villages, which are greater in number, and possibly subject to greater threats from development.

'Historic townscape', the indicator chosen is the [number of up to date] Conservation Area Appraisals, which is fine. The Preferred Strategy, however, uses the Buildings At Risk Register, which is sensible, and should also be used as an indicator in the SA.

'Historic townscape' – given the rural nature of the Vale there should be an indicator on the historic environment outside developed areas. One indicator might be the condition of monuments sourced from Cadw's Quinquennial Review of the Condition of Scheduled Ancient Monuments. An indicator assessing the number of historic parks and gardens affected by development proposals would also be appropriate.

'Number of new developments...' is a good indicator but Cadw is listed as a data source. I am not aware that Cadw holds such information. Again it could be linked to the council's Buildings at Risk Register.

Page 28, Section 11, Cultural Heritage

There is crossover with Section 9 and the same points apply, particularly with regard to the historic environment outside townscapes (scheduled and unscheduled archaeology and registered historic landscapes, parks and gardens).

**Officer Response:**

Page 15 paragraph 7.3.4

The lack of reference to heritage assets in paragraph 7.3.4 is noted. It is therefore proposed to amend the relevant section of paragraph 7.3.4 and also update paragraph 3.7 in the Approved Scoping Report. The Council's records show that there are more scheduled ancient monuments and listed buildings in the Vale than stated in your representation and these figures are reflected in the amendments to both documents. In addition, the Council is currently undertaking a review of all its conservation areas and the number may therefore change in due course. For this reason the word "Presently" has been introduced in the revised text.

Amend paragraph 7.3.4 to read:

"The Vale of Glamorgan benefits ...

....Around half of the Vale's coastline falls within the designated Glamorgan Heritage Coast and a vast area of the authority has been designated as Special Landscape Area. In addition, there are 18 historic parks and gardens and 2 registered historic landscapes of special historic interest. In terms of built heritage, the Vale has 127 scheduled monuments, 738 listed buildings, and a list of locally important buildings and structures. Presently, there are 38 conservation areas, including one in Penarth which is afforded special protection under Article 4 of the Town and Country Planning (General Permitted Development) Order 1995. The abundance ..."

Page 17 Table 4

Agree.

Amend second bullet point for Degradation of cultural heritage and historic environment to read as follows:

•"Listed Buildings, Scheduled Monuments and other historic assets are protected by legislation and planning policy (but does not encourage enhancement)."

Amend second bullet point for Impact of new development on built and natural environment to read as follows:

•"Habitats, biodiversity, listed buildings, scheduled monuments and other historic assets are protected by other legislation (but does not encourage enhancement)."

Page 27 Section 9 Environmental Assets

---

Agree. Add Register of historic landscapes of special historic interest as an additional data source to landscape quality indicator.

It is accepted that further clarity is needed on the historic townscape indicator. However, instead of listing the towns and villages considered to be included in the historic townscape it is proposed to amend the indicator to read as follows: "Condition of conservation areas, listed buildings, scheduled ancient monuments and historic parks and gardens."

Agree. Add buildings at risk register as an additional data source to historic townscape indicator.

Agree but no further change required to historic townscape indicator as it makes reference to both scheduled ancient monuments and historic parks and gardens.

Comments regarding the data sources for the "number of new developments ..." indicator are noted. Delete reference to CADW in the data source and add VOGC buildings at risk register.

Comments in respect of cultural heritage and historic environment are accepted. Amend historic townscape indicator to read: "Condition of conservation areas, listed buildings, scheduled ancient monuments and historic parks and gardens."

Add buildings at risk register as an additional data source to historic townscape indicator.

---

**Officer Recommends:**

Officer Recommends Change.

# 1. INTRODUCTION

- 1.1 To ensure that the policies in the Local Development Plan (LDP) promote the principles of sustainable development, a Sustainability Appraisal (SA) of the LDP, incorporating the requirements of the Strategic Environmental Assessment (SEA) Directive, is being undertaken. The LDP and the SA processes are being carried out in an iterative and integrated manner. Figure 1.1. below outlines these two processes.

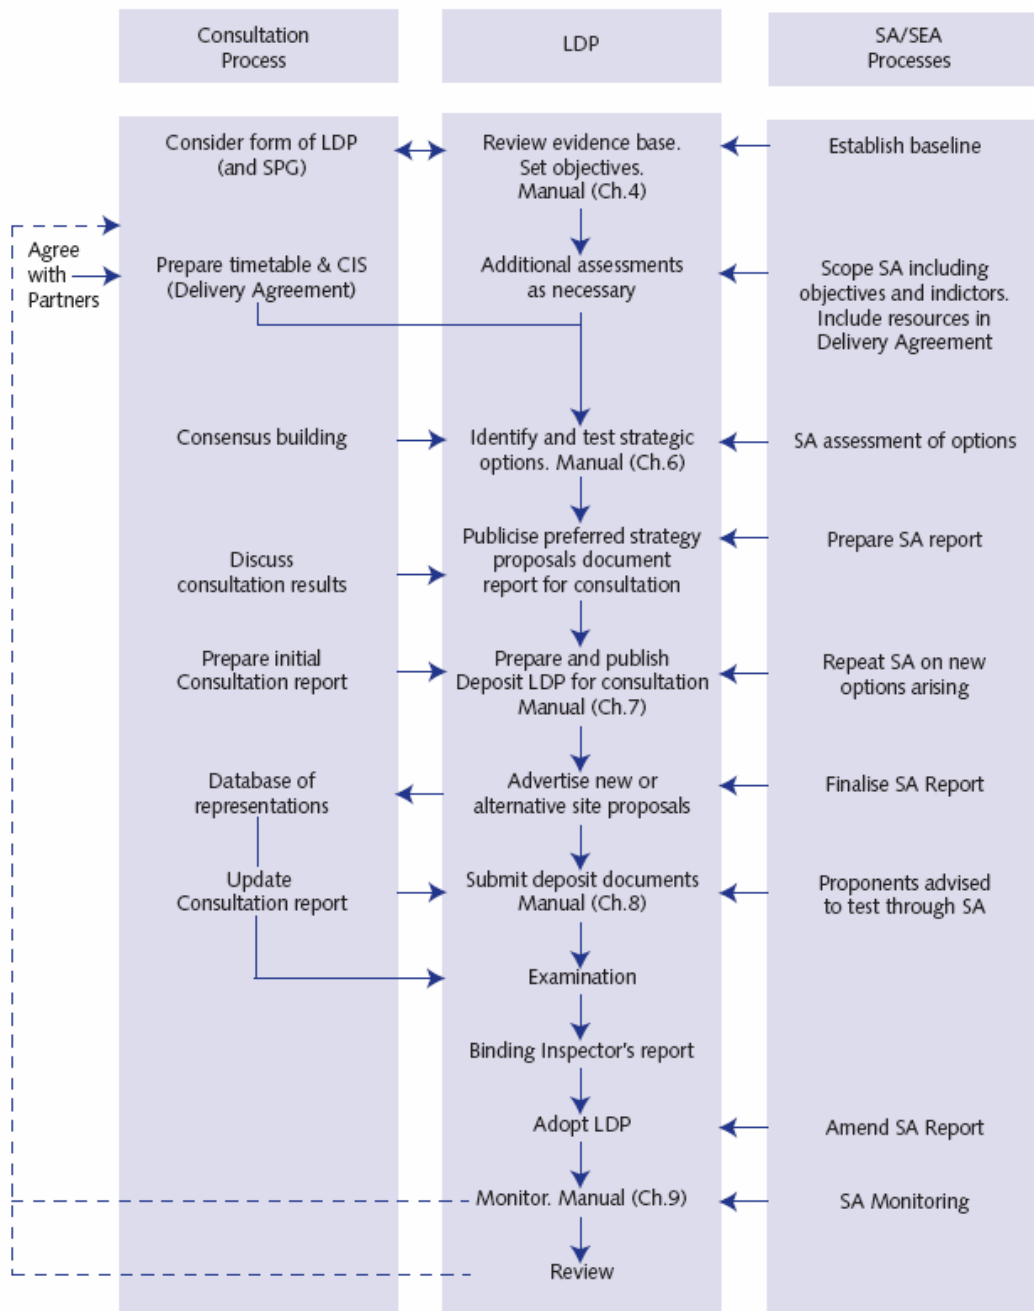

Figure 1: Main stages of the LDP and SA Processes (Source: LDP Manual, June 2006)

1.2 The SA of the LDP is being carried out in accordance with current guidance and best practice including:

- *Local Development Plan Manual*, Welsh Assembly Government, June 2006
- *A practical Guide to the SEA Directive*, ODPM, the Scottish Executive, the Welsh Assembly Government and the Northern Ireland Department of the Environment, September 2005
- *Sustainability Appraisal of Regional Spatial Strategies and Local Development Frameworks*, ODPM, November 2005

1.3 The ODPM SA guidance sets out the SA stages as follows:

- Stage A: Setting the context and objectives, establishing the baseline and deciding on the scope
- Stage B: Developing and refining the options and assessing the effects
- Stage C: Preparing the SA report
- Stage D: Consulting on the draft Regional Spatial Strategy (RSS) revision and the SA report
- Stage E: Monitoring the significant effects of implementing the RSS vision

1.4 European Community Directive 92/43/EEC on the Conservation of Natural Habitats and of Wild Fauna and Flora (also known as the European Community Habitats Directive) requires any plans that may have an impact on European designated sites to undergo an appropriate assessment. The purpose of appropriate assessment is to assess whether the plan proposals would have any significant adverse effects on such sites. Where adverse effects are identified, the Council must consider whether there are alternative solutions and / or appropriate mitigation and compensation. To date, the Council has published an appropriate assessment screening report (December 2007) which identifies international sites within or in close proximity of the Vale of Glamorgan. The report concludes that the LDP Draft Preferred Strategy could have a negative impact on 2 of the 6 European sites identified within or in close proximity to the Vale of Glamorgan, namely the Severn Estuary SPA / cSAC / RAMSAR and the Kenfig SAC sites. In view of this, the report recommends that an appropriate assessment is undertaken to fully ascertain the effect of the LDP on the integrity of the sites identified.

1.5 In January and February 2008, the Council formally consulted on its LDP Draft Preferred Strategy, which sets out the Council's strategic priorities for development between 2011 and 2026. The identification of the Draft Preferred Strategy initially involved the consideration of 9 alternative spatial strategy options that could provide the direction for future development within the Vale of Glamorgan over the LDP period. These spatial options were subject to a SA incorporating the requirements of the SEA Directive. The assessment and development of the preferred options forms stage B of the SA process set out in the ODPM SA guidance. The findings of the SA were incorporated into an Initial Sustainability Appraisal (ISA) Report (December 2007), which also included a SA of the LDP vision and core strategic policies.

- 1.6 As a result of the public consultation on the ISA report, a further spatial strategy option (option 8a) was presented as an alternative to the Council's draft preferred strategy (option 5). The Council also received independent expert advice from SA consultant Riki Therivel, and subsequently refined the SA methodology to provide further insight into the sustainability of each option. Accordingly, this report includes a re-assessment of the original 9 options together with an assessment of a new option (8a) presented to the Council for consideration using the revised SA methodology.

## 2. SPATIAL OPTIONS

2.1 The strategy options considered within this report represent alternative scenarios within which future land uses could be directed.

- **Option 1:** Maximising the potential of and concentrating growth in Barry, Penarth, Dinas Powys, Sully and Rhoose (current UDP strategy – ‘business as usual’).
- **Option 2a:** Dispersal of housing and employment opportunities based on the current population of each settlement (without a sustainability test).
- **Option 2b:** Dispersal of housing and employment opportunities based on the current population of each settlement (with a sustainability test).
- **Option 3:** Higher growth in the larger villages in rural areas (e.g. Llantwit Major, Cowbridge, St. Athan, Rhoose and potentially others to be identified).
- **Option 4:** A rural new settlement able to promote sustainable self – containment.
- **Option 5:** Concentrate development opportunities in Barry and the South East Zone. The St. Athan area to be a key development opportunity. Other sustainable settlements to accommodate further housing and associated development.
- **Option 6:** (Combination of Options 1 and 4): Maximising the potential of and concentrating growth in Barry, Penarth, Dinas Powys, Sully and Rhoose (current UDP strategy) as well as developing a new rural settlement to promote sustainable self-containment
- **Option 7:** (Combination of Options 2b and 5): Concentrate development opportunities in Barry and the South East Zone. The St. Athan area to be a key development opportunity. Other sustainable settlements to accommodate further housing and associated development based on a sustainability test.
- **Option 8:** (Combination of Options 5 and 4): Concentrate development opportunities in Barry and the South East Zone. The St. Athan area to be a key development opportunity. Other sustainable settlements (including a new rural settlement) to accommodate further housing and associated development.
- Details of this workshop are provided in *Strategic Options Stakeholder Workshop: Report of Consultation* (June 2007)<sup>1</sup>.
- **As a result of public consultation: Option 8a:** (Combination of option 5 and a new rural settlement at Llandow): Concentrate development opportunities in Barry and the South East Zone. The St. Athan area to be a key development opportunity. Other sustainable settlements (including a new rural settlement at Llandow known as Llandow Newydd) to accommodate further housing and associated development.

2.2 The appraisal of the spatial options is based on the SA framework developed at the scoping stage<sup>2</sup> which identified key baseline information relevant to the Vale of Glamorgan. Additional qualitative information was identified by key stakeholders at a dedicated Sustainability Appraisal workshop undertaken in October 2006<sup>3</sup>. The stakeholder workshop highlighted that the key issues in the Vale of Glamorgan include (but are not limited to):

- Transport and accessibility;
- Employment related issues;
- Housing provision, especially affordable housing;
- Increasing development pressures;
- Community cohesion;
- Waste disposal and pollution; and
- Threats to cultural and natural heritage.

In carrying out the appraisal, consideration was also given to comments made by stakeholders at a Strategic Options workshop held in May 2007<sup>4</sup>. This report outlines the findings of the appraisal of the 10 options set out above and provides recommendations for the LDP strategy.

## 3. APPRAISAL METHODOLOGY

This section outlines how the SA framework was used to appraise the options, the assumptions made in carrying out the appraisal as well as the limitations identified in the process.

### 3.1 SUSTAINABILITY APPRAISAL FRAMEWORK

3.1.1 The SA framework is the fundamental component of the appraisal methodology. The SA objectives form the basis of this methodology and have been used as methodological yardsticks against which the strategy options have been assessed. The SA objectives are supported by aims which guide the appraisal of the options.

3.1.2 The methodology used in the derivation of the SA objectives and development of the aims was developed from the ODPM SA guidance. The SA objectives and aims, detailed in the LDP SA Scoping Report (July 2007) were informed by the sustainability objectives of other relevant plans and programmes that may influence, or be influenced by, the plan; as well as the key issues identified through baseline data collection and consultation undertaken by the Council at key stakeholder workshops. The SA objectives (in bold font) and aims used in this appraisal are set out below. It should be noted that these have been numbered for ease of reference and are not in any order of priority.

#### 1. To provide the opportunity for people to meet their housing needs.

- Provide a mix of dwelling types and tenure
- Build in sustainable locations, with good access to local facilities
- Provide affordable housing
- Preference for previously developed land in sustainable locations

#### 2. To maintain, promote and enhance the range of local facilities.

- Meet the needs of existing communities throughout the Vale of Glamorgan
- Provide appropriate facilities within new developments to meet the needs of future users
- Ensure local facilities are suitable for purpose and easily accessible
- Prevent the loss of existing well-used and valued local facilities

#### 3. To maintain and improve access for all.

- Ensure the built and natural environment is easily accessible to all the Vale's community
- Improve public perception of access
- Benefit health and well being through social inclusion within the physical environment

- Promote 'life-time' homes

#### **4. Reduce the causes of deprivation.**

- Promote improvements to: employment, income, health and well being, education, housing, environment and access, for all.
- Prevent the isolation of deprived communities.

#### **5. To maintain, protect and enhance community spirit.**

- Reduce the fear of crime
- Provide community facilities
- Encourage local distinctiveness (e.g. development having regard to its context and public art)
- Encourage community ownership of the environment (e.g. promote shared spaces, good design)

#### **6. To minimise the causes and manage the effects of climate change.**

- Reduce air pollution (e.g. transport / industry emissions)
- Reduce energy consumption (e.g. promote energy efficient building)
- Promote renewable energy generation
- Reduce flood risk to people, property and maintain the integrity of floodplains
- Protect biodiversity, flora and fauna from the effects of climate change
- Protect and promote the development of carbon sinks

#### **7. To minimise waste.**

- Promote the use of secondary resources (e.g. convert existing buildings/reuse materials)
- Provide and promote recycling facilities.
- Avoid landfill of waste

#### **8. To use land effectively and efficiently.**

- Retain greenfield land
- Bring previously developed land in sustainable locations back into use
- Promote good quality high density developments where appropriate and having regard to the local context
- Protect the countryside from inappropriate development, especially the best and most versatile agricultural land and areas of high landscape value

- Restore contaminated land to beneficial use

**9. To protect and enhance the built and natural environment.**

- Protect or enhance natural assets such as biodiversity, flora and fauna, wildlife habitats, landscape, soil
- Improve and protect the quality and quantity on inland and coastal water resources
- Protect or enhance the built environment including historic buildings and conservation areas.
- Protect cultural heritage and archaeology.
- Enhance public access to and appreciation of the Vale of Glamorgan's environmental assets.

**10. To provide a high quality environment within all new developments.**

- Ensure development meets the needs of current and future users.
- Promote a sense of community pride (e.g. shared spaces, public art, local materials)
- Promote sustainable design and construction solutions.
- Enhance access for cyclists and pedestrians.
- Provide adequate green spaces.
- Provide adequate vehicular parking and manoeuvring space.

**11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage.**

- Protect and enhance existing cultural heritage and historic environments
- Promote new opportunities for culture in the Vale of Glamorgan

**12. To reduce the need to travel and enable the use of more sustainable modes of transport.**

- Ensure new development is located in accessible locations from a range of travel modes
- Promote technologies to reduce need to travel (e.g. home working)
- Enable the movement of people and freight by sustainable means
- Provide effective transport infrastructure to meet the needs of the community (e.g. highways, cycleways, pedestrian provision, public rights of way)

**13. To provide for a diverse range of local job opportunities.**

- Protect existing and potential employment sites for employment uses

- Support a culture of entrepreneurship
- Encourage a range of employment sites in locations accessible by a range of transport modes.
- Support the enhancement of skills to meet employment needs
- Promote and enable sustainable rural diversification

**14. To maintain and enhance the vitality and viability of the Vale of Glamorgan's town, district and local centres.**

- Ensure retail centres are accessible by a range of modes of transport
- Ensure a range of uses within retail centres
- Avoid out-of-town retail development
- Enhance the public realm within existing centres and facilitate regeneration programmes
- Promote the evening economy in the Vale of Glamorgan's town centres

**15. To promote appropriate tourism.**

- Promote local economic growth through tourism
- Enable tourism uses to be accessed by sustainable travel modes
- Manage tourism to protect the Vale of Glamorgan's natural and built assets
- Protect potential tourism destinations against inappropriate non-tourism development (e.g. proliferation of residential)
- Enable specialist tourism (e.g. sustainable, sports, cultural etc).

3.1.3 The appraisal of the options against the SA objectives was carried out using the modified matrix-based approach shown in Appendix A. The matrix was based on ODPM SA guidance<sup>5</sup> and has been designed to enable the comparison of the options. The matrix also ensures that spatial nature of effects is taken into consideration together with the significance of the identified effects. The performance (direction and severity) of the options against the SA objectives is recorded in the matrix using the symbols shown below:

|     |  |
|-----|--|
| ++  | The proposed option strongly contributes to the achievement of the SA objective  |
| +   | The proposed option contributes to the achievement of the SA objective   |
| 0   | There is no clear relationship between the achievement of the option and the SA objective or the relationship is negligible                            |
| -   | The proposed option detracts from the achievement of the SA objective  |
| --  | The proposed option strongly detracts from the achievement of the SA objective   |
| +/- | The proposed option both contributes and detracts from the achievement of the SA objective   |
| ?   | The relationship is dependant on the way in which the aspect is managed. Sufficient information may be unavailable to enable an assessment to be made. |

3.1.4 The commentary provided under each SA objective in the matrix sets out the reasoning behind the determined performance of the options and highlights any key issues associated with the option.

3.1.5 In addition to the above, the methodology now also provides an indication of the negative and positive benefits over the plan period in the short, medium and long term measured in 5 year periods up to 15 years to reflect the time scale of the plan. A description is provided below of the approach to this appraisal using the matrix.

---

<sup>5</sup> Annex 10 of the *Sustainability Appraisal of Regional Spatial Strategies and Local Development Frameworks*, ODPM, November 2005

## 3.2 APPROACH TO THE APPRAISAL

3.2.1 Although the options have not been appraised against each individual aim, the aims have been taken into consideration in determining the performance of the options against the overall objectives and have been used to guide the appraisal. The various aspects considered while carrying out the appraisal are as follows (NB: italic font indicates where original methodology has been refined):

- **Direction of impact:** Whether the effects are positive, negative or neutral.
- **Significance:** Whether the effects would be slightly or greatly significant in relation to the SA objectives.
- **Spatial Scale:** Since the LDP will seek to address issues either common to the Vale or those that exist in a discrete area, the appraisal considers the locality of the effects in the Vale of Glamorgan i.e. whether they would affect the rural and/or urban areas or both. In addition, any potential trans-boundary effects outside the study area were also considered.
- **Level of certainty:** The level of certainty in predicting the effects based on the information available to carry out the appraisal.
- **Temporal:** *Whether the option would have a positive, neutral or negative effect in the short, medium or long-term. This aspect is measured in 5 year intervals to reflect the 15 year plan period*
- **Secondary, Synergistic and Cumulative impacts (positive or negative):**
  - (i) **Secondary effects** *are indirect effects, for example health effects of air pollution as a result of increased road transport.*
  - (ii) **Synergistic effects** *are those which relate to the outcome of a number of objectives that interact to produce a total effect greater than the sum of the individual effects. For example improved access to services, affordable housing and built environment together would result in enhancing community spirit.*
  - (iii) **Cumulative effects** *are the overall effect of each option against the SA objectives, and include secondary and synergistic effects.*
- **Mitigation-** *The identification of potential intervention measures that may assist in reducing negative impacts or enhancing outcomes in support of the SA objectives. In most instances this involves recommendations for issues that need to be addressed through planning policies contained within the LDP.*

## 3.3 ASSUMPTIONS AND LIMITATIONS

3.3.1 The rationale behind the determination of the performance of the options against the SA objectives sought to relate direction of impact to the value of baseline data in the Vale of Glamorgan. In adopting this approach, every option is considered on its own merit against the SA objectives as well as the key issues and opportunities.

3.3.2 In carrying out the assessment, a number of assumptions were made in relation to the strategy options. Furthermore, in some cases, there were limitations to the level of certainty with which the appraisal could be completed.

### 3.4 ASSUMPTIONS

3.4.1 In determining the potential outcomes of each option against the sustainability objectives identified, the following assumptions have been made:

- The LDP will seek to meet national and international sustainability targets at a local level and assist other plans, programmes and policies identified through the scoping report, where these can be directly influenced by the planning system. For example, ensuring that development reduces impacts on climate change which can be mitigated against through locational policies, but is also influenced by activities outside of the Vale and in some instances influences outside of the planning system.
- Legislation would provide the necessary protection for designations of national and international importance. Nevertheless, the impact that locational policies within the plan may have on these designations is considered.
- The scale of development will be determined by population and employment land projections.
- Options for a new rural settlement (except for Llandow Newydd as contained in Option 8a) would consist of between 4000 and 5000 dwellings.<sup>6</sup>

### 3.5 LIMITATIONS

3.5.1 At this stage, the appraisal provides an overall indication of the potential effects of the options against the SA objectives. The assessment has been based on the expert opinion of consultants, supplemented by professional input from planners and key stakeholders. It also draws on the baseline data and analysis of key sustainability issues identified at the scoping stage of the SEA process, as well as relevant background studies undertaken for the LDP.

3.5.2 The reason for undertaking this primarily qualitative approach (based on opinion rather than data) is due to the difficulty in obtaining technical data to quantify the effects of the options and the cost and practical difficulties of collating this data at a local level. The uncertainties inherent in appraising a strategic plan of this nature mean that it is difficult to quantify the majority of the potential effects.

3.5.3 However, the level of detail is considered sufficient for the purposes of developing the Draft Preferred Strategy, with the overall effect on sustainability of the chosen option being evaluated in greater depth through the assessment of the options in combination with the LDP vision, strategic objectives and policies as well as baseline evidence data.

---

<sup>6</sup> Best Practice in Urban Extensions and New Settlements, Town & Country Planning Association (March 2007) suggest that new settlements should contain a minimum 4-5 thousand dwellings in order to support sufficient levels of services and facilities (paragraph 8.4.5 refers)

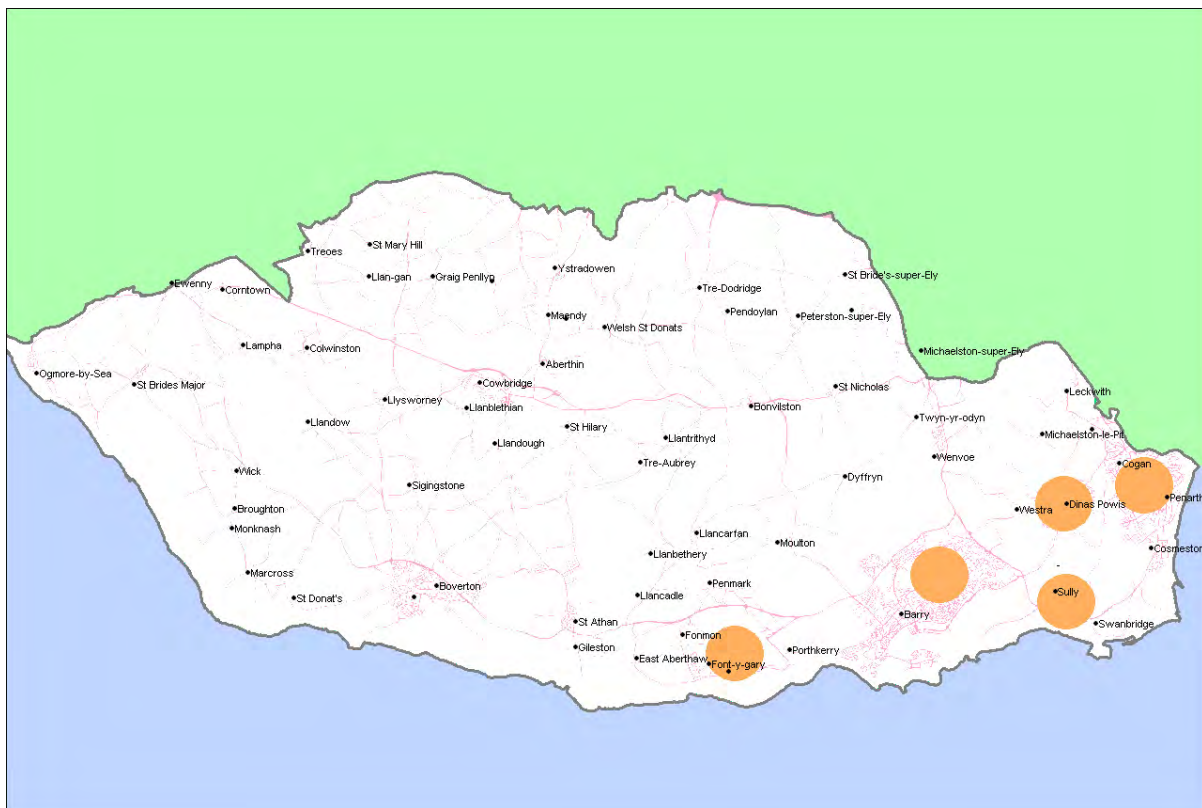

## 4. SA FINDINGS

4.1. The SA of the various strategy options is contained in Appendix A of this report. It features illustrative tables that produce an indicative statement as to whether or not the strategy option would contribute towards the sustainability objectives or potentially detract from them. It also provides comments on the possible mitigation measures for each SA objective.

4.2 This section summarises the findings of each option appraisal taking into consideration the key issues identified at the scoping stage. The key strengths and weaknesses of each option are highlighted below together with appropriate maps illustrating how the dispersal of development would look.

**Option 1**  
**Maximising the potential of and concentrating growth in Barry, Penarth, Dinas Powys, Sully and Rhoose (current UDP strategy).**

4.3 This option maintains the current strategy contained within the Vale of Glamorgan Adopted Unitary Development Plan (1996-2011), which focuses development within ‘the Waterfront Strip’. This encompasses the larger coastal towns and villages of Barry, Penarth, Dinas Powys, Sully and Rhoose, capitalising on their good transport links, availability of services and facilities as well as regeneration opportunities within Barry Waterfront (see Figure 2). This option represents the ‘business as usual’ scenario.

**Figure 2: Indicative Illustration of Option 1**

### Key Strengths

- 4.4 One of the key strengths of this option is that it would assist in the achievement of the majority of the SA objectives in the urban south east part of the Vale of Glamorgan. The concentration of development within the settlements of Barry, Penarth, Dinas Powys, Sully and Rhoose would provide opportunities for securing affordable housing in areas where the Council's Local Housing Market Assessment has identified the greatest need. This would assist the Vale of Glamorgan population in meeting their housing needs.
- 4.5 Similarly, growth opportunities within Barry would provide opportunities for addressing issues associated with social, economic and environmental deprivation which is prevalent in a number of wards. This option would also ensure that existing local services and facilities in the south east are maintained and enhanced.
- 4.6 New development in these areas would be easily accessible by existing good rail and bus transport links, which would also assist in addressing economic disparities, and contribute towards reducing the need to travel, resulting in a positive contribution towards climate change. Opportunities for redeveloping brownfield sites and re-using existing buildings within larger urban settlements would be maximised and would also assist in the continued regeneration of areas such as Barry. This would also allow underused employment land, identified within the Council's employment land study to be utilised, therefore addressing demand for premises within the area. However, it was recognised that the availability of brownfield sites would diminish over the plan period.
- 4.7 The concentration of development within urban areas would provide an element of protection to landscapes and habitats, as well as the historic environment within the rural vale. However, this option could have a detrimental effect on the built and historic environment found within the urban settlements.

### Key Weaknesses

- 4.8 The appraisal indicated that whilst there would be some opportunities for addressing housing needs within the rural Vale, this would be focused primarily within the larger rural settlements, therefore limiting the plan's ability to address local housing needs where they occur.
- 4.9 Similarly, opportunities for improving access to services and facilities would be limited, and whilst deprivation has not been identified as a key issue, poor access is recognised as a limiting factor within the rural vale.
- 4.10 However, for urban areas, development opportunities could also be constrained, since the option would be a continuation of the existing UDP strategy that has been successful in the delivery of major housing developments and therefore further development could have a detrimental affect in these settlements. Similar levels of development may not be achievable or could be detrimental to the area in terms of impacts on the urban environment and also on community spirit.

**Option 2a**  
**Dispersal of housing and employment opportunities based on the current population of each settlement (without a sustainability test).**

4.11 This option would see the distribution of housing and employment in all settlements within the Vale of Glamorgan, proportionate to the size of the existing population of each settlement. In this scenario the level of existing services and facilities would not be considered as part of the allocation of sites. However, unlike Option 1 this option would increase development opportunities in rural areas (see Figure 3).

**Figure 3: Indicative Illustration of Option 2a**

**Key Strengths**

4.12 This option offers the opportunity to deliver benefits in both urban and rural areas, particularly in relation to the provision of housing and employment opportunities. It is anticipated that multiple deprivation issues, particularly in urban areas, would be addressed through this option.

4.13 There are opportunities to make town centres attractive to local residents that currently use out-of-town facilities. Town centres can also be made attractive to businesses therefore reducing the number of vacant units in locations such as Barry. Both of these factors would assist in maintaining and enhancing the vitality and viability of existing centres.

## Key Weaknesses

- 4.14 One of the key weaknesses identified with this option was its dependence on the current population of each settlement which may not be an appropriate indicator of the future needs of these communities. Consequently, development may not be targeted to those areas where social and economic issues are prevalent e.g. the need to address affordable housing.
- 4.15 Similarly, there is a risk that development may be provided within the smaller settlements where local services and facilities are limited, and the scale of development may not justify the use of planning obligations to secure the provision of new facilities. As a result, the specific needs of some communities may not be addressed, and could be exacerbated. Furthermore, due to the dispersed nature of proposed growth, resources to ensure benefits are sufficiently delivered may be stretched, while negative effects may be spread out across the Vale of Glamorgan.
- 4.16 In rural areas, where brownfield land is not as readily available, there may be some loss of greenfield land and negative effects on the local landscape, biodiversity, soil function, water resource use and cultural heritage. It would therefore be necessary to limit growth to within settlement boundaries to ensure protection of the surrounding countryside.

**Option 2b**  
Dispersal of housing and employment opportunities based on the current population of each settlement (with a sustainability test)

4.17 As with option 2a the distribution of development would be relative to the existing population of each settlement. However an assessment of existing services and facilities as well as accessibility to nearby facilities would be undertaken (the sustainability test). In this scenario land allocated for development opportunities would only be within those settlements which have good levels of services, facilities and infrastructure (see Figure 4).

Figure 4: Indicative Illustration of Option 2b

**Key Strengths**

4.18 As with Option 2a, this strategy would spread development throughout the Vale of Glamorgan, although growth would be focused in those settlements that have a sufficient of facilities to support additional development. This would be established through the undertaking of a sustainability appraisal and would therefore ensure that existing facilities and services are maintained and enhanced.

4.19 Areas with relatively high levels of multiple deprivation are mainly concentrated in and around Barry. Provision of housing would be focused on larger urban settlements such as Barry, presenting opportunities to reduce the causes of deprivation. New housing development provides scope to enhance facilities through planning conditions and S106

agreements. In addition, growth in sustainable settlements will result in a greater proportion of the population having improved access to services and facilities.

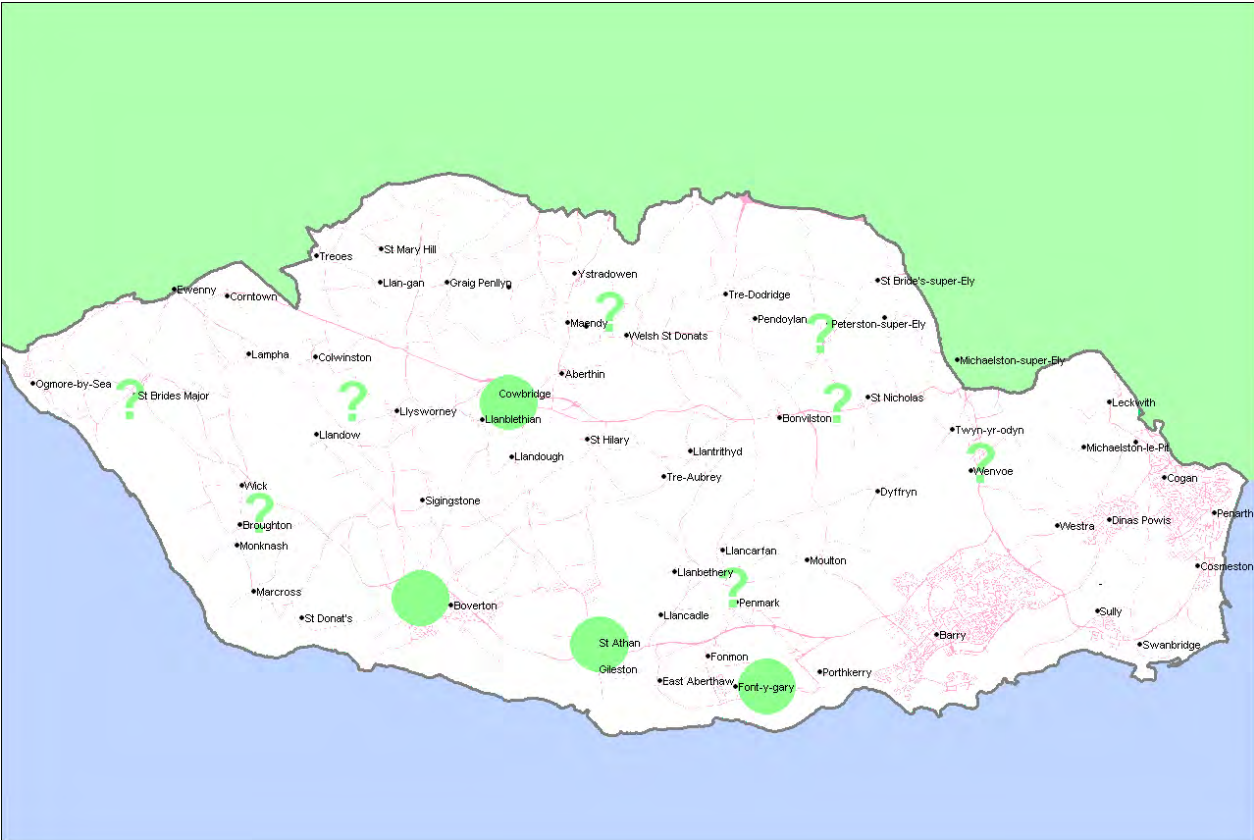

- 4.20 It was considered that this option would provide new employment opportunities in urban areas such as Barry and Penarth, where unemployment is an issue and where the greatest supply of employment land is located. In rural settlements there are a number of existing employment sites that may benefit from new housing development, but there may be limited opportunities for the development of new large employment sites within or adjoining settlements.

### **Key Weaknesses**

- 4.21 Although the level of new housing in each settlement would be higher than under option 2a, it is still uncertain as to whether it would address local housing needs. For instance, the level of affordable housing need is greatest in Barry (source: Vale of Glamorgan Local Housing Market Assessment). Therefore, this option is unlikely to deliver significant benefits in any of the settlements in the Vale of Glamorgan, as new development in any one location is unlikely to be of a large enough scale to justify any significant planning gain.
- 4.22 The key concern with this option is that those rural settlements which do not have appropriate facilities would not benefit from growth and are likely to continue to experience a lack of appropriate services and facilities.

**Option 3**  
Higher growth in the larger villages in rural areas (e.g. Llantwit Major, Cowbridge, St. Athan, Rhoose and potentially others to be identified)

4.23 Unlike Option 1, this option would concentrate future development within the larger rural settlements that have good levels of services; facilities and infrastructure relative to other settlements within the rural Vale (see Figure 5).

**Figure 5: Indicative Illustration of Option 3**

**Key Strengths**

- 4.24 Delivery of housing in the identified rural settlements will present an opportunity to increase the provision of affordable housing in the rural part of the Vale of Glamorgan. Furthermore, the option would ensure that facilities in these settlements such as schools, doctors’ surgeries and shops are maintained and enhanced.
- 4.25 The option presents an opportunity to make these settlements more attractive to local residents that currently use services and facilities in nearby larger settlements. It is assumed that local community and leisure facilities will be provided together with new housing through planning conditions and section 106 agreements.

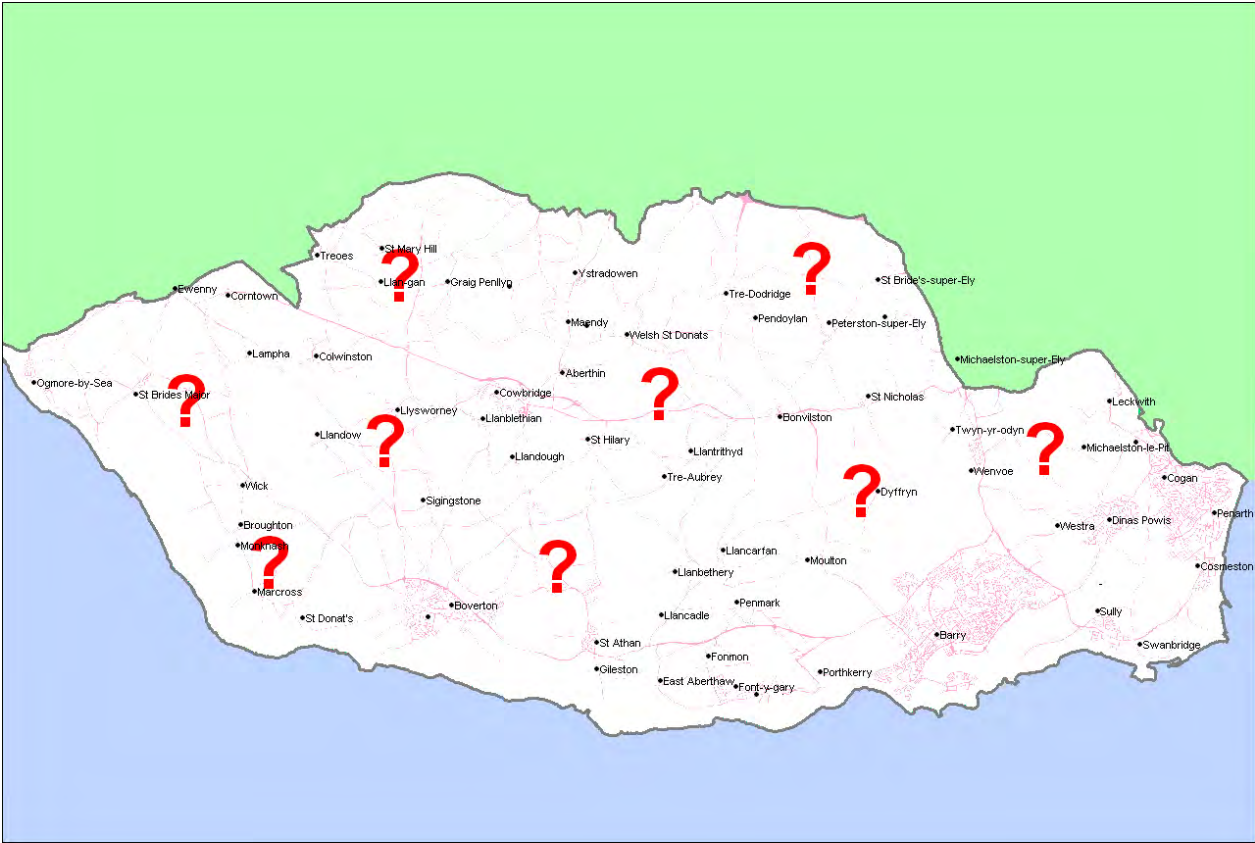

4.26 An increase in population, employment opportunities and overall investment in these four settlements, and potentially others, should contribute positively to their vitality and viability. Additionally, there may be an opportunity to improve bus services in these areas, and other rural settlements (e.g. West Aberthaw, Cog, Penmark, Colwinston and Penllyn).

### Key Weaknesses

- 4.27 High levels of multiple deprivation tend to be concentrated in the urban south east (e.g. Barry). Therefore, focusing growth in the larger rural villages is unlikely to address deprivation issues in urban areas. In addition, the greatest affordable housing need has been identified in urban areas such as Barry and Penarth (Vale of Glamorgan Local Housing Market Assessment 2008). Therefore this option would not adequately address this identified need. Furthermore, concentrating development within the rural Vale, would not remove the need for new development in the eastern vale where the majority of the Vale's population reside and where the majority of new household formation occurs.
- 4.28 Limiting new development opportunities within Barry, would also reduce regeneration opportunities and would therefore undermine the potential for the LDP to support its role as a key settlement in line with the Wales Spatial Plan.
- 4.29 In rural parts of the Vale of Glamorgan, isolation and inaccessibility are key issues and it is doubtful that this strategy option would address these problems. Additionally, this option will focus development in some settlements that are not well served by public transport and where there is limited opportunity to improve it. For example, Rhoose and Llantwit Major are the only settlements within this strategy area to benefit from a rail service.
- 4.30 A key sustainability objective is to ensure that land is used effectively and efficiently, particularly in relation to the use of previously developed land. The availability of brownfield sites is low in the identified settlements and therefore, it is likely that most of the new development will be located on greenfield sites outside settlement boundaries.
- 4.31 New development in these rural settlements is likely to have an adverse impact on biodiversity, landscape, soil function, water resource use and heritage. Furthermore, a number of rural settlements are located in special landscape areas, the character of which may be negatively affected by new development.
- 4.32 Finally, it is likely that there will also be negative implications in terms of the built environment. There are a large number of historic buildings, designations and protected monuments in the rural Vale that may be adversely affected by additional development in these settlements. In particular there are significant numbers of listed buildings in Llantwit Major and Cowbridge. However, planning policy can ensure that new development enhances and promotes the quality of the cultural and historic environment.

**Option 4**  
**A rural new settlement able to promote sustainable self containment**

4.33 This option would result in the majority of new development being concentrated in one area in the form of a new settlement. In order to ensure that the new settlement would support a sustainable population, a range of services and facilities, including infrastructure would form part of the development proposals (see Figure 6).

**Figure 6: Indicative Illustration of Option 4**

**Key Strengths**

- 4.34 The development of a new rural settlement is likely to deliver various benefits (e.g. the provision of new housing, local facilities and services) to a particular part of the rural Vale. Although the benefits would depend on the exact location of the new settlement, it was recognised that the residents of existing nearby settlements would also have access to these.
- 4.35 The provision of a new settlement could provide the opportunity to develop a well designed and accessible environment for its residents. The option would create opportunities for applying the latest building codes to increase energy efficiency and decrease carbon emissions. However it was noted that these benefits would be negligible if residents were reliant accessing employment and other essential services / facilities by car. Moreover, it is highly probable that any benefits would only be accrued at the later stages of the development when the majority of services and facilities would be in place.

## Key Weaknesses

- 4.36 If the development of a new rural settlement was the focus of the LDP strategy, it is unlikely that other issues that need to be addressed throughout the Vale of Glamorgan would be resolved.
- 4.37 For example, whilst some housing would be provided in the urban settlements, this would be limited and therefore would not address housing need (in particular affordable housing) where it occurs. It is considered that this would result in households having to meet housing needs elsewhere (e.g. new rural settlement) and increased house prices in areas of greatest demand, which in turn would perpetuate existing affordable housing needs.
- 4.38 If the settlement is sustainable and self-contained, it was considered that there would be a requirement for local employment opportunities to be provided in tandem. However, the Council's Employment Land Study (October 2007) identified the highest demand in Barry (where current employment land supply is greatest). Therefore, a new settlement in itself would not assist in providing a diverse range of employment opportunities locally and would undermine areas best suited to new employment uses.
- 4.39 Other development within the new settlement (e.g. shops, community facilities etc.) could have a negative affect on the vitality and viability of existing nearby settlements. However, in the early stages of the development, residents may not be able to enjoy the range of benefits that it will provide and would therefore have to rely on the existing services and facilities in nearby settlements.
- 4.40 Similarly, the assessment considered that over time, a new settlement is likely to lead to wider traffic congestion through in and out-commuting. Whilst much would depend upon the exact location with respect to existing and proposed public transport links, when compared to other new settlements in the UK, it is unlikely that this would address issues relating to the dependence on private cars in rural areas, nor is it likely to reduce the need to travel to existing major urban centres for higher value services.
- 4.41 The option would be expected to have significant negative environmental effects, although the extent of these would depend upon the location of the new settlement. Development is likely to adversely affect biodiversity, landscape, soil function, water resource use and heritage in the location of the new settlement, although the extent of these effects can be determined and mitigated through an environmental assessment.

## Option 5

Concentrate development opportunities in Barry and the South East Zone. The St. Athan area to be a key development opportunity. Other sustainable settlements to accommodate further housing and associated development.

4.42 This option draws upon elements of Options 1 and 2b, which seek to locate future development within those settlements that have good levels of services and facilities, and transport links. However, this option also recognises the need to consider the potential development opportunities arising from the proposed Defence Training Academy at St. Athan (see Figure 7).

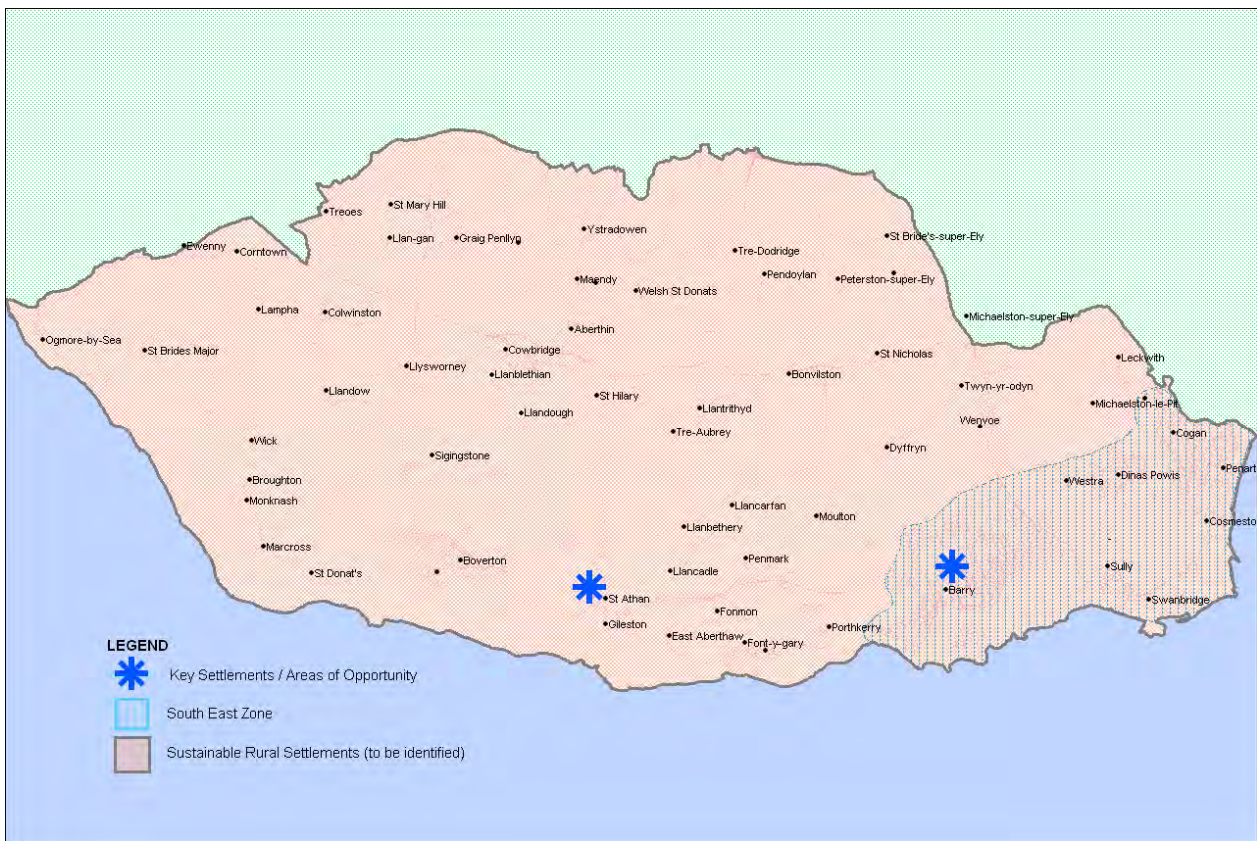

Figure 7: Indicative Illustration of Option 5

### Key Strengths

4.43 The key advantage of this strategy would be its delivery of benefits to both urban and rural parts of the Vale of Glamorgan. With this approach, housing allocations would not be spread too thinly across the Vale of Glamorgan. Delivery of housing would be focused on the identified settlements in both the urban south east and rural Vale. This would enable housing to be focused in areas of need and where future demand would be greatest, such as Barry where the Council's Local Housing Market Assessment (2008) shows the highest need for affordable housing. This option would also support the findings of the Council's Employment Land Study (October 2007) which identified Barry as having a high demand for local employment premises and land. Accordingly, this option would enable the Council

to rejuvenate existing employment sites and increase local employment opportunities in appropriate locations.

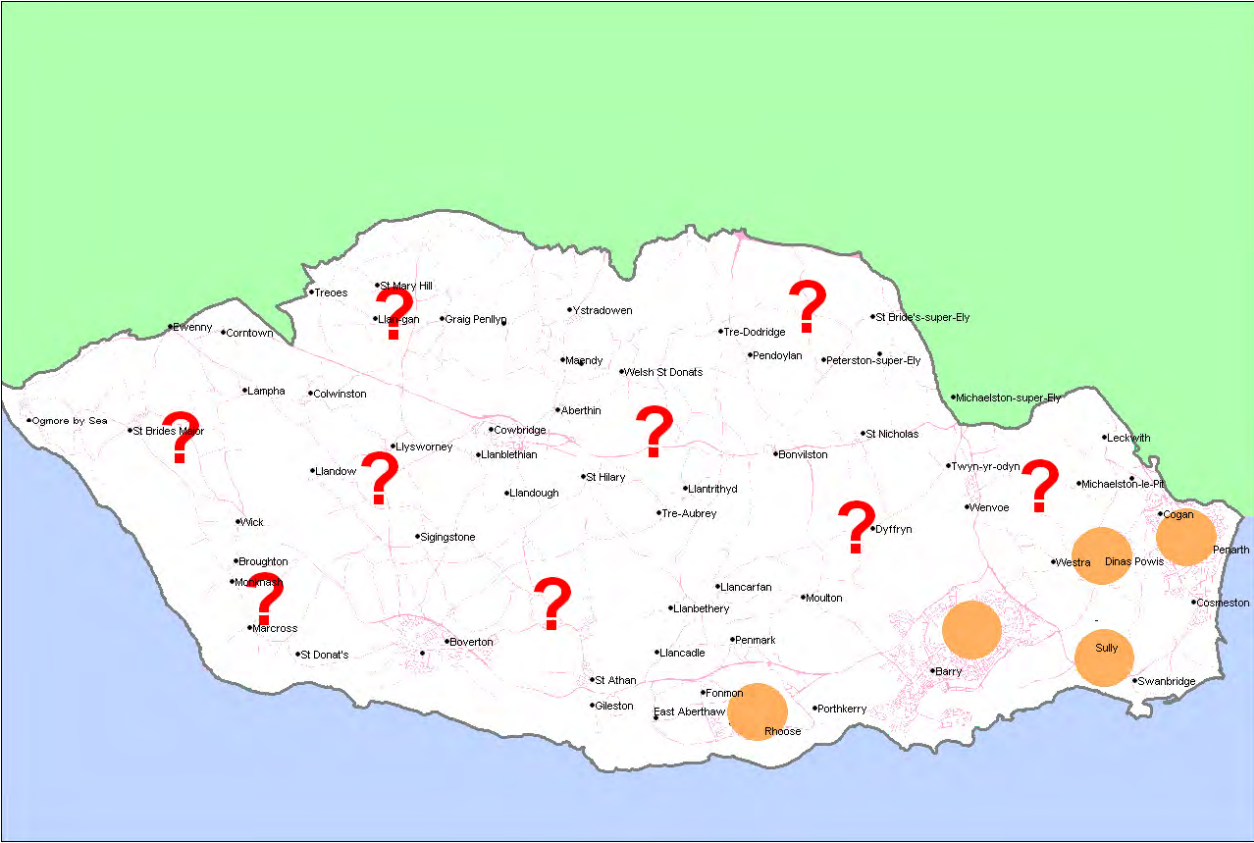

- 4.43 The option would also have the potential to assist in addressing the high levels of multiple deprivation in and around Barry as detailed in the Welsh Index of Multiple Deprivation, through continued support of regeneration and employment opportunities. Whilst deprivation is not a major factor in the rural vale, issues associated with isolation and access to services raised by stakeholders could be improved under this option.
- 4.44 As development would be mainly focused in existing urban areas, there is strong potential for previously developed land to be utilised, where it is available. It should be noted that in the sustainable rural settlements development on greenfield land may occur depending upon the availability of development land within settlement boundaries. It is anticipated that the majority of new development (both housing and employment) at St Athan will be within or immediately adjoining the confines of the existing base. This option offers a good opportunity to attempt to match housing with employment opportunities particularly in Barry and St Athan.
- 4.45 The option presents an opportunity to encourage good quality high-density developments in both urban and rural areas. There is also an opportunity to bring about regeneration particularly in the urban centres, including the enhancement and protection of historic buildings.

### **Key Weaknesses**

- 4.46 The natural environment in and around the settlements identified in this option is likely to be adversely affected, as development may affect biodiversity, landscape, soil function, water resource use and heritage. A number of rural settlements are located in special landscape areas, the character of which may be negatively affected by development.
- 4.47 Furthermore, Rhoose, Barry and Sully are located in close proximity to the coastline, where growth and development may affect the coastal environment. There are SSSIs that may be affected along the Barry stretch of coastline as well as the candidate Severn Estuary SAC. Development may need to occur on greenfield sites where there is a lack of availability of brown field land e.g. Dinas Powys. Potential adverse effects on these environmental designations can be mitigated through planning policy that protects these areas.

**Option 6 (Combination of Option 1 and Option 4)**  
 Maximising the potential of and concentrating growth in Barry, Penarth, Dinas Powys, Sully and Rhoose (current UDP strategy) as well as developing a new rural settlement to promote sustainable self-containment.

**Figure 8: Indicative Illustration of Option 6**

**Key Strengths**

- 4.48 The delivery of housing in urban centres will ensure that development occurs where appropriate facilities are available. Barry and Penarth already have well established local facilities, with additional services being developed as part of the regeneration effort. However, whilst benefits would be realised for the new settlement and the surrounding area, existing poor access to services and facilities would not be addressed elsewhere in the rural Vale.
- 4.49 As with option 4, a new settlement would provide opportunities for the creation of a well designed built environment which would set a precedent elsewhere in the Vale.

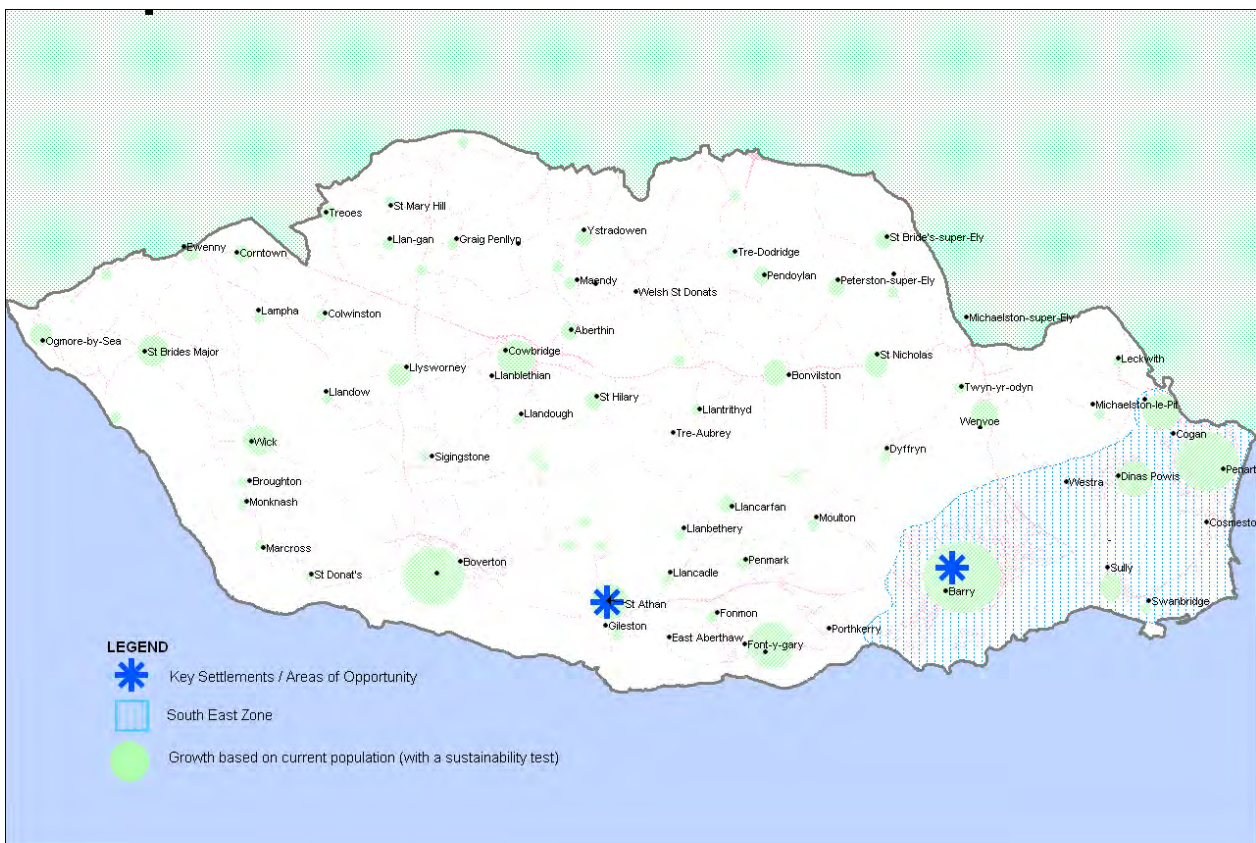

**Key Weaknesses**

- 4.50 The key weakness with this option relates to its limited delivery of benefits to urban parts of the Vale of Glamorgan. For example, under this option the majority of housing would be provided within a new settlement, which the appraisal assumes as being of minimum of 4000 to 5000 dwellings. The effect of this within the urban areas would be an inability for

the plan to address housing need in the areas where it is greatest, i.e Barry and Penarth. Therefore a new settlement as part this option would not necessarily negate the need for further development in other settlements, especially towards the end of the Plan period.

- 4.51 Opportunities for addressing economic and social deprivation within Barry would be limited as a result of a concentration of development opportunities elsewhere, and whilst some improvement to accessing services and facilities would be realised this would be limited to those settlements in close proximity to the new settlement.
- 4.52 It was also considered that issues associated with access to employment and increased commuting would still be a major factor.

**Option 7 (combination of Option 2b and Option 5)**  
**Concentrate development opportunities in Barry and the South East Zone. The St. Athan area to be a key development opportunity. Other sustainable settlements to accommodate further housing and associated development based on a sustainability test.**

**Figure 9: Indicative Illustration of Option 7**

## Key Strengths

- 4.53 This option has the potential to deliver benefits to both rural and urban parts of the Vale of Glamorgan, in settlements with the capacity to accommodate new development. Accordingly, development would provide for both housing and employment needs in centres across the whole of the Vale, therefore supporting the findings of the Council's Employment Land Study (October 2007) and Local Housing Market Assessment (2008).
- 4.54 The use of a sustainability test in identifying smaller settlements in which to focus development will ensure that community facilities (e.g. health care, retail and leisure facilities) remain viable and are not under-utilised. In both rural and urban settlements the option would also provide opportunities for a range of new services to be provided as part of any future development. In addition, the identification of sustainable settlements will ensure that there are adequate local facilities available to support the early stages of development when the provision of new facilities is generally not viable.
- 4.55 Multiple deprivation occurs mainly within the urban south east part of the Vale of Glamorgan. A balanced spread of growth should increase the number of homes and businesses, helping to tackle the causes of deprivation in areas such as Barry. Large growth centres would contribute significantly to employment and residential growth in rural parts of the Vale. However, it was noted that the option would not necessarily reduce deprivation associated with limited access to facilities experienced in the smaller settlements where development would not occur.
- 4.56 A key strength of this option was considered to be the identification of both Barry and St Athan as key growth areas, since this would compliment the Wales Spatial Plan, which identifies Barry as a key settlement and St Athan as a strategic opportunity area. This was seen as providing the plan with opportunities for addressing deprivation in Barry, and exploiting employment opportunities for the benefit of the wider Vale.

## Key Weaknesses

- 4.57 Potential adverse effects identified relate particularly to impacts of development on nature conservation and landscape designations. Development in rural settlements would need to be focused within existing built up areas to ensure that the countryside is protected from inappropriate development. However, it was highlighted that this would be dependent upon the availability of land for development within existing built up areas and the impact that new development would have on the character of the existing settlements. For both urban and rural settlements it was considered that insensitive over development could have a negative impact on the built heritage.

**Option 8 (combination of Option 5 and Option 4)**  
**Concentrate development opportunities in Barry and the South East Zone. The St. Athan area to be a key development opportunity. Other sustainable settlements (including a new rural settlement) to accommodate further housing and associated development.**

Figure 10: Indicative Illustration of Option 8

**Key Strengths**

- 4.58 This option identifies both rural and urban settlements in which development opportunities would be concentrated. As with option 4 and 6, it is assumed that a new settlement would deliver a minimum of 4000 to 5000 dwellings. Accordingly provision of housing and employment in a select number of sustainable settlements across the Vale of Glamorgan could assist in reducing the need to travel to access local services and therefore assist in reducing greenhouse gas emissions from transport. However, more sustainable transport options and improvements to local services would not be realised for the majority of settlements due to a lack of development opportunities.
- 4.59 This option would provide housing in the new settlement and in urban areas but would not fully address the needs in rural areas. This option has potential to meet the housing need around the Vale depending on the distribution of sites across the Vale.
- 4.60 The option could also contribute to a reduction in commuting as there would be more accessible opportunities by public transport and the increased spread of homes, jobs and

services would lead to fewer/shorter trips being made and hence fewer vehicular greenhouse gas emissions.

- 4.61 Increased development and infrastructure could contribute to tourism across the intervention areas and in particular support tourism led regeneration in Barry. However, tourism development in these settlements will depend upon the businesses that start up as growth continues. By supporting a number of rural settlements, the strategy has the potential for enhancing tourism in the rural vale.

### **Key Weaknesses**

- 4.62 A key concern with this option is that the majority of housing units would be developed in the new settlement. As a result, the overall benefits that may be delivered in the identified settlements would be limited.
- 4.63 Whilst supporting the aspirations of the Wales Spatial Plan (WSP) for both Barry and St Athan, the extent to which regeneration would support the WSP would be constrained by the lack of development opportunities within these areas. Consequently, this would result in mixed outcomes, with the greatest benefits being accrued by those settlements within close proximity to the new settlement.
- 4.64 The majority of small rural settlements where access to services has been identified as poor (and for some which have reasonable levels of facilities) would not benefit from this option since development opportunities that could secure improvements would be directed elsewhere. This could undermine the viability of the services within these smaller settlements and lead to pressures for redevelopment as a result of their loss.
- 4.65 In the rural Vale, isolation of settlements may continue to be an issue as there would be a limited provision of facilities and employment opportunities. Bus service provision is considered to be poor in rural settlements, such as, West Aberthaw Cog, Penmark, Colwinston and Penllyn (LDP Sustainability Appraisal Approved Scoping Report, July 2007 refers). It is considered that the development of a new rural settlement would not alleviate these problems.
- 4.66 Depending on the exact location and design of development, flood plains may or may not be affected by this option. Development in coastal areas may be affected by future sea level rise particularly in the low lying estuarine areas around Ogmores-by-Sea, Aberthaw, Barry and Penarth. Furthermore, parts of Sully, Dinas Powys and Barry, are at risk of fluvial flooding.

**New Option: 8a (Combination of Option 5 and a new rural settlement at Llandow)**  
**Concentrate development opportunities in Barry and the South East Zone. The St. Athan area to be a key development opportunity. Other sustainable settlements (including a new rural settlement at Llandow - Llandow Newydd) to accommodate further housing and associated development.**

4.76 This option has been presented to the Council as an alternative strategy option for consideration as part of the SA / LDP process. It is effectively a refined version of option 8, since it includes all the elements of this option but proposes a specific location for a new settlement, that is land adjacent to Llandow Industrial Estate (known as Llandow Newydd). Accordingly, the appraisal provides an assessment of the strategic implications of this option as well as site specific issues relating to the location of the proposal.

4.77 It should be noted that unlike options 4, 6 and 8, which assumed that the new settlement would consist of at least 4000 to 5,000 dwellings, the promoters of Llandow Newydd are proposing to build 2750 dwellings. In addition, the developer has produced a promotional brochure that contains details on the proposed housing mix and provision of facilities. However in order to ensure that the assessment of this option is comparable to the assessment of the other 9 options, the assessment only considers issues of a strategic nature. This is due to the fact that detailed issues such as housing mix etc would have to be assessed in accordance with the policies and planning requirements contained within adopted LDP which has yet to be prepared. However, as with all of the options, the assessment includes possible policy measures which could mitigate against any negative issues identified.

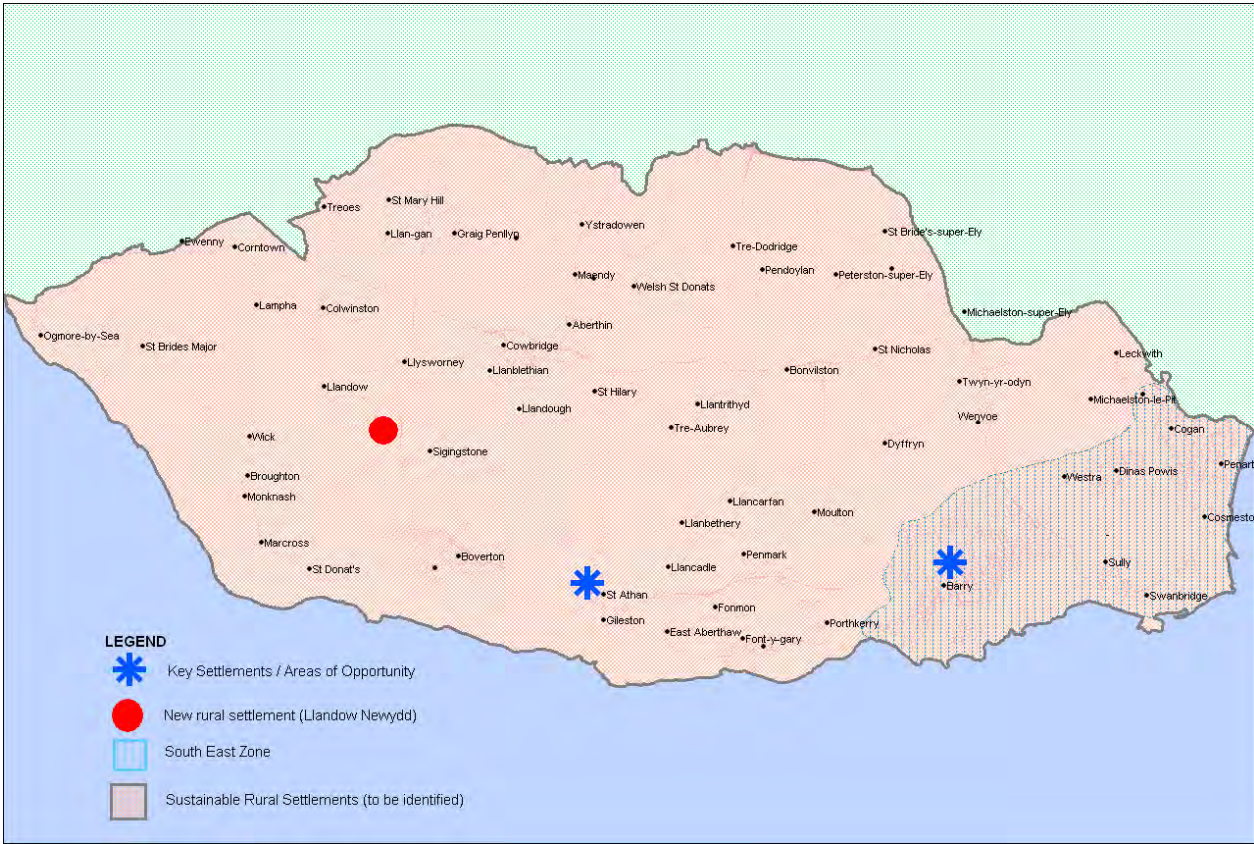

Figure 11: Indicative Illustration of Option 8a

## Key Strengths

- 4.78 This option would allow for development in the south east zone where affordable housing need is highest, especially in Barry and Penarth as highlighted within the Council's Local Housing Market Assessment (2008). However, the provision of a new settlement could restrict the extent to which housing need is delivered in the South East Zone as a significant proportion of the potential housing would be directed to Llandow Newydd. Development within the South East Zone would also provide the opportunity to develop brownfield sites in sustainable locations. This would also assist in tackling the causes of deprivation in these areas.
- 4.79 Option 8a could contribute to a reduction in commuting as there would be more employment and service opportunities in the south east zone that are easily accessible by a range of public transport options. The Llandow Newydd proposal however, would be more reliant on car based journeys to and from essential services, facilities and employment opportunities. It should be noted that whilst a park and ride facility is proposed as part of the development, a rail service is not.

## Key Weaknesses

- 4.80 Llandow Newydd is relatively centrally located within the rural vale, and would deliver a significant proportion of the Council's housing requirement. However, the concentration of a large number of units on one strategic site, albeit located within the rural Vale, would not address housing needs where they occur, or where anticipated growth is required. This could be detrimental to the vitality and viability of smaller rural settlements. This option would therefore not influence or tackle the issue of housing requirements and affordability in those rural settlements. Stakeholders identified the latter point as a key concern at the workshops.
- 4.81 Access to services may be enhanced for settlements within close proximity to Llandow Newydd. However, it is anticipated that the extent of the facilities provided would be limited due to the scheme only proposing 2750 dwellings, thereby clearly not delivering a fully self sustaining community. It is generally accepted that for a new settlement to be sustainable, (i.e. support a sufficient range of services and facilities) it would have to be of between 4000 and 5000 dwellings (see Best Practice in Urban Extensions and New Settlements, TACPA 2007, and Eco Towns Prospectus Communities & Local Government 2007). Accordingly, whilst services within nearby settlements such as Cowbridge and Llantwit Major would be bolstered by increased demand, this would be contrary to meeting the SA objective in relation to Llandow Newydd.
- 4.82 As previously stated, existing rural accessibility issues may not be addressed since levels of development in the rural vale would be concentrated in one location. Therefore, in the rural Vale access to and from settlements to services, facilities and employment opportunities would fail to be adequately addressed.
- 4.83 It is extremely unlikely that existing employment opportunities available at the Llandow estates will serve the needs of the proposed new resident population. The development of Llandow Newydd would therefore increase peak time commuting.
- 4.84 The development of Llandow Newydd would result in the loss of 51 hectares of good quality grade 3a agricultural land and 36 hectares of grade 3b agricultural land as verified by Reading Agricultural Consultants on behalf of the Council. The remaining Llandow Estates are being retained in their current use but should not form part of the proposed development as they are outside the control of the developers. In other parts of the rural

Vale, development within other settlements could utilise some brownfield land, but there will also be a need to consider appropriate greenfield development adjacent to these settlements.

- 4.85 As stated above, it is likely that over time Llandow Newydd would generate wider traffic congestion through in and out-commuting, although much depends upon the actual provision of public transport links. However, considering other new settlements in the UK, it is unlikely that this would address issues relating to the dependence on private cars in rural areas, nor is it likely to reduce the need to travel to existing major urban centres for higher value services.
- 4.86 A new settlement in the rural Vale is also highly likely to limit or prejudice the delivery of urban regeneration opportunities and development of other sustainable sites within existing settlements already benefiting from existing services and facilities e.g. Barry Waterfront. Such an approach would be contrary to the Council's Community Strategy.

## 5. SUMMARY OF FINDINGS

- 5.1 The aim of the SA is to make sure that the strategy chosen by the Council will support the delivery of social, economic and environmental objectives in equal measures. The SA of the options provides the opportunity to explore alternative ways of addressing the same sustainability issues affecting the Vale of Glamorgan and where possible remove conflicts with the sustainability objectives.

### ISSUES RELATING TO ALL OPTIONS

- 5.2 In appraising the options, the following issues were identified as being common to all:
- Depending on the scale of proposed development, it is possible for any of the options to have either negative or positive affects on community spirit in existing communities.
  - Development will initially result in increased energy use during construction.
  - All the options would lead to negative and positive impacts on climate change- it is unlikely that any of the options will lead to either a reduction in CO2 or a neutral outcome as a result of increased population and associated energy usage. Therefore the assessment indicates whether the option would assist positively or negatively towards meeting the SA objective.
  - Across the Vale there are landscape and nature conservation designations of local, national and international importance, historic built and natural assets and areas at risk of flooding which need to be considered. Environmental baseline data maps can be found in Appendix 3 of the Council's LDP SA Approved Scoping Report (July 2007). It is assumed that National Planning Guidance and other legislation would assist in determining the suitability of sites for development and identifying mitigation measures.
  - Waste minimisation would be influenced by national targets for recycling therefore the outcome of each option would be the same.
  - Delivery of housing and employment opportunities will need to be considered in relation to future population projections, as well as the findings of the Council's Employment Land Study (October 2008) and the Council's Local Housing Market Assessment.

### SUMMARY OF MITIGATION MEASURES

- 5.3 The SA process includes a requirement to identify measures to prevent, reduce or offset significant adverse effects of the strategy options considered. These can include mitigation measures or proactive avoidance of adverse effects and/or proposed actions where effects are noticed. Mitigation measures can also include recommendations for improving beneficial effects. Accordingly, the appraisal tables of each option at Appendix X identify a number of mitigation measures that would either assist in addressing any negative outcomes identified or further improve the options success towards meeting the sustainability objective.

- 5.4 For the purposes of the appraisal, mitigation measures have focused on planning policy measures that could be included within either the LDP Preferred Strategy and/or the final adopted LDP. Table 1 below provides a summary of the policy measures, which at this stage are generic to all options. Due to the strategic nature of the options, further appraisal of mitigation measures would need to be considered at the later stages of the plan preparation where site specific issues can be identified. However, it should be noted that the level of influence each policy measure can have in mitigating against negative effects or contribute towards positive outcomes identified are themselves influenced by each strategy option.
- 5.5 For some options, the assessment also identified the Council's candidate site methodology as a potential mitigating tool, as it would allow the Council to identify site specific issues such as flood risk or nature conservation designations that could result in the sites either being omitted from development or appropriate mitigation measures being identified and forming part of any future development proposal. Again since each option had inherent characteristics that had a direct impact on the outcome, the effectiveness of the candidate site methodology would be limited. Further detail on this is considered in the conclusions and recommendations in the following section.

**TABLE 1 PROPOSED MITIGATION MEASURES**

| SA Objective  | Mitigation measures.  |
|---|---|
| 1. To provide the opportunity for people to meet their housing needs.   | Consider policies that ensure that an appropriate mix of housing is provided within new housing developments to meet the needs identified within the Local Housing Market Assessment (2008).  |
| 2. To maintain, promote and enhance the range of local facilities   | Inclusion of policies for ensuring that appropriate community facilities are provided as part of any new development, and for the protection of existing community facilities.  |
| 3. To maintain and improve access for all.  | Design policies and Building regulations would provide the key mitigation tool for all development.   |
| 5. To maintain, protect and enhance community spirit.   | Design policies should ensure that new development is integrated into existing communities, and that the provision of new community facilities and the appropriate mix and type of housing is provided.   |
| 6. To minimise the causes and manage the effects of climate change.   | National Planning Guidance will determine the types of development that will be permitted within areas that are known to be at risk of flooding.<br>Consideration of higher energy efficiency standards than the minimum required through the adoption of the Code for Sustainable Homes. |
| 7. To minimise waste.   | Include a policy requiring the provision of recycling facilities within new developments.   |
| 8. To use land effectively and efficiently.   | Ensure that the plan includes policies which promote the reuse of brownfield sites over greenfield sites.<br>Include design policies that encourage high density development.   |
| 9. To protect and enhance the built and natural environment.  | Develop policies that promote good design and respect rural and urban settings, including landscape features historic environments and conservation areas   |
| 10. To provide a high quality environment within all new developments.  |   |
| 11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage       |   |
| 12. To reduce the need to travel and enable the use of more sustainable modes of transport.                         | Develop policies that require appropriate planning contributions are provided to improve local transport facilities <b>and</b> where possible strategic highway improvements.   |
| 13. To provide for a diverse range of local job opportunities.  | Consider policies for enhancing rural employment through rural diversification, conversion of rural buildings for business use and home working.<br>Consider the potential for mixed use developments that can bring forward under utilised employment sites in strategic locations.      |
| 14. To maintain and enhance the vitality and viability of the Vale of Glamorgan's town, district and local centres. | Develop policies that promote new retail development that would support the vitality and viability of existing retail centres and protect essential services within small rural services such as shops and pubs.  |
| 15. To promote appropriate tourism.   | Develop policies that promote appropriate tourism development within both urban and rural areas.  |

## SUMMARY EFFECTS OF EACH OPTION

- 5.6 The appraisal revealed that each option contained inherent features that from the outset would either have a positive or a negative impact on each of the SA objectives.
- 5.7 Section 4 above provided a summary of the key strengths and weaknesses of each option, which also considered secondary and synergistic effects in relation to meeting the SA objectives. However, the SA process also requires the identification of cumulative effects, that is, the overall potential impact (both negative and positive) of the strategy when considered as a whole. For this reason a key outcome of the SA is to identify the cumulative effect of each option. In relation to the LDP this means the identification of those options that would provide the greatest benefit to the widest area without unduly affecting the overall sustainability objectives.
- 5.8 To determine the actual cumulative effects of each option would at this stage be particularly difficult given their strategic nature. Therefore the Council has chosen to compare the headline results of each strategy option as summarised in Table 2 below. In addition, consideration of the commentary provided for each option in section 4 and the influence that the mitigation measures identified through the appraisal will have on each option also forms part of the analysis.
- 5.9 From the summary table it can be seen that Options **1, 2b, 5** and **7** would produce positive outcomes for both urban and rural areas, with **Options 5** and **7** performing the best. Whilst the appraisal indicates that Option 5 and 7 also had the potential for providing mixed benefits in both rural and urban areas, it is considered that a combination of policy measures and the candidate site assessment stage would assist in mitigating against any negative effects and also enhancing further positive outcomes identified.
- 5.10 For **Option 2a**, the summary table highlights that some benefits for both urban and rural areas would be realised, but the effectiveness of the options would be limited in both areas, and could also give rise to negative outcomes in the rural Vale. It is considered that this mixed effect was primarily due to the approach of allocating new development on a pro rata basis within all settlements according to current populations. The cumulative effects of this approach would take the form of limited benefits being realised in most settlements and additional pressures being placed on existing services in rural areas, reduced opportunities to address social and economic issues where they arise, and an increase in the need to travel- all of which would be difficult to address through the policy measures identified.
- 5.11 With **Option 3**, development would be concentrated primarily within the larger settlements in the rural vale and the appraisal highlighted that this would produce the least favourable outcome against the SA objectives for urban areas. In addition, there would also be few benefits in the rural Vale where development takes place. As with option 2a, mitigation through policy intervention would have limited impact on the overall performance against the SA objectives, especially in relation to addressing economic and social disparities and affordable housing need that exists mainly in the urban south east Vale.
- 5.12 For options **4, 6, 8** and **8a** which included a new settlement either wholly or as part of the option, the appraisal indicates that option **4**, would provide the least benefits for both rural and urban areas due to the concentration of development within the new settlement, which

could not be mitigated against due to the nature of the option. Similar outcomes were also identified for **Option 6**, and although it had slightly more benefits than **option 4** in terms of urban settlements, these benefits would diminish over the plan period as such development opportunities would reduce, again limiting the influence of mitigation measures.

- 5.13 For the remaining new settlement options, **8** and **8a**, the outcomes were similar in that they would both produce some positive benefits in both urban and rural areas, although the overall affect would be mixed across the Vale. However the identification of a new rural settlement at Llandow (Llandow Newydd) within option 8a allowed the appraisal to consider more site specific issues that resulted in the appraisal identifying more mixed benefits and negative outcomes within the rural Vale than option 8. For instance, a significant portion of the Llandow Newydd site is classified as subgrade 3a, good quality agricultural land and the site is poorly served by public transport. However common to both options, was the limited ability to address outcomes through mitigation due to the relationship between the location of a new settlement and the ability to provide equal benefits across the wider area, including reduced opportunities for new development to address issues where they exist.

## 6. CONCLUSIONS

- 6.1 The refinement of the SA framework, the subsequent reassessment of the 9 original strategy options and the assessment of a further strategy option (option 8a) have allowed the Council to fully consider the secondary, synergistic and cumulative outcomes of each option and identify appropriate mitigation measures.
- 6.2 This has resulted in different outcomes being reached in relation to the identification of potential strategy options for the Council's LDP. The initial options appraisal report identified Options 5, 7 and 8 for further consideration, whereas the refined assessment methodology has only identified options 5 and 7. A key reason for this different outcome has been the identification of mitigation measures; the relationship between mitigation measures inherent within each option; and the influence that mitigation measures may have on each option.
- 6.3 In relation to options 5 and 7, the suitability of both options were considered within the Council's ISA Report (December 2007) that accompanied the Council's Draft Preferred Strategy. This concluded that option 7 "should be discounted as it was considered that the distribution of future development on the basis of existing levels of population within settlements was too simplistic in planning future development. For instance, it ignores factors such as the role and function of existing settlements and their ability to accommodate growth. Furthermore, it was considered that distributing growth in this manner would limit the flexibility of the Plan to respond to potential unplanned circumstances, which could undermine the overarching strategy" (Paragraph 8.7.4 refers).
- 6.4 Therefore, the undertaking of this second appraisal has reconfirmed the Council's view that option 5 would provide the most appropriate spatial framework for addressing the economic, social and environmental issues affecting both the urban and rural Vale over the LDP period.

**TABLE 2: SUMMARY OF HEADLINE RESULTS OF THE PERFORMANCE OF EACH STRATEGY OPTION AGAINST THE SA OBJECTIVES**

| LDP STRATEGY OPTION | Option1: Maximising the potential of and concentrating growth in Barry, Penarth, Dinas Powys, Sully and Rhoose (current UDP strategy). |            |                | Option 2a: Dispersal of housing and employment opportunities based on the current population of each settlement (without a sustainability test). |            |                | Option 2b: Dispersal of housing and employment opportunities based on the current population of each settlement (with a sustainability test). |            |                |
|---------------------|--|------------|----------------|--|------------|----------------|---|------------|----------------|
|                     | Spatial  |            | Trans-boundary | Spatial  |            | Trans-boundary | Spatial   |            | Trans-boundary |
|                     | Urban SE   | Rural Vale |                | Urban SE   | Rural Vale |                | Urban SE  | Rural Vale |                |
| 1                   | ++   | +/-        | 0              | +/-  | +/-        | 0              | ++  | ++         | 0              |
| 2                   | +  | +/-        | 0              | ?  | -          | 0              | +   | +/-        | 0              |
| 3                   | +  | +/-        | ?              | ?  | ?          | 0              | +   | +/-        | 0              |
| 4                   | +  | 0          | 0              | +  | +          | 0              | +   | -          | 0              |
| 5                   | +  | +/-        | 0              | +  | +/-        | 0              | +   | +          | 0              |
| 6                   | +  | 0          | ?              | +  | -          | -              | +/-   | +/-        | 0              |
| 7                   | +  | +          | +              | +/-  | +/-        | ?              | +   | +          | ?              |
| 8                   | +  | +          | 0              | +  | +/-        | 0              | +   | +/-        | 0              |
| 9                   | +/-  | +          | 0              | +/-  | +/-        | 0              | +/-   | +/-        | 0              |
| 10                  | +  | 0          | 0              | +  | ?          | 0              | ++  | +          | 0              |
| 11                  | +/-  | +          | 0              | +/-  | -          | 0              | +/-   | -          | 0              |
| 12                  | +  | -          | -              | +  | --         | 0              | +   | -          | 0              |
| 13                  | ++   | +/-        | +/-            | +/-  | -          | 0              | +   | +          | 0              |

## Appendix A - SA Option Tables (Options 1 - 8a inclusive)

| Performance |   |
|-------------|---|
| ++          | Option is highly likely to assist the Sustainability Objective                    |
| +           | Option is likely to assist the Sustainability Objective                           |
| 0           | Option is likely to have no effect on the Sustainability Objective                |
| -           | Option is likely to conflict with the Sustainability Objective                    |
| --          | Option is highly likely to conflict with the Sustainability Objective             |
| +/-         | Option is likely to assist and conflict with the Sustainability Objectives        |
| ?           | The effect of the Option on the Sustainability Objective is unclear               |
| +<br>-      | Are the benefits/effects short, long or medium term? ( 5, 10 and 15 year periods) |

**Option1: Maximising the potential of and concentrating growth in Barry, Penarth, Dinas Powys, Sully and Rhose (current UDP strategy).**

|                            |  |            |                |            |             |           |
|----------------------------|--|------------|----------------|------------|-------------|-----------|
| <b>LDP STRATEGY OPTION</b> | <b>Option1: Maximising the potential of and concentrating growth in Barry, Penarth, Dinas Powys, Sully and Rhoose (current UDP strategy).</b>  |            |                |            |             |           |
| <b>SA OBJECTIVE</b>        | <b>1. To provide the opportunity for people to meet their housing needs.</b>   |            |                |            |             |           |
|                            | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |
|                            | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |
| <b>Performance</b>         | ++   | +/-        | 0              | +          | +           | ?         |
| <b>Commentary</b>          | <p>Strategic Option 1 is effectively the current Adopted Vale of Glamorgan Unitary Development Plan (1996-2011) which seeks to concentrate development within the main towns of Barry, Penarth, Dinas Powys, Sully and Rhoose (The Waterfront Strip) together with the main rural towns of Cowbridge and Llantwit Major. It also provides for limited small scale development within 28 smaller rural villages.</p> <p>Therefore the continuation of the existing UDP strategy has the potential to address housing requirements, including that of affordable housing, in urban areas and to a lesser extent within the rural Vale. It would also facilitate the continued regeneration at Barry Waterfront, which includes the development of approximately 2,000 new dwellings, therefore providing an opportunity for the Council to address the high level of affordable housing need in Barry which has been highlighted within the Council's Local Housing Market Assessment. The larger rural settlements of Cowbridge and Llantwit Major would still benefit from some new housing development, but limited development opportunities would exist within the other smaller rural villages. The continuation of the strategy may also be limited due to the lack of new development opportunities within Barry and other settlements that make up the Waterfront Strip. Consequently, the benefits of continuing this strategy would be beneficial in the short to medium term, but would be difficult to maintain in the longer term as housing land supply diminishes.</p> <p>However focusing new growth in the larger urban and rural settlements, it is anticipated that new housing will be provided that is within easy access of existing services and will make use of previously developed land where available.</p> |            |                |            |             |           |
| <b>Mitigation</b>          | To ensure that the SA objective is addressed, there will be a requirement within the LDP to ensure that an appropriate mix of housing is provided within new housing developments to meet the needs identified within the Local Housing Market Assessment. However, the potential for limited development opportunities during the plan period would require securing a high percentage of affordable housing on new allocated sites which may not be financially viable. Alternatively, the consideration of the expansion of settlement boundaries within the 28 smaller settlements would facilitate further growth, but this could lead to increased commuting and a dispersal of development that may not result in securing appropriate facilities to address poor access within rural areas.  |            |                |            |             |           |

| 2. To maintain, promote and enhance the range of local facilities. |   |            |                |            |             |           |  |
|--|---|------------|----------------|------------|-------------|-----------|--|
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +   | +/-        | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>  | <p>Locating development within the larger populated settlements will provide opportunities to secure new and enhanced community and recreation facilities as well as larger catchment areas that would support the provision of new facilities that have the potential to serve a wide area. Therefore this option would lead to increased provision of facilities in urban areas where local communities are likely to use them. Furthermore, the delivery of housing in urban centres will ensure that development occurs where appropriate facilities are available.</p> <p>Since there will be limited development opportunities within the smaller rural settlements that would otherwise contribute towards the provision of new local facilities, rural areas would benefit less through this option, where a significant need for improved transport access and an increase in the provision of local facilities was identified at the key stakeholder workshops and supported by deprivation indices. The Wales Index of Multiple Deprivation (Geographical access to services) indicates that services are less accessible in rural parts of the Vale of Glamorgan than in urban areas.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>  | <p>To ensure that the SA objective is addressed, there will be a requirement within the LDP to contain policies that ensure new development provides for an appropriate level of facilities to meet the needs of new residents, and also ensure that new development does not impose excessive demands on existing services. The use of planning obligations will also support this. However, the ability to secure new services and facilities within the smaller rural settlements as result of development elsewhere could not be justified in planning terms.</p> <p>The use of protectionist policies to safeguard existing services and facilities will be essential in the rural Vale; however the effectiveness of this policy when faced with cases where financial viability is a justification for loss of a rural shop or other commercial facility is questioned. The consideration of the expansion of settlement boundaries within the 28 smaller settlements would facilitate further growth, but this could lead to increased commuting and a dispersal of development that may not result in securing appropriate facilities to address poor access within rural areas.</p>         |            |                |            |             |           |  |
| 3. To maintain and improve access for all.                         |   |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +   | +/-        | ?              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>  | <p>Increased development presents an opportunity for sensitive locational design to ensure that developments are located in accessible locations. Positive effects would be realised in the urban centres to the south east and Rhooose in terms of access to the built environment. However under this option, these benefits may be less within the smaller rural settlements where development opportunities would be limited.</p>   |            |                |            |             |           |  |
| <b>Mitigation</b>  | <p>Design policies within the LDP and Building Regulations would provide the key mitigation tool for all development.</p>   |            |                |            |             |           |  |

| 4. Reduce the causes of deprivation.                  |   |            |                |            |             |           |   |
|---|---|------------|----------------|------------|-------------|-----------|---|
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |   |
| Performance   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |   |
|   |   | +          | 0              | 0          | ?           | +         | + |
| Commentary  | High levels of multiple deprivation are observed mainly in and around Barry as detailed in the Welsh Index of Multiple Deprivation. The option therefore presents an opportunity to address deprivation through regeneration in Barry and other settlements. Multiple deprivation is not a key issue for the rural Vale, although isolation and access to services are areas of concern, and could be addressed in some of the rural settlements.   |            |                |            |             |           |   |
| Mitigation  | Ensuring that employment opportunities are provided within close proximity to areas of deprivation will assist in meeting the SA objective  |            |                |            |             |           |   |
| 5. To maintain, protect and enhance community spirit. |   |            |                |            |             |           |   |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |   |
| Performance   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |   |
|   | +   | +/-        | 0              | ?          | ?           | +         |   |
| Commentary  | Development presents an opportunity to promote distinctiveness, reduce the fear of crime and provide community facilities to enhance community spirit. As this option focuses development in urban settlements, benefits will be realised mainly in urban areas and not in rural communities. However, it should be noted that the option would also safeguard rural settlements from inappropriate development which itself could have a negative impact on community spirit, and therefore could have a neutral effect on community spirit. |            |                |            |             |           |   |
| Mitigation  | Policies for ensuring new development is integrated into existing communities as well as the provision of new community facilities ,improved employment opportunities and affordable housing will make a positive contribution to community spirit.   |            |                |            |             |           |   |

| 6. To minimise the causes and manage the effects of climate change. |   |            |                |            |             |           |  |
|---|---|------------|----------------|------------|-------------|-----------|--|
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
|   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +   | 0          | ?              | -          | ?           | +/-       |  |
| <b>Commentary</b>   | <p>Provision of housing and employment in the main urban centres and larger rural towns where services and facilities are accessible by a range of transport modes will contribute towards reducing greenhouse gas emissions from transport. The option also offers some protection of green spaces. However, new development will initially result in increased energy use during construction.</p> <p>Depending on exact location and design of development, flood plains may or may not be affected. Development in coastal areas may be affected by future sea level rise particularly in the low lying estuarine areas around Ogmores-by-Sea, Aberthaw, Barry and Penarth. Furthermore, parts of Sully, Dinas Powys and Barry, are at risk of fluvial flooding.</p>  |            |                |            |             |           |  |
| <b>Mitigation</b>   | <p>National Planning Guidance will determine the location of development within areas that are known to be at risk of flooding. Similarly the introduction of stringent energy efficient standards for new buildings will assist in mitigating against the contribution that new development and increased energy consumption has on climatic factors. However, the plan should consider setting higher energy efficiency standards than the minimum required through the Code for Sustainable Homes.</p> <p>In terms of coastal flooding, the effects of climate change on coastal settlements is unclear at this stage. However the locational policies of this option would ensure that development would not take place in undeveloped coastal areas.</p> <p>The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.</p> |            |                |            |             |           |  |
| 7. To minimise waste.   |   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
|   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +   | +          | +              | ?          | +           | +         |  |
| <b>Commentary</b>   | <p>The amount of development is the same for all options and therefore the increase in the levels of waste generated will be the same. However, the South East Wales Regional Waste Plan and the Landfill Directive limits the levels of waste going to landfill. Similarly, National Planning Guidance will require the plan to identify preferred locations for new regional waste management facilities. Consequently, this option would inherently make a positive contribution to reducing waste arisings within the Vale of Glamorgan. In addition, development could result in the reuse of disused buildings, reducing waste construction material in both urban and rural areas.</p>   |            |                |            |             |           |  |
| <b>Mitigation</b>   | <p>Ensure that the plan includes a policy that requires the provision of recycling facilities within new developments, and promote the sensitive reuse of existing buildings.</p>   |            |                |            |             |           |  |

| 8. To use land effectively and efficiently.                  |   |            |                |            |             |           |     |
|--|---|------------|----------------|------------|-------------|-----------|-----|
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |     |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |     |
|  |   | +          | +              | 0          | +           | +         | +/- |
| Commentary   | This option offers some protection to the countryside from inappropriate development by focussing development in urban settlements that have brownfield sites and vacant buildings available. Barry in particular has significant amounts of brownfield land that can be re-developed. There is the potential however, that development may occur on greenfield land on the edge of towns, as the availability of brownfield land reduces over the plan period.   |            |                |            |             |           |     |
| Mitigation   | Ensure that the plan includes policies which promote the reuse of brownfield sites over greenfield sites; encourage high density development and where appropriate mixed use developments.  |            |                |            |             |           |     |
| 9. To protect and enhance the built and natural environment. |   |            |                |            |             |           |     |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |     |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |     |
|  | +/-   | +          | 0              | +          | +/-         | ?         |     |
| Commentary   | <p>The impact that new development will have on both urban and rural areas may have either a positive or negative affect on the built environment; dependent upon the design and scale of development. However, in the rural vale, development would be restricted under this option and would therefore provide some protection to the countryside from inappropriate development.</p> <p>It is becoming increasingly evident that some brownfield sites are significant habitats for important species. These habitats may be affected by development in urban areas. Furthermore, Rhoose, Barry and Sully are located in close proximity to the coastline, where growth and development may affect the coastal environment. There are SSSIs that may be affected along the Barry stretch of coastline as well as the candidate Severn Estuary SAC. However, it should be noted that development already occurs within close proximity of the Severn Estuary SAC therefore indicating that the impacts of development can be mitigated against.</p> |            |                |            |             |           |     |
| Mitigation   | Policies that promote good design and respect rural and urban settings will be required to ensure that development contributes positively to the built environment. The location of development particularly where this is in close proximity to nature designations will need to be considered at the candidate site assessment stage. Where this may have an impact on nature designations, ensure that appropriate mitigation measures are identified and imposed through planning conditions/obligations.   |            |                |            |             |           |     |

| 10. To provide a high quality environment within all new developments.   |  |            |                |            |             |           |  |
|--|--|------------|----------------|------------|-------------|-----------|--|
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>   | +  | 0          | 0              | +          | +/-         | +         |  |
| <b>Commentary</b>  | The extent to which this strategy will achieve this objective is dependent upon how development is carried out at project level. It is assumed that planning policy would set out minimum design standards. Development may result in the regeneration of areas such as Barry and the integration of new development may act as a catalyst for overall environmental improvements.   |            |                |            |             |           |  |
| <b>Mitigation</b>  | Policies that promote good design and respect rural and urban settings will be required to ensure that development contributes positively to the built environment. The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.   |            |                |            |             |           |  |
| 11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage. |  |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>   | +/-  | +          | 0              | +          | +           | +         |  |
| <b>Commentary</b>  | <p>There are a large number of historic buildings, designations and protected monuments in the Vale of Glamorgan. In urban centres, there are a number of listed buildings, conservation areas and ancient monuments, which sensitive development could protect and enhance.</p> <p>Growth will provide opportunities in urban areas to improve the quality of cultural and historic environments, particularly with regard to historic buildings. Although new development may offer the opportunity to enhance and promote the quality of the cultural/historic environment, there is a risk that development may be insensitive to these assets. In the rural Vale, where growth is limited, it is assumed that the existing cultural and historic environment will be protected from the negative effects of development. The setting of any monuments will also be protected.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>  | <p>Policies that promote good design and respect rural and urban settings will be required to ensure that development contributes positively to the built environment. Similarly, policies for the protection of conservation areas and historic environments will ensure that the positive contribution that this option has on the SA objective will be enhanced.</p> <p>The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.</p>  |            |                |            |             |           |  |

| 12. To reduce the need to travel and enable the use of more sustainable modes of transport. |  |            |                |            |             |           |
|---|--|------------|----------------|------------|-------------|-----------|
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |
| Performance   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |
|   | +  | -          | -              | +          | +/-         | -         |
| <b>Commentary</b>   | <p>Focusing growth in the urban south east will ensure that development is located in areas with easy access to services as well as to neighbouring areas. Most urban settlements in the south east are also accessible by existing national public transport links, particularly via the Cardiff-Bridgend rail service. However, in the rural Vale isolation of settlements may continue to be an issue, as there would be limited provision of facilities and employment in rural communities. Bus service provision is considered to be poor in Aberthaw (West), Cog, Penmark, Colwinston and Penllyn amongst other rural settlements (as detailed in the LDP Sustainability Appraisal Draft Scoping Report, February 2007).</p> <p>However the concentration of development primarily within the eastern Vale has the potential for increasing pressure on existing infrastructure, especially the strategic highway linking the Vale to Cardiff and the M4, where peak hour congestion is already problematic. Consequently, any benefits associated with improving access to services on a day to day basis may be offset by increased numbers of commuters.</p> |            |                |            |             |           |
| <b>Mitigation</b>   | There is a need to ensure that the plan seeks to improve strategic links as well as those associated with localised development opportunities. There is however a risk that the level of funding for these schemes would not be provided through normal planning obligations and therefore alternative funding options such as through the Regional Transport Plan and/or the Wales Spatial Plan will need to be explored.   |            |                |            |             |           |
| 13. To provide for a diverse range of local job opportunities.                              |  |            |                |            |             |           |
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |
| Performance   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |
|   | ++   | +/-        | +/-            | -          | +/-         | +         |
| <b>Commentary</b>   | <p>Existing employment areas and employment land allocations within the Adopted UDP are located primarily within Barry, Penarth and Rhose, as well as rural employment sites at Llandow. Accordingly, the continuation of this option would provide employment opportunities within both rural and urban areas-although to a lesser extent in the rural Vale. However, the Council's employment land study has identified the need for infrastructure improvements particularly on a number of employment sites in Barry where local employment need is highest (Vale of Glamorgan Employment Land Study 2007 paragraph 10.6). The study also highlighted a higher than average occurrence of self employed persons in the rural Vale (15.2%). Therefore whilst the option would limit local employment opportunities in rural settlements through a limited supply of land, opportunities for home working could still be promoted.</p> <p>In progressing this approach there is the potential to reduce the need for a proportion of the population to commute outside the authority for employment purposes.</p>  |            |                |            |             |           |
| <b>Mitigation</b>   | The option has the potential to meet local employment opportunities providing the plan includes intervention measures that will utilise existing employment land opportunities. Similarly, policies for enhancing rural employment through rural diversification, conversion of rural buildings for business use and homeworking should also be considered.  |            |                |            |             |           |

| 14. To maintain and enhance the vitality and viability of the Vale of Glamorgan's town, district and local centres. |  |            |                |            |             |           |  |
|---|--|------------|----------------|------------|-------------|-----------|--|
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
| Performance   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|   | +  | +          | ?              | +          | +           | +         |  |
| Commentary  | This option offers a significant opportunity to enhance vitality and viability through new development in the Vale's town, district and local centres that provide for a range of services within both the rural and urban areas through the integration of new development near existing facilities. There is also an opportunity to make urban centres attractive to local residents that shop outside of the Vale of Glamorgan or use out-of-town retail developments (e.g. Culverhouse Cross). It is assumed that local community and leisure facilities will be provided together with new housing and employment facilities. An increase in population, jobs and overall investment in a number of local centres should contribute positively to the vitality and viability of the centres, particularly in rural settlements. |            |                |            |             |           |  |
| Mitigation  | To support this objective, policies that promote new retail development that would not undermine the vitality and viability of existing retail centres will be required. Similarly the protection of small rural facilities such as shops and pubs will further support this objective.  |            |                |            |             |           |  |
| 15. To promote appropriate tourism.   |  |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
| Performance   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|   | +  | ++         | 0              | +          | +           | +         |  |
| Commentary  | Growth in the larger towns could provide opportunities for tourism related development, particular in Barry and Barry Island which is the Vale's largest tourist attraction (Vale of Glamorgan Tourism Strategy). It would also ensure that the rural character of the Vale (a tourism asset in itself) would be protected.  |            |                |            |             |           |  |
| Mitigation  | In support of this objective, the plan should include policies that promote appropriate tourism development within both urban and rural areas.   |            |                |            |             |           |  |

Option 2a. Dispersal of housing and employment opportunities based on the current population of each settlement (without a sustainability test).

|                            |  |            |                |            |             |           |  |
|----------------------------|--|------------|----------------|------------|-------------|-----------|--|
| <b>LDP STRATEGY OPTION</b> | <b>Option 2a. Dispersal of housing and employment opportunities based on the current population of each settlement (without a sustainability test).</b>  |            |                |            |             |           |  |
| <b>SA OBJECTIVE</b>        | <b>1. To provide the opportunity for people to meet their housing needs.</b>   |            |                |            |             |           |  |
|                            | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|                            | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>         | +/-  | +/-        | 0              | +          | +/-         | -         |  |
| <b>Commentary</b>          | Although the option is likely to address housing issues throughout the Vale of Glamorgan, it is unlikely that the level of new housing in each settlement will be directed to the areas where need is the greatest. For example, Barry has the highest level of affordable housing need (Vale of Glamorgan Local Housing Market Assessment). Current settlement population alone therefore does not give an accurate indication of future housing need. Without a sustainability test, housing may be provided in settlements that do not have sufficient facilities to support new development.   |            |                |            |             |           |  |
| <b>Mitigation</b>          | Given the basis on which future housing would be dispersed, it would prove difficult to develop policy measures that would ensure that the appropriate levels of affordable and general market housing could be delivered to meet the needs of each settlement, i.e. a range of site thresholds and affordable housing targets would need to be set on a site by site basis. In areas of greatest need this could also result in the setting of unrealistically high site targets.   |            |                |            |             |           |  |
|                            | <b>2. To maintain, promote and enhance the range of local facilities.</b>  |            |                |            |             |           |  |
|                            | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|                            | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>         | ?  | -          | 0              | +/-        | +/-         | -         |  |
| <b>Commentary</b>          | This option will deliver housing without consideration of the availability of the level of existing facilities to support the planned housing. It is therefore likely that development will occur in settlements that do not have the facilities to meet the needs of the local population. Also given that some of the rural settlements have small populations, the level of development would be comparable, and therefore it would be difficult to secure new local facilities. The Wales Index of Multiple Deprivation (Geographical access to services) indicates that services are less accessible in rural parts of the Vale of Glamorgan than in urban areas.<br><br>In those settlements that have a good range of local facilities (e.g. Barry and Penarth), new development may ensure that these are maintained and well-used. However, it may be considered that due to the dispersed nature of development under this strategy, pressure on existing facilities may not increase significantly in small, rural settlements. |            |                |            |             |           |  |
| <b>Mitigation</b>          | Whilst there may be scope to set policies to secure new facilities through planning obligations it is likely that these would be limited in the rural vale where levels of development would not support contributions to new facilities.  |            |                |            |             |           |  |

|  |  |            |                |            |             |           |  |
|--|--|------------|----------------|------------|-------------|-----------|--|
| <b>3. To maintain and improve access for all.</b>            |  |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
| Performance  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | ?  | ?          | 0              | +          | +           | +         |  |
| Commentary   | Increased development presents an opportunity for sensitive locational design to ensure that developments are located in accessible locations.   |            |                |            |             |           |  |
| Mitigation   | Design policies within the LDP and Building Regulations would provide the key mitigation tool for all development.   |            |                |            |             |           |  |
| <b>4. Reduce the causes of deprivation.</b>                  |  |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
| Performance  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +  | +          | 0              | ?          | +           | +         |  |
| Commentary   | Areas with relatively high levels of multiple deprivation are mainly concentrated in and around Barry. Provision of housing and employment opportunities will be focused in larger urban settlements including Barry, presenting the opportunity to reduce the causes of deprivation. The introduction of new housing offers the opportunity to enhance facilities through planning conditions and S106 agreements.                |            |                |            |             |           |  |
| Mitigation   | Ensuring that employment opportunities are provided within close proximity to areas of deprivation will assist in meeting the SA objective. Policies that promote small scale rural employment would also assist rural areas.  |            |                |            |             |           |  |
| <b>5. To maintain, protect and enhance community spirit.</b> |  |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
| Performance  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +  | +/-        | 0              | ?          | +/-         | +/-       |  |
| Commentary   | It would be expected that new developments would be designed to enhance community spirit through local distinctiveness and a reduction in the fear of crime. However, provision of new housing on a pro rata basis could result in development impacting on the smaller rural settlements that could harm rather than enhance community spirit, although this option also could ensure the viability of smaller rural communities. |            |                |            |             |           |  |
| Mitigation   | Policies for ensuring new development is integrated into existing communities as well as the provision of new community facilities ,improved employment opportunities and affordable housing will make a positive contribution to community spirit.  |            |                |            |             |           |  |

| 6. To minimise the causes and manage the effects of climate change. |  |            |                |            |             |           |  |
|---|--|------------|----------------|------------|-------------|-----------|--|
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +  | -          | -              | 0          | -           | -         |  |
| <b>Commentary</b>   | <p>Provision of housing and employment across the Vale of Glamorgan would invariably lead to an increased demand for travel as the proposal would lead to more development in rural areas where access to services is limited. The Wales Index of Multiple Deprivation (Geographical access to services) indicates that services are less accessible in rural parts of the Vale of Glamorgan than in urban areas. Therefore any advancement made in reducing the need to travel in the better serviced urban centres would be lost.</p> <p>Development will initially result in increased energy use during construction. The development of energy efficient buildings can help reduce operational energy requirements of new buildings.</p> <p>Issues relating to development in floodplains and effects on green sincs will be dependent upon the specific location of development. Additionally development in coastal areas may be affected by future sea level rise particularly in the low lying estuarine areas around Ogmores-by-Sea, Aberthaw, Barry and Penarth. Parts of Sully, Dinas Powys, Barry, Llandow and Pendoylan amongst others are also at risk of fluvial flooding.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>   | <p>The location of housing within the plan is a key determinant in the success of the plan's ability to mitigate against the effects of climate change, Accordingly through this option it would be difficult to mitigate against the impact of a dispersed housing strategy. Notwithstanding this, National Planning Guidance would determine the location of development by directing housing away from areas that are known to be at risk of flooding. Similarly, increased energy efficient building regulations would limit the impact of new development on climate change, although the locational policies of this option would undermine any benefits.</p> <p>In terms of coastal flooding, the effects of climate change on coastal settlements are at this stage unclear. However the locational policies of this option would ensure that development would not take place in undeveloped coastal areas.</p> <p>The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.</p>   |            |                |            |             |           |  |
| 7. To minimise waste.   |  |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +/-  | +/-        | ?              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>   | <p>The amount of development proposed is the same for all options and therefore the increase in the levels of waste generated will be the same. However, the South East Wales Regional Waste Plan and the Landfill Directive limits the levels of waste going to landfill. Similarly, National Planning Guidance will require the plan to identify preferred locations for new regional waste management facilities. Whilst the options would therefore make a positive contribution to reducing waste arisings within the Vale of Glamorgan, the increased dispersal of the population would place pressure on the delivery of recycling services. Development could also result in the reuse of disused buildings and reducing waste construction material in both urban and rural areas.</p>  |            |                |            |             |           |  |
| <b>Mitigation</b>   | <p>Ensure that the plan includes a policy that requires the provision of recycling facilities within new developments, and promote the sensitive reuse of existing buildings.</p>  |            |                |            |             |           |  |

| 8. To use land effectively and efficiently.                  |  |            |                |            |             |           |   |
|--|--|------------|----------------|------------|-------------|-----------|---|
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |   |
| Performance  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |   |
|  |  | +          | +/-            | 0          | +/-         | +/-       | - |
| Commentary   | This option would provide opportunities to develop Brownfield sites in urban areas, particularly Barry. However, achieving this within rural settlements would be challenging. Also this is likely to require the extension of rural settlement boundaries to ensure that their existing character is safeguarded, which could lead to development encroaching on sensitive landscape areas and the loss of agricultural land. The option would however present the opportunity to encourage good quality high-density developments in both urban and rural areas.   |            |                |            |             |           |   |
| Mitigation   | Policies encouraging high density developments particularly within the urban settlements will assist in ensuring that this objective is supported. However, in smaller rural settlements where residential densities are lower this could have a negative impact on their character therefore a strong emphasis of design would need to be applied. Invariably, the option will require the development of a proportion of Greenfield land which against design policies could assist in mitigating the impact on landscape etc.   |            |                |            |             |           |   |
| 9. To protect and enhance the built and natural environment. |  |            |                |            |             |           |   |
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |   |
| Performance  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |   |
|  | +/-  | +/-        | 0              | +/-        | +/-         | +/-       |   |
| Commentary   | <p>Protection of the natural environment is dependant on ensuring that development is focussed within settlement boundaries. Development/growth offers the opportunity to improve or enhance the quality of the built environment through regeneration and the integration of new development within urban centres.</p> <p>The natural environment in and around settlements is likely to be adversely affected as development may affect biodiversity, landscape, soil function, water resource use and heritage. A number of rural settlements are located in special landscape areas, the character of which may be negatively affected by development. Furthermore, Rhoose, Barry and Sully are located in close proximity to the coastline, where growth and development may affect the coastal environment. There are SSSIs that may be affected along the Barry stretch of coastline as well as the candidate Severn Estuary SAC.</p> |            |                |            |             |           |   |
| Mitigation   | <p>Policies that promote good design and respect rural and urban settings will be required to ensure that development contributes positively to the built environment. However, the loss of green field sites adjoining existing settlements could harm the setting and character of some of the rural settlements, or special landscape areas. The location of development (particularly where this is in close proximity to nature designations) will need to be considered at the candidate site assessment stage. Where this may have an impact on landscape and nature designations ensure that appropriate mitigation measures are identified and imposed through planning conditions/obligations.</p> <p>The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.</p>   |            |                |            |             |           |   |

|   |  |            |                |            |             |           |  |
|---|--|------------|----------------|------------|-------------|-----------|--|
| <b>10. To provide a high quality environment within all new developments.</b>   |  |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +  | ?          | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>   | The extent to which this strategy will achieve this objective is dependent upon how development is carried out at project level. Development may result in the regeneration of areas such as Barry and the integration of new development may act as a catalyst for overall environmental improvements.  |            |                |            |             |           |  |
| <b>Mitigation</b>   | The adoption of stringent policies that promote good design and respect rural and urban settings will be required to ensure that development contributes positively to the built environment.  |            |                |            |             |           |  |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage.</b> |  |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +/-  | -          | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>   | There are a large number of historic buildings, designations and protected monuments in the Vale of Glamorgan. In urban centres, there are a number of listed buildings, conservation areas and ancient monuments, which sensitive development could enhance and promote. Growth will provide opportunities in urban areas to improve the quality of cultural and historic environments, particularly with regard to historic buildings. Although new development may offer the opportunity to enhance and promote the quality of the cultural/historic environment, there is the risk that insensitive development may harm these assets. There are heritage features of value in rural areas that may also be affected by new development. |            |                |            |             |           |  |
| <b>Mitigation</b>   | <p>The adoption of stringent policies that promote good design and respect rural and urban settings will be required to ensure that development contributes positively to the built environment.</p> <p>The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.</p>   |            |                |            |             |           |  |

| 12. To reduce the need to travel and enable the use of more sustainable modes of transport. |   |            |                |            |             |           |  |
|---|---|------------|----------------|------------|-------------|-----------|--|
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|   | +   | --         | 0              | 0          | -           | -         |  |
| Commentary  | <p>Development in the main urban centres such as Barry and Penarth may lead to a reduction in the need to travel by car, resulting in the use of more sustainable forms of transport and also reducing pressure on strategic highways at peak times. Most urban settlements are accessible by existing national public transport links, particularly via the Cardiff-Bridgend rail service. In the rural vale, the effect would be an increase in private transport as a result of an increased population that have poor access to services and facilities. As highlighted above the level of development forecast in the smaller rural settlements is unlikely to be of a scale that would support new public transport services or local facilities. For both urban and rural areas, there is the potential for the majority of residents to work away as the jobs they require are unlikely to be provided within the local area (as detailed in the LDP Sustainability Appraisal Draft Scoping Report, February 2007). In larger centres, however, it may be possible to provide appropriate employment facilities and thereby reduce commuting.</p> |            |                |            |             |           |  |
| Mitigation  | <p>The location of housing and employment opportunities within the plan is a key determinant in the success of the plan in promoting the use of sustainable modes of transport. Accordingly there exists a conflict between the SA objective and the strategic option that may not be sufficiently mitigated against.</p>   |            |                |            |             |           |  |
| 13. To provide for a diverse range of local job opportunities.                              |   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|   | +/-   | -          | 0              | +          | -           | -         |  |
| Commentary  | <p>Development is likely to provide opportunities for employment in urban areas such as Barry and Penarth, where unemployment is an issue. It may be difficult to attract some large employers to smaller settlements due to there not being appropriate sites for large scale industrial developments. This therefore limits the range of job opportunities that can be provided in rural settlements. Overall, although job opportunities may be increased (though not significantly) the range of jobs available will be limited due to the dispersed nature of development.</p>   |            |                |            |             |           |  |
| Mitigation  | <p>The location of employment sites within the plan is the key to supporting this objective. Therefore mitigation measures would require smaller employment sites within rural areas and fewer larger employments sites in the areas of higher population numbers. However, the Council's employment land strategy has identified that demand for new employment sites and land is greatest in Barry. Therefore this strategy option would result in a mismatch between supply and demand. Furthermore, this option would not support the role of Barry as a key settlement as aspired to within the Wales Spatial Plan.</p>  |            |                |            |             |           |  |

| 14. To maintain and enhance the vitality and viability of the Vale of Glamorgan's town, district and local centres. |  |            |                |            |             |           |
|---|--|------------|----------------|------------|-------------|-----------|
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |
| Performance   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |
|   | ++   | ++         | 0              | +          | +           | +         |
| Commentary  | This option offers a significant opportunity to enhance the vitality and viability of the Vale's town, district and local centres that serve both urban and rural areas. There is an opportunity to make town centres attractive to local residents that shop outside of the Vale or use out-of-town retail developments. An increase in population, jobs and overall investment in a number of local centres should contribute positively to vitality and viability of the centres, and also assist in supporting individual rural shops and pubs which play an important role particularly in rural communities. |            |                |            |             |           |
| Mitigation  | To support this objective, policies that promote new retail development that would not undermine the vitality and viability of existing retail centres will be required. Similarly the protection of small rural services such as shops and pubs will further support this objective.  |            |                |            |             |           |
| 15. To promote appropriate tourism.   |  |            |                |            |             |           |
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |
| Performance   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |
|   | ?  | ?          | 0              | +/-        | +/-         | +/-       |
| Commentary  | Due to the dispersed nature of development under this strategy, it is unlikely that specific tourism development will occur purely as a result of the strategy. Development in the various settlements may enhance or negatively affect tourism assets in those areas particularly within the rural Vale.  |            |                |            |             |           |
| Mitigation  | In support of tourism, the plan should include policies that promote appropriate tourism development within both urban and rural areas. However, as identified above the location of new development could have a negative impact on the countryside therefore reducing potential tourism development.   |            |                |            |             |           |

| Performance |   |
|-------------|---|
| ++          | Option is highly likely to assist the Sustainability Objective                    |

| ?           | The effect of the Option on the Sustainability Objective is unclear               |
| +<br>-      | Are the benefits/effects short, long or medium term? ( 5, 10 and 15 year periods) |

**Option 2b: Dispersal of housing and employment opportunities based on the current population of each settlement (with a sustainability test).**

|                            |  |            |                |            |             |           |  |
|----------------------------|--|------------|----------------|------------|-------------|-----------|--|
| <b>LDP STRATEGY OPTION</b> | <b>Option 2b: Dispersal of housing and employment opportunities based on the current population of each settlement (with a sustainability test).</b>   |            |                |            |             |           |  |
| <b>SA OBJECTIVE</b>        | <b>1. To provide the opportunity for people to meet their housing needs.</b>   |            |                |            |             |           |  |
|                            | What is the predicted effect of the option on each SA Objective?   |            |                |            |             |           |  |
|                            | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>         | ++   | ++         | 0              | +          | +           | +/-       |  |
| <b>Commentary</b>          | <p>It is likely that this option will promote the delivery of appropriate housing in settlements that have existing facilities available to support the increase in population. Some settlements in need of housing, particularly those in the rural part of the Vale of Glamorgan, but without sufficient facilities to support additional housing may be excluded when settlements are identified for development.</p> <p>Although the level of housing identified for each settlement would be higher than under option 2a, it is still uncertain as to whether the level of new housing in each settlement would address local housing needs. In Barry for example, the level of affordable housing need is greatest (Vale of Glamorgan Local Housing Market Assessment).</p> <p>Whilst the option would assist in meeting the SA objective in the short to medium term, this would prove more difficult as land in areas of greatest housing need would diminish due to the way that development would be apportioned to each settlement.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>          | Setting site specific thresholds for affordable housing would assist in meeting the SA objective, however it may require the setting of unrealistic affordable housing targets in settlements where need is greatest and development opportunities are limited as result of the approach for allocating sites under this option.   |            |                |            |             |           |  |
|                            | <b>2. To maintain, promote and enhance the range of local facilities.</b>  |            |                |            |             |           |  |
|                            | What is the predicted effect of the option on each SA Objective?   |            |                |            |             |           |  |
|                            | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>         | +  | +/-        | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>          | The option will ensure that the range of facilities in those settlements, in which development occurs, will be maintained, enhanced and promoted. However, as the delivery of this strategy will be determined by the sustainability test, it is likely that settlements with a lack of facilities (particularly in rural part of the Vale of Glamorgan) may be excluded and may continue to experience a shortage of facilities.  |            |                |            |             |           |  |
| <b>Mitigation</b>          | The inclusion of policies for ensuring that appropriate community facilities are provided as part of any new development, and that existing community facilities are safeguarded would assist in meeting this objective.   |            |                |            |             |           |  |

|  |  |            |                |            |             |           |  |
|--|--|------------|----------------|------------|-------------|-----------|--|
| <b>3. To maintain and improve access for all.</b>            |  |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each SA Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +  | +/-        | 0              | +/-        | +/-         | +/-       |  |
| Commentary   | Growth in settlements identified as being sustainable will result in a greater proportion of the population having improved access to facilities and services. However this may not be the case for smaller rural settlements.   |            |                |            |             |           |  |
| Mitigation   | Design policies within the LDP and Building regulations would provide the key mitigation tool for all development.   |            |                |            |             |           |  |
| <b>4. Reduce the causes of deprivation.</b>                  |  |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each SA Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +  | -          | 0              | +          | +           | +         |  |
| Commentary   | The sustainability test will identify those settlements with sufficient facilities including health services, leisure facilities, schools etc. to support additional development. The option may therefore result in the exclusion of those settlements (particularly rural ones) in which access to services (a WIMD domain) is an issue. However, Barry where deprivation is greatest would be included, and therefore it would be expected that these deprivation issues would be addressed. The level to which deprivation is addressed in these areas is dependent upon the type and level of development allocated to the various locations. |            |                |            |             |           |  |
| Mitigation   | Ensuring that employment opportunities, enhanced transport and regeneration initiatives are provided within close proximity to areas of deprivation will assist in meeting the SA objective.   |            |                |            |             |           |  |
| <b>5. To maintain, protect and enhance community spirit.</b> |  |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each SA Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +  | +          | 0              | +          | +           | +         |  |
| Commentary   | It would be expected that new developments would be designed to enhance community spirit through local distinctiveness and reduce the fear of crime.   |            |                |            |             |           |  |
| Mitigation   | Policies for ensuring new development is integrated into existing communities as well as the provision of new community facilities ,improved employment opportunities and affordable housing will make a positive contribution to community spirit.  |            |                |            |             |           |  |

| 6. To minimise the causes and manage the effects of climate change. |   |            |                |            |             |           |  |
|---|---|------------|----------------|------------|-------------|-----------|--|
|   | What is the predicted effect of the option on each SA Objective?  |            |                |            |             |           |  |
|   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +/-   | +/-        | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>   | <p>Provision of housing and employment in sustainable locations may reduce the need to travel and hence reduce greenhouse gas emissions from transport.</p> <p>Development will initially result in increased energy use during construction. The development of energy efficient buildings can help reduce operational energy requirements of new buildings.</p> <p>Issues relating to development in floodplains and effects on green sincs will be dependent upon the specific location of development although it should be noted that parts of Sully, Dinas Powys, Barry, Llandow and Pendoylan amongst others, are at risk of fluvial flooding. Additionally development in coastal areas may be affected by future sea level rise particularly in the low lying estuarine areas around Ogmores-by-Sea, Aberthaw, Barry and Penarth.</p>  |            |                |            |             |           |  |
| <b>Mitigation</b>   | <p>The location of housing within the plan is a key determinant in the success of the plan in supporting sustainable development; accordingly through this option the identification of settlements that provide for a range of locally accessed services and facilities would therefore provide a level of mitigation.</p> <p>Policies for the provision or enhancement of new facilities, energy efficient buildings and encouraging mixed use developments within the settlements identified would further enhance this option.</p> <p>In terms of coastal flooding, the effects of climate change on coastal settlements are unclear at this stage. However the locational policies of this option would ensure that development would not take place in undeveloped coastal areas.</p> <p>The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.</p> |            |                |            |             |           |  |
| 7. To minimise waste.   |   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each SA Objective?  |            |                |            |             |           |  |
|   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +   | +          | ?              | +          | +           | +         |  |
| <b>Commentary</b>   | <p>The amount of development is the same for all options and therefore the increase in the levels of waste generated will be the same. However, the South East Wales Regional Waste Plan and the Landfill Directive limits the levels of waste going to landfill. Similarly, National Planning Guidance will require the plan to identify preferred locations for new regional waste management facilities. Development could also result in the reuse of disused buildings, reducing waste construction material in both urban and rural areas.</p>  |            |                |            |             |           |  |
| <b>Mitigation</b>   | <p>Ensure that the plan includes a policy that requires the provision of recycling facilities within new developments, and promotes the sensitive reuse of existing buildings.</p>  |            |                |            |             |           |  |

| 8. To use land effectively and efficiently.                  |  |            |                |            |             |           |  |
|--|--|------------|----------------|------------|-------------|-----------|--|
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
| Performance  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +  | +/-        | 0              | +/-        | +/-         | +/-       |  |
| Commentary   | There is the opportunity to redevelop brownfield sites in urban areas, particularly Barry. Development in rural settlements would need to be within existing built up areas wherever possible to ensure that the countryside is protected from inappropriate development. However, this will depend upon the availability of land for development within settlement boundaries and the impact new development on available land would have on the character of the settlement. The option presents an opportunity to encourage good quality high-density developments in both urban and rural areas.   |            |                |            |             |           |  |
| Mitigation   | Policies encouraging high density developments particularly within the urban settlements will assist in ensuring that this objective is supported. However, in smaller rural settlements where residential densities are lower this could have a negative impact on their character. Therefore a strong emphasis on design would need to be applied. Invariably, the option will require the development of a proportion of Greenfield land where design policies could assist in mitigating against the impact on landscape etc.  |            |                |            |             |           |  |
| 9. To protect and enhance the built and natural environment. |  |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each SA Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +/-  | +/-        | 0              | +/-        | +/-         | +/-       |  |
| Commentary   | Protection of the natural environment is dependant on ensuring that development is focussed within settlement boundaries. Development/growth offers the opportunity to improve or enhance the quality of the built environment through regeneration and the integration of development within surrounding uses particularly in the larger urban settlements. The natural environment in and around settlements is likely to be adversely affected as development may affect biodiversity, landscape, soil function, water resource use and heritage. A number of rural settlements are located in special landscape areas, the character of which may be negatively affected by development. Furthermore, Rhoose, Barry and Sully are located in close proximity to the coastline, where growth and development may affect the coastal environment. There are SSSIs that may be affected along the Barry stretch of coastline as well as the candidate Severn Estuary SAC. |            |                |            |             |           |  |
| Mitigation   | Policies that promote good design and respect rural and urban settings will be required to ensure that development contributes positively to the built environment. However, the loss of green field sites adjoining existing settlements could harm the setting and character of some of the rural settlements, or special landscape areas. Accordingly, the location of development particularly where this is in close proximity to nature designations will need to be considered at the candidate site assessment stage, where this may have an impact on landscape and nature designations, appropriate mitigation measures will need to be identified and imposed through planning conditions/obligations.<br><br>The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.  |            |                |            |             |           |  |

|   |   |            |                |            |             |           |  |
|---|---|------------|----------------|------------|-------------|-----------|--|
| <b>10. To provide a high quality environment within all new developments.</b>   |   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each SA Objective?  |            |                |            |             |           |  |
|   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | ++  | +          | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>   | The extent to which this strategy will achieve this objective is dependent upon how development is carried out at project level. Development may result in the regeneration of areas such as Barry and the improvement of the existing built environment throughout the Vale of Glamorgan.  |            |                |            |             |           |  |
| <b>Mitigation</b>   | Policies that promote good design and respect rural and urban settings will be required to ensure that development contributes positively to the built environment. However, the loss of green field sites adjoining existing settlements could harm the setting and character of some of the rural settlements, or special landscape areas. Accordingly, the location of development particularly where this is in close proximity to nature designations will need to be considered at the candidate site assessment stage. Where this may have an impact on landscape and nature designations, ensure that appropriate mitigation measures are identified and imposed through planning conditions/obligations.   |            |                |            |             |           |  |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan’s culture and heritage.</b> |   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each SA Objective?  |            |                |            |             |           |  |
|   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +/-   | -          | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>   | There are a large number of historic buildings, designations and protected monuments in the Vale of Glamorgan. In urban centres, there are a number of listed buildings, conservation areas and ancient monuments, which sensitive development could enhance and promote. Growth will provide opportunities in urban areas to improve the quality of cultural and historic environments, particularly with regard to historic buildings. Although new development may offer the opportunity to enhance and promote the quality of the cultural/historic environment, there is a risk that development may be insensitive to these assets. There are heritage features of value in rural areas that may be affected by new development.  |            |                |            |             |           |  |
| <b>Mitigation</b>   | The extent to which this objective is supported will be reliant on stringent policies that promote good design. Policies that respect rural and urban settings will be required to ensure that development contributes positively to the built environment.<br>The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.   |            |                |            |             |           |  |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport.</b>                    |   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each SA Objective?  |            |                |            |             |           |  |
|   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +   | -          | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>   | Development in the main urban centres such as Barry and Penarth may reduce the need to travel and result in the use of more sustainable forms of transport. Most urban settlements are also accessible by existing national public transport links, particularly via the Cardiff-Bridgend rail service. It would be anticipated that the provision of housing and employment in rural settlements would attract local investment and therefore encourage residents to work locally. However, the majority of residents work away and are likely to continue to do so, as the jobs they have are unlikely to be provided within the local area. In larger centres, however, it may be possible to provide appropriate employment and reduce commuting. Through the sustainability test, residents of rural communities that lack appropriate facilities may have to continue travelling long distances to use facilities in other settlements. |            |                |            |             |           |  |
| <b>Mitigation</b>   | There is a need to ensure that the plan seeks the improvement to strategic links as well as those associated with localised development opportunities.  |            |                |            |             |           |  |

|  |  |            |                |            |             |           |  |
|--|--|------------|----------------|------------|-------------|-----------|--|
| <b>13. To provide for a diverse range of local job opportunities.</b>  |  |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each SA Objective?   |            |                |            |             |           |  |
|  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>   | +  | +          | 0              | +/-        | +           | +         |  |
| <b>Commentary</b>  | Development is likely to provide opportunities for employment in urban areas such as Barry and Penarth, where unemployment is an issue and where the greatest supply of employment land is located. In rural settlements there are a number of existing employment sites that may benefit from new housing development, but there may be limited opportunities for the development of new large employment sites within or adjoining settlements. Despite this, the option could provide small scale employment opportunities, which are more suited to rural settlements, and would support the findings of the Council's Employment Land Study (October 2007) which identified a high number of self employed persons in the rural Vale. Generally, job opportunities will be increased and could provide for a range of local employment opportunities under this option. |            |                |            |             |           |  |
| <b>Mitigation</b>  | The location of employment sites within the plan is the key to supporting this objective. Therefore mitigation measures would require smaller employment sites within rural areas as well as sites in the more highly populated areas.   |            |                |            |             |           |  |
| <b>14. To maintain and enhance the vitality and viability of the Vale of Glamorgan's town, district and local centres.</b> |  |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each SA Objective?   |            |                |            |             |           |  |
|  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>   | ++   | +/-        | 0              | +          | +           | +         |  |
| <b>Commentary</b>  | This option offers a significant opportunity to enhance the vitality and viability of the Vale's town, district and local centres that serve both urban and rural areas. There is an opportunity to make town centres attractive to local residents that shop outside of the Vale or use out-of-town retail developments. An increase in population, jobs and overall investment in a number of local centres should contribute positively to the vitality and viability of the centres. Locating developments where local service provision is good would assist in supporting individual rural shops and pubs which play an important role particularly in rural communities. However, services in smaller rural settlements where no development is proposed would not be supported.  |            |                |            |             |           |  |
| <b>Mitigation</b>  | To support this objective, policies that promote new retail development that would not undermine the vitality and viability of existing retail centres will be required. Similarly the protection of small rural services such as shops and pubs should assist those settlements where no development is planned.  |            |                |            |             |           |  |
| <b>15. To promote appropriate tourism.</b>   |  |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each SA Objective?   |            |                |            |             |           |  |
|  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>   | ?  | ?          | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>  | Due to the dispersed nature of development under this strategy, it is unlikely that specific tourism development will occur purely as a result of the strategy. Development in the various settlements may enhance or negatively affect any tourism assets in those areas, although it would be expected that planning policy design standards would seek limit negative effects.  |            |                |            |             |           |  |
| <b>Mitigation</b>  | In support of tourism, the plan should include policies that promote appropriate tourism development within both urban and rural areas. However, as identified above the location of new development could have a negative impact on the countryside therefore reducing potential tourism development.   |            |                |            |             |           |  |

| Performance |   |
|-------------|---|
| ++          | Option is highly likely to assist the Sustainability Objective                    |
| +           | Option is likely to assist the Sustainability Objective                           |
| 0           | Option is likely to have no effect on the Sustainability Objective                |
| -           | Option is likely to conflict with the Sustainability Objective                    |

| +/-         | Option is likely to assist and conflict with the Sustainability Objectives        |
| ?           | The effect of the Option on the Sustainability Objective is unclear               |
| +<br>-      | Are the benefits/effects short, long or medium term? ( 5, 10 and 15 year periods) |

**Option 3: Higher growth in the larger villages in rural areas (e.g. Llantwit Major, Cowbridge, St. Athan, Rhose and potentially others to be identified).**

|                            |  |            |                |            |             |           |  |
|----------------------------|--|------------|----------------|------------|-------------|-----------|--|
| <b>LDP STRATEGY OPTION</b> | <b>Option 3: Higher growth in the larger villages in rural areas (e.g. Llantwit Major, Cowbridge, St. Athan, Rhoose and potentially others to be identified).</b>  |            |                |            |             |           |  |
| <b>SA OBJECTIVE</b>        | <b>1. To provide the opportunity for people to meet their housing needs.</b>   |            |                |            |             |           |  |
|                            | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|                            | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>         | --   | +          | 0              | +/-        | +/-         | --        |  |
| <b>Commentary</b>          | <p>This option would address the lack of affordable and appropriate housing in the rural settlements identified. However, in the urban settlements of Barry and Penarth where affordable housing need is greatest (Vale of Glamorgan Local Housing Market Assessment 2008) the option would not address this need. Furthermore, concentrating development within the rural Vale would not remove the need for new development in the eastern vale where the population is greatest and where the majority of new household formation occurs.</p> <p>Limiting development within Barry, would reduce regeneration opportunities and would therefore undermine the potential for the LDP to support its role as a key settlement as identified in the Wales Spatial Plan.</p>    |            |                |            |             |           |  |
| <b>Mitigation</b>          | The ability to address housing needs in the Vale is reliant on ensuring land is allocated where need and future demand (as a result of household formation) exists. Therefore whilst planning policies could assist in addressing need in the settlements identified within this option it would not fully satisfy the delivery of this objective.   |            |                |            |             |           |  |
|                            | <b>2. To maintain, promote and enhance the range of local facilities.</b>  |            |                |            |             |           |  |
|                            | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|                            | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>         | --   | +          | 0              | +/-        | +/-         | -         |  |
| <b>Commentary</b>          | <p>This option would ensure that facilities in the four settlements identified remain viable, for example schools, doctors surgeries shopping facilities, thereby reducing the need to travel to nearby settlements for such facilities. It is assumed that growth will include the delivery of appropriate, additional local facilities in these settlements.</p> <p>Although additional facilities are less likely to be developed in other rural settlements, they would benefit from those provided in the identified settlements.</p> <p>It is considered that the continued regeneration of Barry would be severely restricted as a result of limited new development opportunities, which could result in the decline of existing town and district retail centres.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>          | The inclusion of policies for ensuring that appropriate community facilities are provided as part of any new development, and that existing community facilities are safeguarded would assist in meeting this objective.   |            |                |            |             |           |  |

| 3. To maintain and improve access for all.            |   |            |                |            |             |           |  |
|---|---|------------|----------------|------------|-------------|-----------|--|
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|   | --  | +/-        | 0              | +/-        | +/-         | -         |  |
| Commentary  | <p>Growth in the settlements identified will result in improving the built environment for the Vale's rural population as well as improving access to services and facilities. However, this may not be the case for smaller rural settlements. Increased development presents an opportunity for sensitive locational design to ensure that developments are located in accessible locations.</p> <p>However, in the urban centres improvements brought about through new development and regeneration initiatives would not be realised under this option, and as such the existing environment could also deteriorate.</p> |            |                |            |             |           |  |
| Mitigation  | Design policies within the LDP and Building regulations would provide the key mitigation tool for all new development.  |            |                |            |             |           |  |
| 4. Reduce the causes of deprivation.                  |   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|   | --  | +/-        | 0              | -          | -           | -         |  |
| Commentary  | High levels of multiple deprivation are observed mainly in and around Barry, and as such these communities would not benefit from development opportunities that could assist in addressing deprivation. The option may therefore result in the exclusion of those settlements (particularly rural ones) in which access to services (a WIMD domain) is an issue.   |            |                |            |             |           |  |
| Mitigation  | It would be difficult to develop policies that could assist in addressing social and economic deprivation when the strategy option itself seeks to focus development primarily within the rural Vale, when deprivation is highest in the urban eastern vale.  |            |                |            |             |           |  |
| 5. To maintain, protect and enhance community spirit. |   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|   | ?   | +/-        | 0              | +/-        | +/-         | +/-       |  |
| Commentary  | Development provides an opportunity to promote local distinctiveness, reduce the fear of crime and provide community facilities to enhance community spirit. As this option focuses development in rural settlements, benefits will be realised mainly in rural areas and not in urban communities. However, the option could result in development impacting on the character of rural settlements which could invariably harm rather than enhance community spirit.   |            |                |            |             |           |  |
| Mitigation  | Policies for ensuring that new development is integrated into existing communities as well as the provision of new community facilities ,improved employment opportunities and affordable housing will make a positive contribution within the settlements identified.  |            |                |            |             |           |  |

| 6. To minimise the causes and manage the effects of climate change. |   |            |                |            |             |           |   |
|---|---|------------|----------------|------------|-------------|-----------|---|
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |   |
| Performance   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |   |
|   |   | 0          | +/-            | 0          | ?           | ?         | ? |
| Commentary  | Provision of housing and employment in these rural towns may reduce the need to travel and hence reduce greenhouse gas emissions from transport. Development will initially result in increased energy use during construction. The development of energy efficient buildings can help reduce the operational energy requirements of new buildings. Issues relating to development on floodplains and effects on green sincs will depend upon the specific location of development. Additionally development in coastal areas may be affected by future sea level rise particularly in the low lying estuarine areas around Ogmores-by-Sea and Aberthaw.  |            |                |            |             |           |   |
| Mitigation  | National Planning Guidance would determine the location of development by directing housing away from areas that are known to be at risk of flooding. Similarly, increased energy efficient building regulations would limit the impact of new development on climate change, although the locational policies of this option would undermine any benefits.<br><br>In terms of coastal flooding, the effects of climate change on coastal settlements is unclear at this stage. However the locational policies of this option would ensure that development would not take place in undeveloped coastal areas.<br><br>The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation. |            |                |            |             |           |   |
| 7. To minimise waste.   |   |            |                |            |             |           |   |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |   |
| Performance   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |   |
|   | +   | +          | +              | +          | +           | +         |   |
| Commentary  | The amount of proposed development is the same for all options and therefore the increase in the levels of waste generated will be the same. However, the South East Wales Regional Waste Plan and the Landfill Directive limits the levels of waste going to landfill. Similarly, National Planning Guidance will require the plan to identify preferred locations for new regional waste management facilities. Consequently, this option would inherently make a positive contribution to reducing waste arisings within the Vale of Glamorgan. In addition, development could result in the reuse of disused buildings, reducing waste construction material in both urban and rural areas.   |            |                |            |             |           |   |
| Mitigation  | Ensure that the plan includes a policy that requires the provision of recycling facilities within new developments, and promote the sensitive reuse of existing buildings.  |            |                |            |             |           |   |
| 8. To use land effectively and efficiently.                         |   |            |                |            |             |           |   |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |   |
| Performance   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |   |
|   | -   | -          | 0              | -          | -           | -         |   |
| Commentary  | There may not be large areas of previously developed land available in some of these rural settlements (with the exception of St Athan). As a result, it is likely that most of the new development will be located on greenfield land outside settlement boundaries. Efficient use of land can be achieved through good quality high-density development.  |            |                |            |             |           |   |
| Mitigation  | Policies to encourage the reuse of Brownfield sites over Greenfield sites may be limited due to the availability of Brownfield sites in the rural Vale. The encouragement of high density development may not be suited to all settlements. This could conflict with the character of traditional villages where building densities are generally lower.  |            |                |            |             |           |   |

| 9. To protect and enhance the built and natural environment.           |   |            |                |            |             |           |   |
|--|---|------------|----------------|------------|-------------|-----------|---|
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |   |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |   |
|  |   | 0          | -              | 0          | -           | -         | - |
| Commentary   | The environment surrounding the rural settlements where development would take place is likely to be adversely affected as development may affect biodiversity, landscape, soil function, water resource use and heritage. A number of rural settlements are located in special landscape areas, the character of which may be negatively affected by development. In general, growth through sensitive development would be expected to enhance the quality of the built environment in these settlements. |            |                |            |             |           |   |
| Mitigation   | Policies that promote good design and respect both rural and urban settings will be required to ensure that development contributes positively to the built environment. The location of development particularly where this is in close proximity to nature designations will need to be considered at the candidate site assessment stage. Where negative impacts on nature designations are identified, ensure that appropriate mitigation measures are imposed through planning conditions/obligations. |            |                |            |             |           |   |
| 10. To provide a high quality environment within all new developments. |   |            |                |            |             |           |   |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |   |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |   |
|  | 0   | +          | 0              | ?          | ?           | ?         |   |
| Commentary   | The extent to which this strategy will achieve this objective is dependent upon how development is carried out at project level. Development may result in the improvement of the existing built environment in these rural settlements and the integration of new development may act as a catalyst for overall environmental improvements.  |            |                |            |             |           |   |
| Mitigation   | The extent to which this objective is supported will be reliant on stringent policies that promote good design. Policies that to seek to protect and enhance rural and urban settings will be required to ensure that development contributes positively to the built environment.<br><br>The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.  |            |                |            |             |           |   |

|   |   |            |                |            |             |           |  |
|---|---|------------|----------------|------------|-------------|-----------|--|
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage.</b> |   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| <b>Performance</b>  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|   | 0   | -          | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>   | There are a large number of historic buildings, designations and protected monuments in the rural Vale that may be affected by development in these settlements. In particular there are significant numbers of listed buildings in Llantwit Major and Cowbridge. Although new development may offer the opportunity to enhance and promote the quality of the cultural/historic environment, there is a risk that development may be insensitive to these assets. There are heritage features of value in rural areas that may be affected by new development.   |            |                |            |             |           |  |
| <b>Mitigation</b>   | Policies that promote good design and respect rural and urban settings will be required to ensure that development contributes positively to the built environment. Similarly, policies for the protection of conservation areas and historic environments will ensure that this option makes a positive contribution to this SA objective.<br><br>The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.   |            |                |            |             |           |  |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport.</b>                    |   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| <b>Performance</b>  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|   | 0   | +/-        | 0              | ?          | ?           | +         |  |
| <b>Commentary</b>   | The level to which this option achieves this sustainability objective is dependent upon the policies governing delivery. Residents in smaller rural settlements would need to continue travelling to the larger settlement to access some facilities. Furthermore, Rhoose and Llantwit Major are the only settlements in this option to benefit from rail stations on the Vale of Glamorgan Railway Line. There is no rail service available in other rural settlements. There may be an opportunity to improve bus services in settlements where bus service provision is considered to be poor (e.g. Aberthaw (West), Cog, Penmark, Colwinston and Penllyn amongst others). |            |                |            |             |           |  |
| <b>Mitigation</b>   | There is a need to ensure that planning policies seek to secure appropriate contributions for public transport provision, especially between settlements to ensure that this objective is met. Whilst securing local services may be appropriate, the level of development within each settlement may not be sufficient to achieve this.  |            |                |            |             |           |  |
| <b>13. To provide for a diverse range of local job opportunities.</b>   |   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| <b>Performance</b>  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|   | -   | -          | 0              | -          | -           | -         |  |
| <b>Commentary</b>   | Unemployment is not a key issue in rural settlements. Most residents do not live and work in the same settlement and some work outside the Vale of Glamorgan. This option could provide an opportunity to create small scale local employment sites. In urban areas such as Barry and Penarth, where unemployment is a key issue, the creation of job opportunities would be limited under this option.   |            |                |            |             |           |  |
| <b>Mitigation</b>   | The location of employment sites is key to supporting this objective. However if employment is limited mainly to the rural Vale opportunities would mainly be restricted to key employment sites at Rhoose Airport, St Athan and Llandow.   |            |                |            |             |           |  |

| 14. To maintain and enhance the vitality and viability of the Vale of Glamorgan's town, district and local centres. |  |            |                |            |             |           |
|---|--|------------|----------------|------------|-------------|-----------|
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |
| Performance   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |
|   | -  | +          | 0              | +/-        | +/-         | +/-       |
| Commentary  | <p>This option would maintain the vitality and viability of these four settlements. However, other town, district and local centres in the Vale of Glamorgan in need of regeneration, would not benefit from this option.</p> <p>There is an opportunity to make these town centres attractive to local residents that currently use retail facilities in larger settlements. It is assumed that local community and leisure facilities will be provided together with new housing and employment. An increase in population, jobs and overall investment in a number of local centres should contribute positively to the vitality and viability of the centres, particularly in rural settlements.</p> |            |                |            |             |           |
| Mitigation  | To support this objective, policies that promote new retail development that would not undermine the vitality and viability of existing retail centres will be required. Similarly the protection of small rural services such as shops and pubs will further support this objective.  |            |                |            |             |           |
| 15. To promote appropriate tourism.   |  |            |                |            |             |           |
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |
| Performance   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |
|   | -  | +/-        | 0              | +/-        | +/-         | +/-       |
| Commentary  | Tourism development in these settlements will depend upon the businesses that start up as growth continues. Development in the various settlements may enhance or negatively affect any tourism assets in those areas, although it is anticipated that design policies would seek to limit negative effects. This option would not however enable the plan to capitalise on regeneration within the urban centres which could enhance the tourism appeal of the Vale of Glamorgan.   |            |                |            |             |           |
| Mitigation  | In order to support tourism, the plan should include policies that promote appropriate tourism development. However, with the majority of new development being undertaken within the rural vale this could have a negative impact on the countryside therefore potentially reducing tourism opportunities.  |            |                |            |             |           |

| Performance |   |
|-------------|---|
| ++          | Option is highly likely to assist the Sustainability Objective                    |

| +<br>-      | Are the benefits/effects short, long or medium term? ( 5, 10 and 15 year periods) |

**Option 4: A rural new settlement able to promote sustainable self – containment.**

(It is assumed that for a new settlement to be self contained it would consist of a minimum of 4,000 to 5,000 dwellings in order to provide for a range of services and facilities, with any remaining housing requirements provided through extant planning permissions and windfall development)

|   |   |            |                |            |             |           |  |
|---|---|------------|----------------|------------|-------------|-----------|--|
| <b>LDP STRATEGY OPTION</b>  | <b>Option 4: A rural new settlement able to promote sustainable self – containment. (It is assumed that for a new settlement to be self contained it would consist of a minimum of 4,000 to 5,000 dwellings in order to provide for a range of services and facilities, with any remaining housing requirements provided through extant planning permissions and windfall development)</b>  |            |                |            |             |           |  |
| <b>SA OBJECTIVE</b>   | 1. To provide the opportunity for people to meet their housing needs.   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
|   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | -   | +/-        | 0              | +/-        | +/-         | -         |  |
| <b>Commentary</b>   | <p>It is likely that a new settlement would be located within the rural Vale. Therefore the majority of housing would be located away from the urban areas where the greatest affordable housing need has been identified (Vale of Glamorgan Local Housing Market Assessment 2008) and where household formation and population growth would also result in the highest demand for new housing. Under this option, new housing in urban settlements would be limited. As a result households could move elsewhere to meet their housing needs (e.g. new rural settlement), resulting in increased house prices in areas of greatest demand, which in turn could perpetuate existing affordable housing needs.</p> <p>Limiting development within Barry, would also reduce regeneration opportunities and would therefore undermine the potential for the LDP to support its role as a key settlement as identified in the Wales Spatial Plan.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>   | Policies for securing an appropriate housing mix (affordable and market housing) would assist in supporting the SA objective. However as identified above this would be limited in areas where affordable housing need and future demand would be greatest. Therefore higher targets would be required on a limited number of sites in Barry etc, which could limited site viability. Also, development pressures would continue in the Eastern Vale, where windfall sites would be relied on to meet demand, thus undermining the plan and the manage and monitor ethos of the land use planning system.   |            |                |            |             |           |  |
| <b>2. To maintain, promote and enhance the range of local facilities.</b> |   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
|   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +/-   | +/-        | 0              | +/-        | +/-         | -         |  |
| <b>Commentary</b>   | The option will only affect areas close to the chosen location and will not address issues of wider access to facilities throughout the Vale of Glamorgan. It is assumed that the facilities in the new development would be accessible and fit-for-purpose for their catchment. The option may result in the under use of similar facilities in surrounding areas. Alternatively if facilities within the new development are insufficient other centres in close proximity to the new development could experience pressure on their existing facilities e.g. St. Athan.  |            |                |            |             |           |  |
| <b>Mitigation</b>   | The inclusion of policies for ensuring that appropriate community facilities are provided as part of any new development, and existing community facilities are safeguarded would assist in meeting this objective. However, as indicated above, the option could lead to redevelopment pressures on existing facilities as a consequence of under use/viability.   |            |                |            |             |           |  |

|  |   |            |                |            |             |           |  |
|--|---|------------|----------------|------------|-------------|-----------|--|
| <b>3. To maintain and improve access for all.</b>            |   |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | 0   | +/-        | 0              | +/-        | +/-         | +         |  |
| Commentary   | A new settlement could provide the opportunity to develop a well designed and accessible environment for its residents. However, such opportunities would be limited elsewhere, therefore reducing the plan's ability to support the SA objective for the benefit of the wider population. It should be noted that in the early stages of the plan period, residents of the new settlement may not enjoy the full range of benefits that a new settlement will provide. During this period residents could be at a disadvantage and could place added pressure on existing services and facilities in nearby settlements. |            |                |            |             |           |  |
| Mitigation   | Whilst there may be scope to set policies to secure new facilities through planning obligations it is likely that these would be limited in the rural vale where levels of development would not justify the provision of new facilities. Appropriate phasing mechanisms will need to be considered to ensure facilities and services are provided in tandem with the occupation of new dwellings.  |            |                |            |             |           |  |
| <b>4. Reduce the causes of deprivation.</b>                  |   |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | -   | 0          | 0              | -          | -           | -         |  |
| Commentary   | A single new settlement will not address deprivation and isolation issues throughout much of the Vale of Glamorgan, especially in urban areas where the majority of the problems exist. Limited development opportunities in areas of need could potentially increase deprivation indicators.   |            |                |            |             |           |  |
| Mitigation   | It would be difficult to develop policies that could assist in addressing social and economic deprivation within areas of need, when the strategy option itself seeks to focus development primarily within the rural Vale, and deprivation is highest in the urban eastern vale.   |            |                |            |             |           |  |
| <b>5. To maintain, protect and enhance community spirit.</b> |   |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +/-   | +/-        | 0              | +/-        | +/-         | +/-       |  |
| Commentary   | A new settlement has the potential to be well designed in order to reduce crime, provide facilities, encourage local distinctiveness and community ownership in the long term. However, this would only apply to the local area and have no benefits to other areas. Limited development opportunities in areas of deprivation could have a negative impact on community spirit as could demand for services in other settlements in the early stages of development of the new settlement.   |            |                |            |             |           |  |
| Mitigation   | Policies for ensuring new development is integrated into existing communities including the provision of new community facilities ,improved employment opportunities and affordable housing which will make a positive contribution within the identified settlements.  |            |                |            |             |           |  |

| 6. To minimise the causes and manage the effects of climate change. |   |            |                |            |             |           |  |
|---|---|------------|----------------|------------|-------------|-----------|--|
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
|   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +/-   | -          | 0              | -          | -           | +/-       |  |
| <b>Commentary</b>   | <p>The development of a new settlement without new employment opportunities would increase greenhouse gas emissions and energy use as it would also increase car use to and from the new settlement. A new settlement would nevertheless provide opportunities for applying the latest building codes to increase energy efficiency and decrease carbon emissions. However these benefits would be negligible if residents were reliant on travelling to work and other essential services by car, and would only be accrued at the latter stages of the development when the majority of services and facilities would be provided on site.</p> <p>Elsewhere, the level of development envisaged would limit opportunities to enhance public transport facilities, particularly in the most populated settlements where the benefits of new development are needed.</p> <p>The impact on floodplains would depend on the exact location of development. i.e. if located in coastal areas, particularly in the low lying estuarine areas around Ogmores-by-Sea, Aberthaw, Barry and Penarth, the new settlement may be affected by future sea level rise.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>   | <p>The location of any new development is a key determinant in the success of the plan in supporting measures that address climate change. Subsequently, to meet this objective the plan would need to ensure that the new settlement had adequate public transport facilities at the earliest stages, along with a suitable range of services and facilities for residents. In addition, employment opportunities in close proximity to the new settlement will be essential. This could be achieved by allocating employment land within the development and promoting home working.</p> <p>The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.</p>  |            |                |            |             |           |  |
| 7. To minimise waste.   |   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
|   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +/-   | +/-        | ?              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>   | <p>The amount of proposed development is the same for all options and therefore the increase in the levels of waste generated will be the same. However, the South East Wales Regional Waste Plan and the Landfill Directive limits the levels of waste going to landfill. Similarly, National Planning Guidance will require the plan to identify preferred locations for new regional waste management facilities. Whilst the options would therefore make a positive contribution to reducing waste arisings within the Vale of Glamorgan, a new settlement could place pressure on the delivery of recycling services.</p>  |            |                |            |             |           |  |
| <b>Mitigation</b>   | <p>Ensure that the plan includes a policy that requires the provision of recycling facilities within new developments.</p>  |            |                |            |             |           |  |
| 8. To use land effectively and efficiently.                         |   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
|   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | -   | --         | 0              | +/-        | -           | -         |  |
| <b>Commentary</b>   | <p>A new rural settlement is likely to rely on the development of Greenfield land, resulting in the loss of agricultural land, which would have an adverse effect on the countryside and landscape. Whilst Brownfield land could be developed in other settlements this would undermine the delivery of this option.</p>  |            |                |            |             |           |  |
| <b>Mitigation</b>   | <p>The ability to mitigate against the negative impacts identified is limited by the strategic option, which will inevitably lead to the development of Greenfield sites.</p>   |            |                |            |             |           |  |

| 9. To protect and enhance the built and natural environment.   |   |            |                |            |             |           |  |
|--|---|------------|----------------|------------|-------------|-----------|--|
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | 0   | +/-        | 0              | +/-        | +/-         | +/-       |  |
| Commentary   | The development is likely to adversely affect biodiversity, landscape, soil function, water resource use and heritage in the vicinity of the new settlement. The level of impact would depend on the location of the new settlement.  |            |                |            |             |           |  |
| Mitigation   | Policies that promote good design and respect both rural and urban settings will be required to ensure that development contributes positively to the built environment. The location of development (particularly where it is in close proximity to nature designations) will need to be considered at the candidate site assessment stage. Where this may have an impact on nature designations ensure that appropriate mitigation measures are identified and imposed through planning conditions/obligations.   |            |                |            |             |           |  |
| 10. To provide a high quality environment within all new developments.   |   |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +/-   | +/-        | 0              | +/-        | +/-         | +/-       |  |
| Commentary   | Development of the new settlement should be well-designed from the outset in order to include high quality, sustainable materials, make efficient use of open space, access etc. and therefore promote a positive community spirit. The development of the new settlement in this manner could set a precedent for development elsewhere in the Vale of Glamorgan. However, such development would be primarily windfall which could lead to detrimental impacts on the built and natural environment.              |            |                |            |             |           |  |
| Mitigation   | Policies that promote good design and respect both rural and urban settings will be required to ensure that development contributes positively to the built environment. The location of development (particularly where this is in close proximity to nature designations) will need to be considered at the candidate site assessment stage, where this may have an impact on nature designations ensure that appropriate mitigation measures are identified and imposed through planning conditions/obligations. |            |                |            |             |           |  |
| 11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage. |   |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | 0   | +/-        | 0              | +/-        | +/-         | +/-       |  |
| Commentary   | The development is likely to adversely affect landscape and heritage value in its immediate area. However, it would deflect development from the remaining rural area and therefore offer them some protection from development pressure.   |            |                |            |             |           |  |
| Mitigation   | The location of development (particularly where this is in close proximity to nature designations) will need to be considered at the candidate site assessment stage. Where this may have an impact on nature designations ensure that appropriate mitigation measures are identified and imposed through planning conditions/obligations.  |            |                |            |             |           |  |

|  |   |            |                |            |             |           |  |
|--|---|------------|----------------|------------|-------------|-----------|--|
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport.</b>                         |   |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | 0   | -          | ?              | +          | -           | -         |  |
| Commentary   | Whilst the settlement may be self contained in the short-term, it is likely that over time it will generate wider traffic congestion through in and out-commuting. Much depends upon the exact location with respect to existing and proposed public transport links. However, considering other new settlements in the UK, it is unlikely that this would address issues relating to the dependence on private cars in rural areas, nor is it likely to reduce the need to travel to existing major urban centres for higher value services.   |            |                |            |             |           |  |
| Mitigation   | The location of any new development within the plan is a key determinant in the success of the plan in supporting measures that address climate change. Subsequently, to meet this objective the plan would need to ensure that adequate public transport facilities are provided at the earliest stages, along with a suitable range of services and facilities for residents.   |            |                |            |             |           |  |
| <b>13. To provide for a diverse range of local job opportunities.</b>  |   |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | -   | +/-        | 0              | -          | -           | +/-       |  |
| Commentary   | If the settlement is sustainable and self-contained, it is assumed that it would provide local employment opportunities in the area of development and its surroundings. However, the Council's Employment Land Study (October 2007) suggests that the majority of employment demand is for small scale business premises, with highest demand being in Barry (where current employment land supply is greatest). Therefore, a new settlement in itself would not assist in providing a diverse range of employment opportunities locally and would undermine areas best suited to new employment uses. |            |                |            |             |           |  |
| Mitigation   | The location of any new development is a key determinant in the success of the plan in supporting the sustainability objectives. On the basis of the above it would be difficult to mitigate against the negative impacts identified.   |            |                |            |             |           |  |
| <b>14. To maintain and enhance the vitality and viability of the Vale of Glamorgan's town, district and local centres.</b> |   |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | --  | +/-        | 0              | +/-        | +/-         | -         |  |
| Commentary   | The new settlement has the potential to be well-designed to ensure its own vitality and viability. However, this largely depends upon the exact design of the development. It will not address vitality and viability problems that exist in some of the other centres in the Vale of Glamorgan, notably in the urban south east. This may adversely affect nearby settlements as existing residents may use facilities provided in the new settlement.   |            |                |            |             |           |  |
| Mitigation   | The location of any new development is a key determinant in the success of the plan in supporting the sustainability objectives. On the basis of the above it would be difficult to mitigate against the negative impacts identified.   |            |                |            |             |           |  |

| 15. To promote appropriate tourism. |  |            |                |            |             |           |   |
|-------------------------------------|--|------------|----------------|------------|-------------|-----------|---|
|                                     | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |   |
| Performance                         | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |   |
|                                     |  | -          | -              | 0          | -           | -         | - |
| Commentary                          | The development of a new settlement is unlikely to significantly affect tourism in the Vale of Glamorgan as a whole, and could reduce opportunities for the development of tourism related regeneration in Barry. The potential impact on the vitality and viability of existing centres as identified against objective 14 could also harm the tourism appeal of the Vale of Glamorgan. It would however, provide a degree of protection for the rural Vale, which is a tourism asset in itself- although this would also reduce rural tourism opportunities. |            |                |            |             |           |   |
| Mitigation                          | In support of tourism, the plan should include policies that promote appropriate tourism development. However, the location of any new development within the plan is a key determinant in its success of the plan in supporting the sustainability objectives. On the basis of the above its would be difficult to mitigate against the negative impacts identified.  |            |                |            |             |           |   |

| Performance |   |
|-------------|---|
| ++          | Option is highly likely to assist the Sustainability Objective                    |
| +           | Option is likely to assist the Sustainability Objective                           |
| 0           | Option is likely to have no effect on the Sustainability Objective                |
| -           | Option is likely to conflict with the Sustainability Objective                    |
| --          | Option is highly likely to conflict with the Sustainability Objective             |
| +/-         | Option is likely to assist and conflict with the Sustainability Objectives        |
| ?           | The effect of the Option on the Sustainability Objective is unclear               |
| +<br>-      | Are the benefits/effects short, long or medium term? ( 5, 10 and 15 year periods) |

**Option 5: Concentrate development opportunities in Barry and the South East Zone. The St.Athan area to be a key development opportunity. Other sustainable settlements to accommodate further housing and associated development.**

|   |  |            |                |            |             |           |  |
|---|--|------------|----------------|------------|-------------|-----------|--|
| <b>LDP STRATEGY OPTION</b>  | <b>Option 5: Concentrate development opportunities in Barry and the South East Zone. The St.Athan area to be a key development opportunity. Other sustainable settlements to accommodate further housing and associated development.</b>   |            |                |            |             |           |  |
| <b>SA OBJECTIVE</b>   | <b>1. To provide the opportunity for people to meet their housing needs.</b>   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | ++   | +          | 0              | +          | +           | +         |  |
| <b>Commentary</b>   | The option will provide new housing opportunities within the largest urban settlements located within the South East Zone, including Barry, as well as the larger rural towns and villages. The Council's Local Housing Market (2008) highlights that the highest demand for affordable housing is within Barry, followed by Penarth and the coastal towns. It is anticipated that demand for new housing will come primarily from household formation and therefore the strategy will assist in providing housing opportunities where they will best serve local needs. |            |                |            |             |           |  |
| <b>Mitigation</b>   | To ensure that the SA objective is addressed, there will a requirement within the LDP to ensure that an appropriate mix of housing is provided within new housing developments to meet the needs identified within the Local Housing Market Assessment. Furthermore, by providing for a range of sites, there is the potential for ensuring that site allocations reflect the levels of housing need required.   |            |                |            |             |           |  |
| <b>2. To maintain, promote and enhance the range of local facilities.</b> |  |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | ++   | +          | 0              | +          | +           | +         |  |
| <b>Commentary</b>   | In both rural and urban settlements the option will provide the opportunity for a range of new services to be procured as part of new developments. Also the identification of sustainable settlements will ensure that there are adequate local facilities available to support development in its early stages where the provision of new facilities is generally not viable.  |            |                |            |             |           |  |
| <b>Mitigation</b>   | It will be essential to ensure that there is sufficient service capacity to cope with increases in populations, for example in St Athan and Llantwit Major.  |            |                |            |             |           |  |
| <b>3. To maintain and improve access for all.</b>                         |  |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | ++   | +          | 0              | +          | +           | +         |  |
| <b>Commentary</b>   | The wider distribution of development under this option should help to improve access to services and facilities and decrease isolation particularly in the rural Vale. New development would be located in accessible locations. Planning policy and building regulations would set minimum design standards to ensure that buildings are designed to be accessible to all.   |            |                |            |             |           |  |
| <b>Mitigation</b>   | Design policies within the LDP and Building regulations would provide the key mitigation tools for all development and would further reinforce the positive outcome that the strategy option offers.   |            |                |            |             |           |  |

| 4. Reduce the causes of deprivation.                  |  |            |                |            |             |           |   |
|---|--|------------|----------------|------------|-------------|-----------|---|
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |   |
| Performance   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |   |
|   |  | ++         | +              | 0          | +           | +         | + |
| Commentary  | <p>High levels of multiple deprivation are observed mainly in and around Barry as detailed in the Welsh Index of Multiple Deprivation. The option therefore presents an opportunity to address deprivation through regeneration in Barry. It will also help address issues such as isolation and access to services outside of the larger rural settlements.</p> <p>Barry is identified as a key settlement in the Wales Spatial Plan. This option recognises Barry as a strategic location which will assist in securing funding for regeneration initiatives that can also address deprivation in the town. It should be noted that St Athan is also identified in the Wales Spatial Plan as a Strategic Opportunity Area and therefore this option allows for the capitalisation of economic development growth opportunities, which will further contribute towards meeting this SA objective.</p> |            |                |            |             |           |   |
| Mitigation  | The option has the potential to meet local employment needs providing the plan includes intervention measures that will utilise existing employment land opportunities. Similarly, policies for enhancing rural employment through rural diversification, conversion of rural buildings for business use and homeworking should also be considered.  |            |                |            |             |           |   |
| 5. To maintain, protect and enhance community spirit. |  |            |                |            |             |           |   |
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |   |
| Performance   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |   |
|   | +  | +          | 0              | +          | +           | +         |   |
| Commentary  | Growth in these intervention areas may contribute to community spirit through an increase in development of facilities, good design and a reduction in the fear of crime where this is an issue.   |            |                |            |             |           |   |
| Mitigation  | Policies for ensuring new development is integrated into existing communities as well as the provision of new community facilities ,improved employment opportunities and affordable housing will make a positive contribution to community spirit.  |            |                |            |             |           |   |

| 6. To minimise the causes and manage the effects of climate change. |   |            |                |            |             |           |  |
|---|---|------------|----------------|------------|-------------|-----------|--|
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
|   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | ++  | ++         | 0              | +          | +           | +         |  |
| <b>Commentary</b>   | The option promotes additional development in the towns and villages with good access to services and facilities locally which will assist in addressing carbon emissions from transport.   |            |                |            |             |           |  |
| <b>Mitigation</b>   | <p>The development of stringent energy efficient standards for new buildings will assist to mitigate against the contribution that new development and increased energy consumption has on climatic factors. However, the plan should consider setting higher energy efficiency standards than the minimum required through the Code for Sustainable Homes.</p> <p>The Candidate site assessment would assist in ensuring that development is situated away from sensitive areas. However, National Planning Guidance will determine the location of development within areas that are known to be at risk of flooding.</p> <p>In terms of coastal flooding, the effects of climate change on coastal settlements is at this stage unclear, however the locational policies of this option would ensure that development would not take place in undeveloped coastal areas.</p> |            |                |            |             |           |  |
| 7. To minimise waste.   |   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
|   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +/-   | +/-        | ?              | +/-        | +           | +         |  |
| <b>Commentary</b>   | The amount of proposed development is the same for all options and therefore the increase in the levels of waste generated will be the same. However, the South East Wales Regional Waste Plan and the Landfill Directive limits govern the amount of waste going to landfill. Similarly, National Planning Guidance will require the Plan to identify preferred locations for new regional waste management facilities. Consequently, this option would inherently make a positive contribution to reducing waste arisings within the Vale of Glamorgan. In addition, development could result in the reuse of disused buildings, reducing waste construction material in both urban and rural areas.  |            |                |            |             |           |  |
| <b>Mitigation</b>   | Ensure that the plan includes a policy that requires the provision of recycling facilities within new developments, and promote the sensitive reuse of existing buildings   |            |                |            |             |           |  |

| 8. To use land effectively and efficiently.                  |   |            |                |            |             |           |  |
|--|---|------------|----------------|------------|-------------|-----------|--|
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | ++  | +/-        | 0              | +          | +           | +/-       |  |
| Commentary   | As development is mainly focused in existing urban areas, there is high potential for previously developed land to be used, particularly in Barry. It is anticipated that a large proportion of development (both housing and employment) at St Athan will use previously developed land. Development in rural settlements would need to be within existing built up areas wherever possible, to ensure that the countryside is protected from inappropriate development. The option also presents the opportunity to encourage good quality high-density developments in both urban and rural areas.   |            |                |            |             |           |  |
| Mitigation   | <p>Include policies to favour the reuse of Brownfield sites over Greenfield sites. However this maybe limited due to the availability of Brownfield sites in the rural Vale and could reduce significantly over the plan period. However, the identification of sustainable settlements could in the long-term offset the loss of Greenfield land through the positive contribution towards climate change that development in sustainable locations would provide.</p> <p>The candidate site assessment would assist in ensuring that development is situated away from sensitive areas.</p> <p>The encouragement of high density development may not be suited to all settlements. For example, this is likely to be an issue in rural villages where building densities are generally lower. Accordingly, the plan should also impose stringent design standards.</p>      |            |                |            |             |           |  |
| 9. To protect and enhance the built and natural environment. |   |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +   | +          | 0              | +/-        | +/-         | +/-       |  |
| Commentary   | The option is likely to have positive effects, particularly in urban areas, as development can bring physical regeneration to areas in need of improvement provided it is properly integrated. The natural environment in and around these settlements could be adversely affected as development may have an impact on biodiversity, landscape, soil function, water resource use and heritage. A number of rural settlements are located in special landscape areas, the character of which may be negatively affected by development. Furthermore, Rhoose, Barry and Sully are located in close proximity to the coastline, where growth and development may affect the coastal environment. There are SSSIs that may be affected along the Barry stretch of coastline as well as the candidate Severn Estuary SAC.  |            |                |            |             |           |  |
| Mitigation   | <p>Policies that promote good design and respect rural and urban settings will be required to ensure that development contributes positively to the built environment. However, the loss of green field sites adjoining existing settlements could harm the setting and character of some of the rural settlements, or special landscape areas. Accordingly, the location of development particularly where it is in close proximity to nature designations will need to be considered at the candidate site assessment stage. Where this may have an impact on landscape and nature designations ensure that appropriate mitigation measures are identified and imposed through planning conditions/obligations.</p> <p>The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.</p> |            |                |            |             |           |  |

| 10. To provide a high quality environment within all new developments.   |  |            |                |            |             |           |  |
|--|--|------------|----------------|------------|-------------|-----------|--|
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| Performance  | +  | +          | 0              | +/-        | +           | +         |  |
| Commentary   | There is the opportunity to ensure that new development is well-designed from the outset in order to include high quality, sustainable materials, make efficient use of open space, access etc and can promote a positive community spirit. This will apply to all intervention areas spread across the Vale of Glamorgan.   |            |                |            |             |           |  |
| Mitigation   | Policies that promote good design and respect rural and urban settings will be required to ensure that development contributes positively to the built environment.  |            |                |            |             |           |  |
| 11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage. |  |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
| Performance  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +  | +/-        | 0              | +/-        | +           | +         |  |
| Commentary   | There are a large number of historic buildings, designations and protected monuments in the Vale of Glamorgan. In urban centres, there are a number of listed buildings, conservation areas and ancient monuments, which sensitive development could enhance and promote. Growth will provide the opportunities in urban areas to improve the quality of cultural and historic environments, particularly with regard to historic buildings. Although new development may offer the opportunity to enhance and promote the quality of the cultural/historic environment, there is the risk that development may be insensitive to these assets. There are heritage features of value in rural areas that may be affected by new development.   |            |                |            |             |           |  |
| Mitigation   | Policies that promote good design and respect rural and urban settings will be required to ensure that development contributes positively to the built environment. Similarly, policies for the protection of conservation areas and historic environments will ensure that the positive contribution that this option has on the SA objective will be enhanced.<br><br>The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.   |            |                |            |             |           |  |
| 12. To reduce the need to travel and enable the use of more sustainable modes of transport.                    |  |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
| Performance  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | ++   | ++         | ?              | +/-        | +           | +         |  |
| Commentary   | Development in urban areas should enable people to work locally, therefore reducing the need to travel to work and commute to Cardiff. This option would also support the findings of the Council's Employment land Study (October 2007) which identified Barry as having high a demand for local employment premises and land, and as such this option would enable the Council to rejuvenate existing employment sites and increase local employment opportunities.<br><br>Most sustainable settlements are also accessible by existing national public transport links, particularly via the Cardiff-Bridgend rail service. Increased development of homes and facilities within and adjoining existing rural settlements could also reduce travel distances. If St Athan and Llantwit Major are truly self-contained, this would also result in reduced travel distances, but they may also encourage more trips from surrounding areas. |            |                |            |             |           |  |
| Mitigation   | There is a need to ensure that the plan seeks the improvement to strategic links as well as those associated with localised development opportunities. There is however a risk that the level of funding for these schemes would not be provided through normal planning obligations and therefore alternative funding options such as through the Regional Transport Plan and/or the Wales Spatial Plan may need to be explored.  |            |                |            |             |           |  |

| 13. To provide for a diverse range of local job opportunities.  |  |            |                |            |             |           |  |
|---|--|------------|----------------|------------|-------------|-----------|--|
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | ++   | +          | 0              | +/-        | +           | +         |  |
| <b>Commentary</b>   | <p>Development is likely to provide employment opportunities in urban areas such as Barry and Penarth, where unemployment is an issue. This option would also support the findings of the Council's Employment land Study (October 2007) which identified Barry as having a high demand for local employment premises and land, and as such this option would allow the Council to rejuvenate existing employment sites and increase local employment opportunities.</p> <p>Whilst, it may be difficult to attract some large employers to smaller settlements due to inappropriately sized employment sites, there is the potential for providing small scale employment opportunities akin to the employment make up of the vale- i.e. small scale self employed businesses as identified in the employment study. Development in St Athan is expected to create many local jobs. Overall, although job opportunities are likely to increase, the range of jobs available may remain limited due to the dispersed nature of development.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>   | The option has the potential to meet local employment opportunities providing the plan includes intervention measures that will utilise existing employment sites. Similarly, policies for enhancing rural employment through rural diversification, conversion of rural buildings for business use and homeworking should also be considered.   |            |                |            |             |           |  |
| 14. To maintain and enhance the vitality and viability of the Vale of Glamorgan's town, district and local centres. |  |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | ++   | ++         | 0              | +          | +           | +         |  |
| <b>Commentary</b>   | This option offers a significant opportunity to enhance vitality and viability through new development in both urban and rural areas. There is an opportunity to make town centres attractive to local residents that currently use out-of-town retail developments (e.g. Culverhouse Cross). It is assumed that local community and leisure facilities will be provided together with new housing and employment. An increase in population, jobs and overall investment in a number of local centres should contribute positively to vitality and viability of the centres, particularly for rural settlements.  |            |                |            |             |           |  |
| <b>Mitigation</b>   | To support this objective, policies that promote new retail development that would not undermine the vitality and viability of existing retail centres will be required. Similarly the protection of small rural facilities such as shops and pubs will further support this objective.  |            |                |            |             |           |  |
| 15. To promote appropriate tourism.   |  |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +  | +          | 0              | +          | +           | +         |  |
| <b>Commentary</b>   | Increased development and infrastructure could contribute to a tourist infrastructure across the intervention areas and in particular support tourism led regeneration in Barry. Tourism development in these settlements will depend upon the businesses that start up as growth continues. By supporting a range of rural settlements, the strategy has the potential for enhancing the tourism on offer in the rural vale.  |            |                |            |             |           |  |
| <b>Mitigation</b>   | In support of this objective, the plan should include policies that promote appropriate tourism development within both urban and rural areas.   |            |                |            |             |           |  |

| Performance |   |

| ?           | The effect of the Option on the Sustainability Objective is unclear               |
| +<br>-      | Are the benefits/effects short, long or medium term? ( 5, 10 and 15 year periods) |

**Option 6 (Option 1 and Option 4):** Maximising the potential of and concentrating growth in Barry, Penarth, Dinas Powys, Sully and Rhoose (current UDP strategy) as well as developing a new rural settlement to promote sustainable self-containment.  
 (It is assumed that for a new settlement to be self contained it would consist of a minimum of 4,000 to 5,000 dwellings in order to provide for a range of services and facilities)

|                            |   |            |                |            |             |           |  |
|----------------------------|---|------------|----------------|------------|-------------|-----------|--|
| <b>LDP STRATEGY OPTION</b> | <p><b>Option 6 (Option 1 and Option 4): Maximising the potential of and concentrating growth in Barry, Penarth, Dinas Powys, Sully and Rhoose (current UDP strategy) as well as developing a new rural settlement to promote sustainable self-containment. (It is assumed that for a new settlement to be self contained it would consist of a minimum of 4,000 to 5,000 dwellings in order to provide for a range of services and facilities)</b></p>  |            |                |            |             |           |  |
| <b>SA OBJECTIVE</b>        | <p><b>1. To provide the opportunity for people to meet their housing needs.</b></p>   |            |                |            |             |           |  |
|                            | <p>What is the predicted effect of the option on each S.A Objective?</p>  |            |                |            |             |           |  |
|                            | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>         | +/-   | +/-        | 0              | +          | +/-         | -         |  |
| <b>Commentary</b>          | <p>It is envisaged that Barry and St. Athan will be key settlements with the remainder distributed appropriately in Penarth, Dinas Powys, Sully, Rhoose (the current UDP strategy) and the new rural settlement.</p> <p>The current UDP Strategy has brought about the delivery of housing in Penarth Haven and Rhoose Point. However, under this option the majority of housing would be provided within a new rural settlement, consisting of a minimum 5,000 dwellings, which whilst capable of addressing rural housing needs, would not be in the settlements where the greatest need arises. Elsewhere, and especially within the settlements of Barry and Penarth where the Council's Local Housing Market Assessment (2008) identifies the greatest need for affordable housing, development opportunities would be limited. A new settlement as part this option would not necessarily negate the need for further development in other settlements where new household formation and population growth would need to be addressed in the medium to long term.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>          | <p>To ensure that the SA objective is addressed, there will be a requirement within the LDP to ensure that an appropriate mix of housing is provided within new housing developments to meet the needs identified within the Local Housing Market Assessment. However, the potential for limited development opportunities during the plan period in the South Eastern settlements would require a high percentage of affordable housing to be secured on new allocated sites which may not be financially viable.</p>  |            |                |            |             |           |  |

| 2. To maintain, promote and enhance the range of local facilities. |  |   |                |            |             |           |  |
|--|--|---|----------------|------------|-------------|-----------|--|
|  |  | What is the predicted effect of the option on each S.A Objective? |                |            |             |           |  |
| Performance  | Urban SE   | Rural Vale  | Trans-boundary | Short term | Medium term | Long term |  |
|  | +/-  | +/-   | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>  | The delivery of housing in urban centres will ensure that development occurs where appropriate facilities are available. Barry and Penarth already have well established local facilities, with additional services being developed as part of the Barry and Penarth regeneration effort. However, the extent that regeneration would continue under this option is constrained by the low level of development opportunities in the south east. Therefore, outside of the new settlement, the option would provide mixed effects, with the greatest benefits being accrued by those settlements within close proximity to the new settlement. However, in the short to medium term residents of the new settlement will not enjoy the range of benefits available within existing settlements, which in turn could place added pressure on services and facilities available in nearby settlements. |   |                |            |             |           |  |
| <b>Mitigation</b>  | <p>The inclusion of policies to ensure that appropriate community facilities are provided as part of any new development, and that existing community facilities are safeguarded would assist in meeting this objective. However, as indicated above, the option could lead to redevelopment pressures on existing facilities as a consequence of under use / viability.</p> <p>Appropriate phasing mechanisms will need to be considered as part of the development of a new settlement to ensure facilities and services are provided in tandem with the occupation of new dwellings.</p>  |   |                |            |             |           |  |
| 3. To maintain and improve access for all.                         |  |   |                |            |             |           |  |
|  |  | What is the predicted effect of the option on each S.A Objective? |                |            |             |           |  |
| Performance  | Urban SE   | Rural Vale  | Trans-boundary | Short term | Medium term | Long term |  |
|  | +/-  | +/-   | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>  | Positive effects would be realised in the urban centres in the south east and Rhoose in terms of access to the built environment. Mixed effects would be realised in rural areas, with benefits for the new settlement, and to a lesser extent within other large settlements as a result of the limited levels of growth planned. However, existing rural access issues may not be addressed. The development of a new settlement also presents an opportunity for the creation of an accessible built environment.   |   |                |            |             |           |  |
| <b>Mitigation</b>  | Design policies within the LDP and Building regulations would provide the key mitigation tool for all development.   |   |                |            |             |           |  |
| 4. Reduce the causes of deprivation.                               |  |   |                |            |             |           |  |
|  |  | What is the predicted effect of the option on each S.A Objective? |                |            |             |           |  |
| Performance  | Urban SE   | Rural Vale  | Trans-boundary | Short term | Medium term | Long term |  |
|  | +/-  | +/-   | 0              | +/-        | +/-         | -         |  |
| <b>Commentary</b>  | With the majority of planned development occurring within the new settlement, any opportunities for addressing social and economic deprivation would be limited, especially within Barry where this is an issue. Multiple deprivation is not a key issue for the rural Vale, although isolation and access to services are areas of concern and may be addressed as a cascade effect from the new rural settlement. However this may be limited in extent.   |   |                |            |             |           |  |
| <b>Mitigation</b>  | It would be difficult to develop policies that could assist in addressing social and economic deprivation when the strategy option itself seeks to focus development primarily within the rural Vale, when deprivation is highest in the urban eastern vale.   |   |                |            |             |           |  |

| 5. To maintain, protect and enhance community spirit.               |   |            |                |            |             |           |  |
|---|---|------------|----------------|------------|-------------|-----------|--|
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|   | +/-   | 0          | 0              | +/-        | +/-         | +/-       |  |
| Commentary  | A new settlement has the potential to be well designed in order to reduce crime, provide facilities and encourage local distinctiveness and community ownership in the long term. However, this would only apply to the local area and have no benefits in other areas. Limited development opportunities in areas of deprivation could have a negative impact on community spirit as could demand for services and facilities in other settlements as well as in the early stages of development of the new settlement.  |            |                |            |             |           |  |
| Mitigation  | Policies for ensuring new development is integrated into existing communities as well as the provision of new community facilities ,improved employment opportunities and affordable housing will make a positive contribution within the settlements identified.   |            |                |            |             |           |  |
| 6. To minimise the causes and manage the effects of climate change. |   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|   | +/-   | +/-        | 0              | +/-        | +/-         | -         |  |
| Commentary  | <p>Provision of housing and employment in urban centres across the Vale of Glamorgan may reduce the need to travel and hence reduce greenhouse gas emissions from transport.</p> <p>The development of a new settlement without new employment opportunities would increase greenhouse gas emissions and energy use as it would also increase car use to and from the new settlement. A new settlement would nevertheless provide opportunities for applying the latest building codes to increase energy efficiency and decrease the impact from carbon emissions. However these benefits would be negligible if residents were reliant on travelling by car to access work and other essential services, and would only be accrued at the latter stages of the development when the majority of services and facilities would be provided.</p> <p>Depending on exact location and design of development, flood plains may or may not be affected. Development in coastal areas may be affected by future sea level rise particularly in the low lying estuarine areas around Ogmere-by-Sea, Aberthaw, Barry and Penarth. Furthermore, parts of Sully, Dinas Powys and Barry, are at risk of fluvial flooding.</p> |            |                |            |             |           |  |
| Mitigation  | <p>The location of any new development is a key determinant in the success of the plan in supporting measures that address climate change. Subsequently, to meet this objective the plan would need to ensure that the new settlement provides for adequate public transport facilities at the earliest stages, along with a suitable range of services and facilities for residents. In addition, opportunities for employment in close proximity to the new settlement will be essential through allocating employment land and promoting home working.</p> <p>The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.</p>   |            |                |            |             |           |  |

|   |  |            |                |            |             |           |  |
|---|--|------------|----------------|------------|-------------|-----------|--|
| <b>7. To minimise waste.</b>  |  |            |                |            |             |           |  |
| What is the predicted effect of the option on each S.A Objective?   |  |            |                |            |             |           |  |
| Performance   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|   | +/-  | +/-        | ?              | +/-        | +/-         | +/-       |  |
| Commentary  | The amount of waste proposed is the same for all options and therefore the increase in the levels of waste generated will be the same. However, the South East Wales Regional Waste Plan and the Landfill Directive limits the levels of waste going to landfill. Similarly, National Planning Guidance will require the plan to identify preferred locations for new regional waste management facilities. Whilst the options would therefore make a positive contribution to reducing waste arisings within the Vale of Glamorgan, a new settlement could place pressure on the delivery of recycling services.  |            |                |            |             |           |  |
| Mitigation  | Ensure that the plan includes a policy that requires the provision of recycling facilities within new developments.  |            |                |            |             |           |  |
| <b>8. To use land effectively and efficiently.</b>                  |  |            |                |            |             |           |  |
| What is the predicted effect of the option on each S.A Objective?   |  |            |                |            |             |           |  |
| Performance   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|   | +  | --         | 0              | +          | +/-         | -         |  |
| Commentary  | Major positive effects would be realised in the urban centres to the south east where more areas of previously developed land are available. Areas such as Barry have significant amounts of brownfield land that can be re-developed although this would be restricted as the result of a new settlement. However, there is the potential that development may occur on edge of town on greenfield land as the availability of brownfield sites reduces. Negative effects would be realised in rural areas, as a single new settlement is likely to use a significant tract of greenfield land, although preference can be given to the selection of sites that contain brown field land within the rural Vale.   |            |                |            |             |           |  |
| Mitigation  | The ability to mitigate against the negative impacts identified is limited by the strategic option, which will inevitably lead to the development of Greenfield sites.   |            |                |            |             |           |  |
| <b>9. To protect and enhance the built and natural environment.</b> |  |            |                |            |             |           |  |
| What is the predicted effect of the option on each S.A Objective?   |  |            |                |            |             |           |  |
| Performance   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|   | +  | +/-        | 0              | +          | +           | +         |  |
| Commentary  | Positive effects would be realised in the urban centres to the south east and Rhoose through enhancement and regeneration. Mixed effects would be realised in rural areas, as a new settlement would be damaging to the existing, higher value environment, while deflecting potentially damaging development from other rural areas. In urban settlements, it is increasingly becoming evident that some brownfield sites are significant habitats for important species. These habitats may be affected by development in urban areas. Furthermore, Rhoose, Barry and Sully are located in close proximity to the coastline, where growth and development may affect the coastal environment. There are SSSIs that may be affected along the Barry stretch of coastline. |            |                |            |             |           |  |
| Mitigation  | Policies that promote good design and respect both rural and urban settings will be required to ensure that development contributes positively to the built environment. The location of development particularly where this is in close proximity to nature designations will need to be considered at the candidate site assessment stage. Where this may have an impact on nature designations, ensure that appropriate mitigation measures are identified and imposed through planning conditions/obligations.<br><br>The candidate site assessment process will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.   |            |                |            |             |           |  |

| 10. To provide a high quality environment within all new developments.   |   |            |                |            |             |           |  |

| <b>Performance</b>   | +/-   | ++         | 0              | +          | +           | +         |  |
| <b>Commentary</b>  | Development of the new settlement may be well-designed from the outset in order to include high quality, sustainable materials, good use of open space, access etc. and can promote a positive community spirit. The development of the new settlement in this manner could set a precedent for development elsewhere in the Vale of Glamorgan. However, such development would be primarily windfall which could lead to detrimental impacts on the urban environment.   |            |                |            |             |           |  |
| <b>Mitigation</b>  | Policies that promote good design and respect both rural and urban settings will be required to ensure that development contributes positively to the built environment. The location of development particularly where this is in close proximity to nature designations will need to be considered at the candidate site assessment stage. Where this may have an impact on nature designations ensure that appropriate mitigation measures are identified and imposed through planning conditions/obligations.   |            |                |            |             |           |  |
| 11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage. |   |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
|  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>   | +   | +/-        | 0              | +          | +           | +         |  |
| <b>Commentary</b>  | <p>There are a large number of historic buildings, designations and protected monuments in the Vale of Glamorgan. In urban centres, there are a number of listed buildings, conservation areas and ancient monuments, which sensitive development could enhance and promote. Growth will provide the opportunities in urban areas to improve the quality of cultural and historic environments, particularly with regard to historic buildings. Although new development may offer the opportunity to enhance and promote the quality of the cultural/historic environment, there is the risk that development may be insensitive to these assets.</p> <p>In the rural Vale, where it is not expected that much growth will take place, it is assumed that the existing cultural and historic environment will be protected from the negative effects of development. The setting of any monuments will also be protected. The notable exception would be the new rural settlement which would be potentially damaging to the existing, high value historic and cultural environment.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>  | <p>The location of development particularly where this is in close proximity to nature designations will need to be considered at the candidate site assessment stage, where this may have an impact on nature designations ensure that appropriate mitigation measures are identified and imposed through planning conditions/obligations.</p> <p>The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.</p>   |            |                |            |             |           |  |

| 12. To reduce the need to travel and enable the use of more sustainable modes of transport. |  |            |                |            |             |           |
|---|--|------------|----------------|------------|-------------|-----------|
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |
| Performance   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |
|   | ++   | -          | 0              | +          | +/-         | -         |
| Commentary  | <p>Focusing growth in the urban south east will ensure that development is located in areas with easy access to services as well as to neighbouring areas. Most urban settlements in the south east are also accessible by existing national public transport links, particularly via the Cardiff-Bridgend rail service.</p> <p>Whilst the new settlement may be self contained in the short-term, it is likely that over time it will generate wider traffic congestion through in and out-commuting. Much depends upon the exact location with respect to existing and proposed public transport links. However, considering other new settlements in the UK, it is unlikely that this would address issues relating to the dependence on private cars in rural areas, nor is it likely to reduce the need to travel to existing major urban centres for higher value services.</p> <p>However, in the rural Vale isolation of settlements may continue to be an issue, as there would continue to be limited provision of facilities and employment in rural communities. Bus service provision is considered to be poor in Aberthaw (West), Cog, Penmark, Colwinston and Penllyn amongst other rural settlements (as detailed in the LDP Sustainability Appraisal Draft Scoping Report, February 2007). Development of a new rural settlement would not alleviate these problems. It is likely that the Vale will continue to be an attractive commuter zone due to its proximity to Cardiff and the M4.</p> |            |                |            |             |           |
| Mitigation  | The location of any new development is a key determinant in the success of the plan in supporting measures that address climate change. Subsequently, to meet this objective the plan would need to ensure that adequate public transport facilities are provided at the earliest stages of the new settlement, along with a suitable range of services and facilities for residents.  |            |                |            |             |           |
| 13. To provide for a diverse range of local job opportunities.                              |  |            |                |            |             |           |
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |
| Performance   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |
|   | +/-  | +/-        | +              | +/-        | +/-         | -         |
| Commentary  | <p>Development is likely to provide opportunities for employment in urban areas such as Barry and Penarth, where unemployment is an issue. However, the extent to which employment opportunities can be increased may be limited by levels of housing and other development planned. The majority of employment land is likely to be provided in Barry- although the majority of housing would be within a new settlement, and therefore this would not alleviate the employment issues in much of the rest of the Vale of Glamorgan (e.g. in Barry and Penarth).</p> <p>Although unemployment is not a key issue in rural settlements, most residents are employed outside their settlement and some outside the Vale of Glamorgan. There are limited local employment opportunities in rural settlements. Through this strategy, rural areas would continue to be affected by the lack of local employment opportunities.</p>  |            |                |            |             |           |
| Mitigation  | The location of any new development within the plan is a key determinant in the success of the plan in supporting this objective and on the basis of the above it would be difficult to mitigate against the negative impacts identified.  |            |                |            |             |           |

|  |  |            |                |            |             |           |  |
|--|--|------------|----------------|------------|-------------|-----------|--|
| <b>14. To maintain and enhance the vitality and viability of the Vale of Glamorgan's town, district and local centres.</b> |  |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
| <b>Performance</b>   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +  | +/-        | 0              | +          | +           | +/-       |  |
| <b>Commentary</b>  | <p>Positive effects would be realised in the urban centres in the south east and Rhose through regeneration and investment. However, the limited development planned within these centres would not provide sufficient opportunities to make urban centres attractive to local residents that currently use out-of-town retail developments (e.g. Culverhouse Cross). It is assumed that local community and leisure facilities will be provided together with new housing and employment.</p> <p>Mixed effects would be realised in rural areas, as a new settlement has the potential to be well-designed to ensure its own vitality. However, this largely depends upon the exact design of the development. It will not address vitality problems that exist in some of the other rural settlements.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>  | To support this objective, policies that promote new retail development that would not undermine the vitality and viability of existing retail centres will be required. Similarly the protection of small rural services such as shops and pubs will further support this objective.  |            |                |            |             |           |  |
| <b>15. To promote appropriate tourism.</b>   |  |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
| <b>Performance</b>   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | -  | +/-        | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>  | <p>The development of a new settlement is unlikely to significantly affect tourism in the Vale of Glamorgan as a whole, and could reduce opportunities for the development of tourism related regeneration in Barry. The potential impact on the vitality and viability of existing centres as identified against objective 14 could also harm the tourism potential in the Vale of Glamorgan.</p>   |            |                |            |             |           |  |
| <b>Mitigation</b>  | In support of this objective, the plan should include policies that promote appropriate tourism development within both urban and rural areas.   |            |                |            |             |           |  |

| +<br>-      | Are the benefits/effects short, long or medium term? ( 5, 10 and 15 year periods) |

**Option 7 (Option 2b and Option 5): Concentrate development opportunities in Barry and the South East Zone. The St.Athan area to be a key development opportunity. Other sustainable settlements to accommodate further housing and associated development based on a sustainability test.**

|                            |   |            |                |            |             |           |  |
|----------------------------|---|------------|----------------|------------|-------------|-----------|--|
| <b>LDP STRATEGY OPTION</b> | <b>Option 7 (Option 2b and Option 5): Concentrate development opportunities in Barry and the South East Zone. The St.Athan area to be a key development opportunity. Other sustainable settlements to accommodate further housing and associated development based on a sustainability test.</b>  |            |                |            |             |           |  |
| <b>SA OBJECTIVE</b>        | <b>1. To provide the opportunity for people to meet their housing needs.</b>  |            |                |            |             |           |  |
|                            | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
|                            | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>         | ++  | +/-        | 0              | +          | +           | +         |  |
| <b>Commentary</b>          | <p>It is assumed that development would provide for housing needs in centres across the whole Vale, in both existing urban and rural areas. With this approach, housing allocations within the rural vale could be spread too thinly to meet local housing need particularly amongst the smaller settlements as a consequence of allocating development on a pro rata basis as proposed under option 2b.</p> <p>The Council's Local Housing Market Assessment (2008) has revealed that the greatest need exists within Barry and Penarth and the Coastal Area, followed by the Rural Vale. This option would therefore ensure that an appropriate level of housing would be provided in the largest settlements where demand for new housing is likely to be greatest as a result of future population growth and new household formation.</p> <p>The sustainability test would ensure that housing is delivered in those settlements with the capacity to accommodate new development, particularly in rural parts of the Vale of Glamorgan.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>          | To ensure that the SA objective is addressed, there will be a requirement within the LDP to ensure that an appropriate mix of housing is provided within the settlements identified to meet the needs identified within the Local Housing Market Assessment and to address the effects of future population growth. Site thresholds and targets would also ensure that future housing developments reflect the levels of housing need.  |            |                |            |             |           |  |
|                            | <b>2. To maintain, promote and enhance the range of local facilities.</b>   |            |                |            |             |           |  |
|                            | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
|                            | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>         | +   | +/-        | 0              | +          | +           | +         |  |
| <b>Commentary</b>          | In both rural and urban settlements the option provides opportunities for a range of new services to be included as part of any future development. Also the identification of sustainable settlements will ensure that there are existing adequate local facilities to support the earliest stages of development where the provision of new facilities is generally not viable. This option will also promote and enhance community facilities in both rural and urban areas ensuring that existing facilities remain viable. It will be essential to ensure that there is enough capacity to cope with significant new populations. However, in smaller rural settlements the level of development would not lead to a significant level of improvement in the provision of services and facilities due to the allocation of development on a pro rata basis as proposed under option 2b.  |            |                |            |             |           |  |
| <b>Mitigation</b>          | Whilst the option would assist in supporting existing facilities, there will still be a need for policies that safeguard existing facilities, especially in the smaller settlements where development would not occur, and also for policies that seek appropriate new facilities to meet the needs of both existing residents and those associated with the planned housing.   |            |                |            |             |           |  |

|   |   |            |                |            |             |           |  |
|---|---|------------|----------------|------------|-------------|-----------|--|
| <b>3. To maintain and improve access for all.</b> |   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |

|   | +   | +          | 0              | +          | +           | +         |  |
| <b>Commentary</b>                                 | <p>Planning policy and building regulations would set minimum design standards to ensure that buildings are designed to be accessible to all. Growth in settlements across the Vale of Glamorgan in both urban and rural areas will ensure that a greater proportion of the population will have improved access to facilities and specific buildings. Increased development presents an opportunity to ensure that developments are located in accessible locations.</p>   |            |                |            |             |           |  |
| <b>Mitigation</b>                                 | Design policies within the LDP and Building Regulations would provide the key mitigation tool for all development and would further reinforce the positive outcome that the strategy option offers.   |            |                |            |             |           |  |
| <b>4. Reduce the causes of deprivation.</b>       |   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| <b>Performance</b>                                | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|   | ++  | +          | 0              | 0          | +           | +         |  |
| <b>Commentary</b>                                 | <p>Multiple deprivation is mainly within the urban south east part of the Vale of Glamorgan (e.g. Barry). A balanced spread of growth should increase the number of homes and business development, helping to tackle the causes of deprivation. Large growth centres would contribute significantly to employment and residential growth in rural parts of the Vale. However, this would not necessarily reduce deprivation associated with limited access to facilities experienced in more remote areas.</p> <p>The identification of Barry as a key settlement in the settlement hierarchy accords with the findings of the Council's Employment Land Study (October 2008) which identifies Barry as an area where demand for employment premises and sites are greatest. Therefore, the strategy would allow the plan to support future employment growth opportunities within Barry which may assist in addressing economic deprivation.</p> <p>In addition, Barry is included in the Wales Spatial Plan as a key settlement. It's recognition as a strategic location will further the Council's ability to secure funding for regeneration initiatives that can also assist in addressing deprivation in the town. It should be noted that St Athan also features within the Wales Spatial Plan as a Strategic Opportunity Area, and therefore this option allows for economic development growth opportunities to be capitalised, which will further contribute towards meeting this SA objective.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>                                 | The option has the potential to meet local employment needs providing the plan includes intervention measures that will utilise existing employment land opportunities. Similarly, policies for enhancing rural employment through rural diversification, conversion of rural buildings for business use and home working should also be considered.  |            |                |            |             |           |  |

|  |  |            |                |            |             |           |  |
|--|--|------------|----------------|------------|-------------|-----------|--|
| <b>5. To maintain, protect and enhance community spirit.</b>               |  |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
| <b>Performance</b>   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +  | +          | 0              | +          | +           | +         |  |
| <b>Commentary</b>  | The effect of growth on community spirit is likely to be positive. Growth in these areas may contribute to community spirit through an increase in the development of facilities and good design.  |            |                |            |             |           |  |
| <b>Mitigation</b>  | To ensure that new development has a positive impact of the lives of existing and future residents, new development should be integrated into existing settlement patterns, including the provision of new community facilities. In addition, new employment opportunities and affordable housing will make a positive contribution to community spirit.   |            |                |            |             |           |  |
| <b>6. To minimise the causes and manage the effects of climate change.</b> |  |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
| <b>Performance</b>   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +  | +/-        | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>  | A diverse spread of development has the potential to reduce travel distances and hence vehicular greenhouse gas emissions. The option also promotes more development in the urban areas already served by public transport. Development in the smaller settlements will be determined through a sustainability test thereby ensuring that growth occurs where there are sufficient facilities to sustain it. Nonetheless, other issues such as increased energy use as a result of increased development, destruction of green sincs, building on floodplains etc. could negatively affect this objective. A large area of floodplain exists to the south east of Barry.   |            |                |            |             |           |  |
| <b>Mitigation</b>  | <p>The implementation of stringent energy efficient standards for new buildings will help to mitigate against the contribution that new development and increased energy consumption has on climatic factors. However, the plan should consider setting higher energy efficiency standards than the minimum required through the Code for Sustainable Homes.</p> <p>The Candidate site assessment will assist in ensuring that development is situated away from sensitive areas. However, National Planning Guidance will determine the location of development within areas that are known to be at risk of flooding.</p> <p>In terms of coastal flooding, the effect of climate change on coastal settlements is unclear at this stage. However the locational policies of this option would ensure that development would not take place in undeveloped coastal areas.</p> |            |                |            |             |           |  |

|  |  |            |                |            |             |           |
|--|--|------------|----------------|------------|-------------|-----------|
| <b>7. To minimise waste.</b>                       |  |            |                |            |             |           |
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |
| <b>Performance</b>                                 | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |
|  | +/-  | +/-        | 0              | +/-        | +           | +         |
| <b>Commentary</b>                                  | The amount of development is the same for all options and therefore the increase in the levels of waste generated will be the same. However, the South East Wales Regional Waste Plan and the Landfill Directive limits the levels of waste going to landfill. Similarly, National Planning Guidance will require the plan to identify preferred locations for new regional waste management facilities. Consequently, this option would inherently make a positive contribution to reducing waste arisings within the Vale of Glamorgan. In addition, development could result in the reuse of disused buildings, reducing waste construction material in both urban and rural areas  |            |                |            |             |           |
| <b>Mitigation</b>                                  | Ensure that the plan includes a policy that requires the provision of recycling facilities within new developments and promote the sensitive reuse of existing buildings   |            |                |            |             |           |
| <b>8. To use land effectively and efficiently.</b> |  |            |                |            |             |           |
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |
| <b>Performance</b>                                 | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |
|  | ++   | +/-        | 0              | +          | +           | +/-       |
| <b>Commentary</b>                                  | <p>There is the opportunity to redevelop brownfield sites in urban areas. In Barry, this option provides the opportunity to redevelop under utilised employment sites, as indicated in the Council's Employment Land Study (October 2008).</p> <p>Where appropriate, development in rural settlements would need to be focused within existing built up areas to ensure that the countryside is protected from inappropriate development. However, this will depend upon the availability of land for development within existing built up areas and the impact that new development would have on the character of existing settlements. The option also presents the opportunity to encourage good quality high-density developments in both urban and rural areas.</p>  |            |                |            |             |           |
| <b>Mitigation</b>                                  | <p>Include policies to encourage the reuse of Brownfield sites over Greenfield sites. However this may be limited in the rural Vale due to the availability of Brownfield sites and could reduce significantly over the plan period. However, the identification of sustainable settlements could in the long-term offset the loss of Greenfield sites as development in sustainable locations could provide a positive contribution towards climate change. The encouragement of high density development may not be suited to all settlements. E.g. there could be a conflict with the character of traditional villages where building densities are lower. Therefore the plan should also impose stringent design standards.</p> <p>The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.</p> |            |                |            |             |           |

|   |  |            |                |            |             |           |
|---|--|------------|----------------|------------|-------------|-----------|
| <b>9. To protect and enhance the built and natural environment.</b>           |  |            |                |            |             |           |
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |
| <b>Performance</b>  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |
|   | +  | +/-        | 0              | +/-        | +           | +         |
| <b>Commentary</b>   | The option would focus development in existing settlements and therefore encourage brownfield development rather than use of greenfield sites. Development may result in the regeneration of existing urban areas such as in Barry where new development may act as a catalyst for general environmental improvements. The environment surrounding rural settlements could be adversely affected as development may affect biodiversity, landscape, soil function, water resource use and heritage. A number of rural settlements are located in special landscape areas, the character of which may be negatively affected by development.  |            |                |            |             |           |
| <b>Mitigation</b>   | <p>Include policies to encourage the reuse of Brownfield sites over Greenfield. However this may be limited due to the availability of Brownfield sites in the rural Vale and could reduce significantly over the plan period. The encouragement of high density development may not be suited to all settlements, e.g. there could be a conflict in some of the traditional rural villages where building densities are generally lower. In such cases the plan should also impose stringent design standards.</p> <p>Policies that promote good design and respect rural and urban settings will be required to ensure that development contributes positively to the built environment. However, the loss of green field sites adjoining existing settlements could harm the setting and character of some of the rural settlements or special landscape areas. Accordingly, the location of development particularly where this is in close proximity to nature designations will need to be considered at the candidate site assessment stage. Where this may have an impact on landscape and nature designations appropriate mitigation measures should be identified and imposed through planning conditions/obligations.</p> |            |                |            |             |           |
| <b>10. To provide a high quality environment within all new developments.</b> |  |            |                |            |             |           |
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |
| <b>Performance</b>  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |
|   | +  | +          | 0              | +/-        | +           | +         |
| <b>Commentary</b>   | New developments have the opportunity to be well-designed from the outset in order to include high quality, sustainable materials, make efficient use of open space, access etc and will promote a positive community spirit.  |            |                |            |             |           |
| <b>Mitigation</b>   | Policies that promote good design and respect rural and urban settings will be required to ensure that development contributes positively to the built environment. However, the loss of green field sites adjoining existing settlements could harm the setting and character of some of the rural settlements or special landscape areas. Accordingly, the location of development (particularly where this is in close proximity to nature designations) will need to be considered at the candidate site assessment stage. Where this may have an impact on landscape and nature designations ensure that appropriate mitigation measures are identified and imposed through planning conditions/obligations.  |            |                |            |             |           |

| 11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage. |   |            |                |            |             |           |   |
|--|---|------------|----------------|------------|-------------|-----------|---|
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |   |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |   |
|  |   | +/-        | +/-            | 0          | +/-         | +/-       | + |
| Commentary   | <p>There are a large number of historic buildings, designations and protected monuments in the Vale of Glamorgan. Growth will provide opportunities in urban and rural areas to improve the quality of the cultural and historic environment, particularly with regard to historic buildings. Although new development may offer the opportunity to enhance and promote the quality of the cultural/historic environment, there is the risk that development may be insensitive to these assets.</p>  |            |                |            |             |           |   |
| Mitigation   | <p>Policies that promote good design and respect rural and urban settings will be required to ensure that development contributes positively to the built environment. Similarly, policies for the protection of conservation areas and historic environments will ensure that the positive contribution that this option has on the SA objective will be enhanced.</p> <p>The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.</p>   |            |                |            |             |           |   |
| 12. To reduce the need to travel and enable the use of more sustainable modes of transport.                    |   |            |                |            |             |           |   |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |   |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |   |
|  | +   | +/-        | 0              | +/-        | +/-         | +/-       |   |
| Commentary   | <p>Development in urban areas should enable people to work locally, therefore reducing the need to travel to work and commute to Cardiff. Most urban settlements are also accessible by existing national public transport links, particularly via the Cardiff-Bridgend rail service.</p> <p>Increased development of homes and facilities around existing sustainable rural settlements could also improve access to sustainable transport modes as a cascade effect. Through the sustainability test, residents of rural communities that lack appropriate facilities may have to continue travelling long distances to use facilities in other settlements. It is likely that the Vale will continue to be an attractive commuter zone due to its proximity to Cardiff and the M4.</p> |            |                |            |             |           |   |
| Mitigation   | <p>There is a need to ensure that the plan seeks the improvement of strategic links as well as those associated with localised development opportunities. There is however a risk that the level of funding for these schemes would not be provided through normal planning obligations and therefore alternative funding options such as the Regional Transport Plan and/or the Wales Spatial Plan will need to be explored.</p>   |            |                |            |             |           |   |

|  |   |            |                |            |             |           |  |
|--|---|------------|----------------|------------|-------------|-----------|--|
| <b>13. To provide for a diverse range of local job opportunities.</b>  |   |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
|  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>   | +   | +          | 0              | +          | +           | +         |  |
| <b>Commentary</b>  | This option would provide opportunities for employment in urban areas such as Barry and Penarth, where unemployment is an issue and where a large concentration of employment land is available (Vale of Glamorgan Employment Land Study) and is easily accessible by public transport. Whilst it may be difficult to attract some large employers to smaller settlements, the option does provide the opportunity to support small scale local employment opportunities akin to the character of the rural Vale and complimentary to the make up of local employment identified in the Council's employment study. Development in St Athan is expected to create many local jobs. Overall, although job opportunities are likely to increase, the range of jobs available may remain limited due to the dispersed nature of development. |            |                |            |             |           |  |
| <b>Mitigation</b>  | Consider the inclusion of policies that utilise underused employment land opportunities e.g. mixed use development. Similarly, policies for enhancing rural employment through rural diversification, conversion of rural buildings for business use and home working should also be considered. The consideration of appropriate new small scale rural employment sites promoted through the candidate site process could also assist in supporting this objective through the LDP.  |            |                |            |             |           |  |
| <b>14. To maintain and enhance the vitality and viability of the Vale of Glamorgan's town, district and local centres.</b> |   |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| <b>Performance</b>   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | ++  | ++         | 0              | +          | +           | +         |  |
| <b>Commentary</b>  | This option offers a significant opportunity to enhance vitality and viability through new development in both urban and rural areas. There is an opportunity to make town centres attractive to local residents that currently use out-of-town retail developments (e.g. Culverhouse Cross). It is assumed that local community and leisure facilities will be provided together with new housing and employment.<br><br>An increase in population, jobs and overall investment in a number of local centres should contribute positively to vitality and viability of the centres, particularly for rural settlements.  |            |                |            |             |           |  |
| <b>Mitigation</b>  | To support this objective, policies that promote new retail development that would not undermine the vitality and viability of existing retail centres will be required. Similarly the protection of small rural services such as shops and pubs will further support this objective.   |            |                |            |             |           |  |
| <b>15. To promote appropriate tourism.</b>   |   |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| <b>Performance</b>   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +   | +          | 0              | +/-        | +           | +         |  |
| <b>Commentary</b>  | Increased development and infrastructure could contribute to tourist infrastructure across the intervention areas and in particular support tourism led regeneration in Barry. Tourism development in these settlements will depend upon the businesses that start up as growth continues. By supporting a range of rural settlements, the strategy has the potential for enhancing the tourism offer of the rural vale.  |            |                |            |             |           |  |
| <b>Mitigation</b>  | In support of this objective, the plan should include policies that promote appropriate tourism development within both urban and rural areas.  |            |                |            |             |           |  |

| Performance |   |
|-------------|---|

| +<br>-      | Are the benefits/effects short, long or medium term? ( 5, 10 and 15 year periods) |

**Option 8 (Option 5 and Option 4):** Concentrate development opportunities in Barry and the South East Zone. The St.Athan area to be a key development opportunity. Other sustainable settlements (including a new rural settlement) to accommodate further housing and associated development. (It is assumed that for a new settlement to be self contained it would consist of a minimum 5,000 dwellings in order to provide for a range of services and facilities)

|                            |  |            |                |            |             |           |  |
|----------------------------|--|------------|----------------|------------|-------------|-----------|--|
| <b>LDP STRATEGY OPTION</b> | <p>Option 8 (Option 5 and Option 4): Concentrate development opportunities in Barry and the South East Zone. The St.Athan area to be a key development opportunity. Other sustainable settlements (including a new rural settlement) to accommodate further housing and associated development.</p> <p>(It is assumed that for a new settlement to be self contained it would consist of a minimum 5,000 dwellings in order to provide for a range of services and facilities)</p>   |            |                |            |             |           |  |
| <b>SA OBJECTIVE</b>        | <p>1. To provide the opportunity for people to meet their housing needs.</p>   |            |                |            |             |           |  |
|                            | <p>What is the predicted effect of the option on each S.A Objective?</p>   |            |                |            |             |           |  |
| <b>Performance</b>         | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|                            | +  | +/-        | 0              | +/-        | +/-         | -         |  |
| <b>Commentary</b>          | <p>Development will be focused within the largest settlements of the South East Zone, e.g. Barry, Penarth, Dinas Powys (the current UDP strategy) and the new settlement.</p> <p>The current UDP Strategy has brought about the delivery of housing in urban areas such as Penarth Haven and Rhoose Point. However, under this option the majority of housing would be provided within a new settlement, consisting of a minimum 5,000 dwellings, which whilst capable of addressing rural housing needs may not be in the settlements where need arises. Elsewhere, and especially within the settlements of Barry and Penarth where the Council's Local Housing Market Assessment (2008) identifies the greatest need for affordable housing, development opportunities would be limited. A new settlement as part this option would not necessarily negate the need for further development in other settlements where new household formation and population growth would need to be addressed in the medium to long term.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>          | <p>To ensure that the SA objective is addressed, there will be a requirement within the LDP to ensure that an appropriate mix of housing is provided within new housing developments to meet the needs identified within the Local Housing Market Assessment. However, the potential for limited development opportunities during the plan period in the South Eastern settlements would require securing a high percentage of affordable housing on allocated sites which may not be financially viable.</p> <p>To overcome this issue, a reduction in the size of the new rural settlement could be considered- however this could result in creating additional secondary impacts, e.g. residents of the new settlement may have to travel further distances as a consequence of fewer services and facilities being provided.</p>  |            |                |            |             |           |  |

| 2. To maintain, promote and enhance the range of local facilities. |  |            |                |            |             |           |
|--|--|------------|----------------|------------|-------------|-----------|
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |
| Performance  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |
|  | +  | +/-        | 0              | +/-        | +/-         | +/-       |
| Commentary   | <p>Positive benefits in terms of facilities provision would be realised in both urban and rural settlements where development would occur. However, regeneration would inevitably be constrained by the low level of development opportunities in these areas. Therefore, outside of the new settlement, the option would provide mixed effects, with the greatest benefits being accrued by those settlements within close proximity to the new settlement, and to a lesser extent in some larger settlements considered to be sustainable (through a sustainability test). The majority of small rural settlements would not benefit from this option since development opportunities that could secure improvements would be directed elsewhere. This could undermine the viability of the services within these smaller settlements and lead to pressures for redevelopment.</p> <p>It should be noted that in the short to medium term residents of the new settlement will not enjoy the range of benefits available within existing settlements. Therefore the residents could place added pressure on services and facilities available in nearby settlements.</p> |            |                |            |             |           |
| Mitigation   | <p>The inclusion of policies ensuring that appropriate community facilities are provided as part of any new development, and that existing community facilities are safeguarded would assist in meeting this objective. However, as indicated above, the option could lead to redevelopment pressures on existing facilities as a consequence of under use/viability.</p> <p>Appropriate phasing mechanisms will need to be considered as part of the development of a new settlement to ensure facilities and services are provided in tandem with the occupation of new dwellings.</p>   |            |                |            |             |           |
| 3. To maintain and improve access for all.                         |  |            |                |            |             |           |
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |
| Performance  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |
|  | +/-  | +/-        | 0              | +/-        | +/-         | +/-       |
| Commentary   | <p>Positive effects would be realised in the urban centres within the south east zone and St Athan in terms of access to the built environment. Mixed effects would be realised in rural areas, with benefits for the new settlement, and to a lesser extent within other large settlements as a result of the limited levels of growth planned. However, existing rural access issues may not be addressed. The development of a new settlement also presents an opportunity for the creation of an accessible built environment.</p>   |            |                |            |             |           |
| Mitigation   | Design policies within the LDP and Building regulations would provide the key mitigation tool for all development.   |            |                |            |             |           |

| 4. Reduce the causes of deprivation.                  |   |            |                |            |             |           |     |
|---|---|------------|----------------|------------|-------------|-----------|-----|
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |     |
| Performance   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |     |
|   |   | +/-        | +/-            | 0          | +/_         | +/-       | +/- |
| Commentary  | With the majority of planned development occurring within a new settlement, any opportunities for addressing social and economic deprivation within the South East zone would be limited, especially within Barry where this is an issue. Multiple deprivation is not a key issue for the rural Vale, although isolation and access to services are areas of concern. The latter may improve as a cascade effect from the new rural settlement and limited development within sustainable settlements, although this may be limited in extent. Similarly, the concentration of development in a few settlements would not significantly improve access where this is a problem. |            |                |            |             |           |     |
| Mitigation  | It would be difficult to develop policies that could fully assist in addressing social and economic deprivation within the South East Zone when the strategy option itself seeks to focus development primarily within a new rural settlement, where access to facilities and services is the only limiting factor in terms of social deprivation.  |            |                |            |             |           |     |
| 5. To maintain, protect and enhance community spirit. |   |            |                |            |             |           |     |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |     |
| Performance   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |     |
|   | +/-   | +/-        | 0              | +/-        | +/-         | +/-       |     |
| Commentary  | A new settlement has the potential to be well designed in order to reduce crime, provide facilities and encourage local distinctiveness and community ownership in the long term. This would to be true albeit to a lesser extent for the sustainable settlements and settlements within the South East Zone. Limited development opportunities in areas of deprivation could have a negative impact on community spirit as could demand for services in other settlements in the early stages of the new settlement.   |            |                |            |             |           |     |
| Mitigation  | Policies for ensuring new development is integrated into existing communities as well as the provision of new community facilities ,improved employment opportunities and affordable housing will make a positive contribution within the settlements identified.   |            |                |            |             |           |     |

| 6. To minimise the causes and manage the effects of climate change. |   |            |                |            |             |           |  |
|---|---|------------|----------------|------------|-------------|-----------|--|
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
|   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +   | +/-        | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>   | <p>Provision of housing and employment in a select number of sustainable settlements across the Vale of Glamorgan could assist in reducing the need to travel to access local services and therefore assist in reducing greenhouse gas emissions from transport. However, more sustainable transport options and improvements to local services would not be realised for the majority of settlements due to a lack of development opportunities.</p> <p>The option could also contribute to a reduction in commuting as there would be more opportunities for improving public transport and the increased spread of homes, jobs and services would lead to fewer/shorter trips being made and hence fewer vehicular greenhouse gas emissions. However, more development overall and particularly a new rural settlement will lead to increased energy use, increased flooding potential, destruction of green spaces, more rapid run-off rates etc.</p> <p>The development of a new settlement without new employment opportunities would increase greenhouse gas emissions and energy use as it would also increase car use to and from the new settlement. A new settlement would nevertheless provide opportunities for applying the latest building codes to increase energy efficiency and decrease carbon emissions. However these benefits would be negligible if residents were reliant on travelling to access work and other essential services, and would only be accrued at the latter stages of the development when the majority of services and facilities would be provided.</p> <p>Depending on the exact location and design of development, flood plains may or may not be affected. Development in coastal areas may be affected by future sea level rise particularly in the low lying estuarine areas around Ogmore-by-Sea, Aberthaw, Barry and Penarth. Furthermore, parts of Sully, Dinas Powys and Barry, are at risk of fluvial flooding.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>   | The location of any new development is a key determinant in the success of the plan in supporting measures that address climate change. Subsequently, to meet this objective the plan would need to ensure that the new settlement provides for adequate public transport facilities at the earliest stages, along with a suitable range of services and facilities for residents. In addition, opportunities for employment in close proximity to the new settlement will be essential through allocating employment land and promoting home working.  |            |                |            |             |           |  |
| 7. To minimise waste.   |   |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
|   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +/-   | +/-        | 0              | +/-        | +/-         | +         |  |
| <b>Commentary</b>   | The amount of development is the same for all options and therefore the increase in the levels of waste generated will be the same. However, the South East Wales Regional Waste Plan and the Landfill Directive limits the levels of waste going to landfill. Similarly, National Planning Guidance will require the plan to identify preferred locations for new regional waste management facilities. Whilst the options would therefore make a positive contribution to reducing waste arisings within the Vale of Glamorgan, a new settlement could place pressure on the delivery of recycling services.  |            |                |            |             |           |  |
| <b>Mitigation</b>   | Ensure that the plan includes a policy that requires the provision of recycling facilities within new developments.   |            |                |            |             |           |  |

| 8. To use land effectively and efficiently.                  |   |            |                |            |             |           |  |
|--|---|------------|----------------|------------|-------------|-----------|--|
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | ++  | -          | 0              | +          | +/-         | -         |  |
| Commentary   | <p>Development within the South East Zone would provide an opportunity for the reuse of previously developed land. In the rural settlements development on greenfield land may occur depending upon the availability of land for development within existing built up areas.</p> <p>It is anticipated that the majority of development (both housing and employment) at St Athan and Barry will use previously developed land.</p> <p>A new rural settlement is likely to be on largely greenfield land and would have an adverse effect on the landscape. Although preference could be given to the selection of brownfield sites within the rural Vale, this may be difficult to achieve since there are few brownfield opportunities outside of the South East Zone that would be capable of accommodating a new settlement.</p> |            |                |            |             |           |  |
| Mitigation   | <p>Within the South East Zone policies should favour Brownfield sites over Greenfield sites. The ability to mitigate against the negative impacts within the rural Vale, especially the identification of Brownfield land suitable for accommodating a new rural settlement is limited by the strategic option, which will inevitably lead to the development of Greenfield sites.</p> <p>The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.</p>  |            |                |            |             |           |  |
| 9. To protect and enhance the built and natural environment. |   |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +   | -          | 0              | +/-        | +/-         | +/-       |  |
| Commentary   | <p>Positive benefits would be realised in the urban centres to the south east through enhancement and regeneration. In rural areas, this could be negative as there is the potential for the existing environment to be adversely affected. Negative effects would be realised in more sensitive rural areas, and more so due to the potentially adverse impacts of the new rural settlement. However this could be reduced through the preferential selection of brown field sites within the rural Vale for the location of this settlement.</p>  |            |                |            |             |           |  |
| Mitigation   | <p>Policies that promote good design and respect both rural and urban settings will be required to ensure that development contributes positively to the built environment. The location of development particularly where this is in close proximity to nature designations will need to be considered at the candidate site assessment stage. Where this may have an impact on nature designations, ensure that appropriate mitigation measures are identified and imposed through planning conditions/obligations.</p>   |            |                |            |             |           |  |

|   |  |            |                |            |             |           |  |
|---|--|------------|----------------|------------|-------------|-----------|--|
| <b>10. To provide a high quality environment within all new developments.</b>   |  |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +  | +          | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>   | All new developments within this option has the opportunity to be well-designed from the outset in order to include high quality, sustainable materials, make efficient use of open space, access etc and can promote a positive community spirit.   |            |                |            |             |           |  |
| <b>Mitigation</b>   | <p>Development of the new settlement may be well-designed from the outset in order to include high quality, sustainable materials, use of open space, access etc. and can promote a positive community spirit. The development of the new settlement in this manner could set a precedent for development elsewhere in the Vale of Glamorgan. However, such development would primarily be windfall which could lead to other detrimental impacts due to the unplanned nature of the development.</p> <p>The candidate site assessment will also assist in the identification of sensitive locations and therefore provides for an element of mitigation.</p>  |            |                |            |             |           |  |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage.</b> |  |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +  | +/-        | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>   | <p>There are a large number of historic buildings, designations and protected monuments in the Vale of Glamorgan. In urban centres, there are a number of listed buildings, conservation areas and ancient monuments, which sensitive development could enhance and promote.</p> <p>Growth will provide opportunities in urban areas to improve the quality of cultural and historic environments, particularly with regard to historic buildings. Although new development may offer the opportunity to enhance and promote the quality of the cultural/historic environment, there is a risk that development may be insensitive to these assets.</p> <p>There are heritage features of value in rural areas that may be affected by new development particularly as a result of windfall development. Development of the new settlement is likely to adversely affect the landscape and heritage value in its immediate area.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>   | The location of development particularly where this is in close proximity to nature designations will need to be considered at the candidate site assessment stage. Where this may have an impact on nature designations ensure that appropriate mitigation measures are identified and imposed through planning conditions/obligations.   |            |                |            |             |           |  |

|  |   |            |                |            |             |           |  |
|--|---|------------|----------------|------------|-------------|-----------|--|
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport.</b> |   |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| <b>Performance</b>   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +   | +/-        | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>  | <p>Focusing development in urban areas and other sustainable settlements where there is already a significant population and relatively good access to public transport should have a positive effect on local sustainable transport use. Increased development of homes and facilitates in and adjacent to existing sustainable towns and villages could also improve access to sustainable transport modes as a cascade effect.</p> <p>Whilst the new rural settlement may be self contained in the short-term, it is likely that over time it will generate wider traffic congestion through in and out-commuting. However, the extent of this depends upon the exact location with respect to existing and proposed public transport links. However, based on previous experiences of other new settlements in the UK, it is unlikely that this would address issues relating to the dependence on private cars in rural areas, or reduce the need to travel to existing major urban centres for higher value services.</p> <p>However, in the rural Vale isolation of settlements may continue to be an issue, as there would continue to be limited provision of facilities and employment opportunities in rural communities. Bus service provision is considered to be poor in Aberthaw (West), Cog, Penmark, Colwinston and Penllyn amongst other rural settlements (as detailed in the LDP Sustainability Appraisal Draft Scoping Report, February 2007). Development of a new rural settlement would not alleviate these problems and it is likely that the Vale will continue to be an attractive commuter zone due to its proximity to Cardiff and the M4.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>  | The location of any new development is a key determinant in the success of the plan in supporting measures that address climate change. Subsequently, to meet this objective the plan would need to ensure that adequate public transport facilities are provided at the earliest stages of a development, along with a suitable range of services and facilities for residents.  |            |                |            |             |           |  |
| <b>13. To provide for a diverse range of local job opportunities.</b>                              |   |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| <b>Performance</b>   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +   | +/-        | 0              | +          | +           | +         |  |
| <b>Commentary</b>  | <p>Development within the South East Zone is likely to provide job opportunities in urban areas such as Barry and Penarth, where unemployment is an issue and where there is an adequate supply of employment land. However, the majority of employment land is likely to be provided in Barry, which would assist in addressing the economic deprivation that exists in some wards.</p> <p>However, it may be difficult to attract some large employers to the smaller settlements in the rural vale due to the limited range and choice of employment sites that exist, consequently restricting the range of job opportunities. However, small scale employment opportunities within the more sustainable rural settlements could increase employment opportunities in some parts of the rural vale. Development in St Athan is expected to create many local jobs. Overall, although this option may increase job opportunities, the range of jobs available may remain limited due to the dispersed nature of development. If the new rural settlement is sustainable and self-contained, there would be a need to provide local employment opportunities within and adjoining the development.</p>  |            |                |            |             |           |  |
| <b>Mitigation</b>  | The location of any new development is a key determinant in the success of the plan in supporting this objective and on the basis of the above the opportunity to maximise employment opportunities within strategic areas such as Barry may be limited due to the concentration of development elsewhere.  |            |                |            |             |           |  |

| 14. To maintain and enhance the vitality and viability of the Vale of Glamorgan's town, district and local centres. |   |            |                |            |             |           |
|---|---|------------|----------------|------------|-------------|-----------|
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |
| Performance   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |
|   | ++  | +          | 0              | +          | +           | +         |
| Commentary  | <p>This option offers a significant opportunity to enhance vitality and viability through new development in both urban and rural areas.</p> <p>There is an opportunity to make town centres attractive to local residents that currently use out-of-town retail developments (e.g. Culverhouse Cross). An increase in population, jobs and overall investment in a number of local centres should contribute positively to vitality and viability of the centres, particularly for rural settlements. The new rural settlement has the potential to be well-designed to ensure its own vitality and viability. However, this largely depends upon the exact design of the development. However, it will not address vitality and viability problems that exist in some of the other rural settlements.</p> |            |                |            |             |           |
| Mitigation  | To support this objective, policies that promote new retail development that would not undermine the vitality and viability of existing retail centres will be required. Similarly policies which support the protection of small rural services and facilities such as shops and pubs will further assist this objective.  |            |                |            |             |           |
| 15. To promote appropriate tourism.   |   |            |                |            |             |           |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |
| Performance   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |
|   | +   | +          | 0              | +          | +           | +         |
| Commentary  | As with Option 5, increased development and infrastructure could contribute to a tourist infrastructure across the intervention areas and in particular support tourism led regeneration in Barry. Tourism development in these settlements will depend upon the businesses that start up as growth continues. By supporting a number of rural settlements, the strategy has the potential for enhancing the tourism offer in the rural vale.   |            |                |            |             |           |
| Mitigation  | In support of this objective, the plan should include policies that promote appropriate tourism development within both urban and rural areas.  |            |                |            |             |           |

| Performance |   |
|-------------|---|
| ++          | Option is highly likely to assist the Sustainability Objective                    |
| +           | Option is likely to assist the Sustainability Objective                           |
| 0           | Option is likely to have no effect on the Sustainability Objective                |
| -           | Option is likely to conflict with the Sustainability Objective                    |
| --          | Option is highly likely to conflict with the Sustainability Objective             |
| +/-         | Option is likely to assist and conflict with the Sustainability Objectives        |
| ?           | The effect of the Option on the Sustainability Objective is unclear               |
| +<br>-      | Are the benefits/effects short, long or medium term? ( 5, 10 and 15 year periods) |

Option 8a (based on Option 5 and Option 4 combined): Concentrate development opportunities in Barry and the South East Zone. The St. Athan area to be a key development opportunity. Other sustainable settlements (including a new rural settlement at Llandow Newydd) to accommodate further housing and associated development.

|                            |  |            |                |            |             |           |  |
|----------------------------|--|------------|----------------|------------|-------------|-----------|--|
| <b>LDP STRATEGY OPTION</b> | <b>Option 8a (based on Option 5 and Option 4 combined): Concentrate development opportunities in Barry and the South East Zone. The St. Athan area to be a key development opportunity. Other sustainable settlements (including a new rural settlement at Llandow Newydd) to accommodate further housing and associated development.</b>  |            |                |            |             |           |  |
| <b>SA OBJECTIVE</b>        | <b>1. To provide the opportunity for people to meet their housing needs.</b>   |            |                |            |             |           |  |
|                            | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|                            | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>         | +  | +/-        | 0              | +/-        | +/-         | -         |  |
| <b>Commentary</b>          | <p>This option implies that majority of new housing will be focussed in Barry and other settlements in the urban south east as well as the key settlement of St Athan. The Llandow Newydd proposal provides for some 2750 housing units over a 4 phase development period, 30% (some 850 units) of which will be affordable housing. The strategy would allow for development in the South East Zone where affordable housing need is highest, especially in Barry and Penarth as highlighted within the Council's Local Housing Market Assessment (2008). However, the provision of housing within a new settlement could restrict the extent to which affordable housing need is delivered in the South East Zone since a high proportion of the housing provided would be directed to Llandow Newydd, where the need for affordable housing is not as prevalent as that in the urban south east (Council's Local Housing Market Assessment 2008).</p> <p>Llandow airfield is relatively centrally located within the rural vale, and would go some way to meeting new housing needs in the rural vale. However, the delivery of housing to meet local needs within the area would not be fully realised during in the short to medium term, therefore reducing the effectiveness of the plan to meet its strategic objectives. Similarly, the concentration of a large number of units within a new settlement in the rural Vale would not address housing needs where they occur, or where anticipated growth is required. This could be detrimental to the vitality of smaller settlements and also maintain the relative high house prices in the rural Vale- therefore perpetuating affordability issues within specific settlements.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>          | To ensure that the SA objective is addressed, there will be a requirement within the LDP to ensure that an appropriate mix of housing is provided within new housing developments to meet the needs identified within the Local Housing Market Assessment. However, the potential for limited development opportunities during the plan period in the South East settlements and other rural settlements as the result of a new settlement located away from areas of need and projected demand would require a high percentage of affordable housing to be secured on new allocated sites within these areas which may not be viable.   |            |                |            |             |           |  |

| 2. To maintain, promote and enhance the range of local facilities. |   |            |                |            |             |           |  |
|--|---|------------|----------------|------------|-------------|-----------|--|
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +   | +/-        | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>  | <p>Positive benefits in terms of facilities provision would be realised in the south east zone settlements, St Athan, the sustainable rural settlements and also at Llandow Newydd. However, for Llandow Newydd it is anticipated that the extent of the facilities provided would be limited due to the proposed 2750 dwellings. It is generally accepted that for a new settlement to be sustainable (that is support a sufficient range of services and facilities) it would have to be between 4,000 and 5,000 dwellings (see Best Practice in Urban Extensions and New Settlements, TACPA 2007, and Eco Towns Prospectus Communities &amp; Local Government 2007). Accordingly, whilst services within nearby settlements such as Cowbridge and Llantwit Major would be bolstered by increased demand, this SA objective is unlikely to be achieved within the Llandow Newydd proposal.</p> <p>The provision of new facilities as identified in the Llandow Newydd proposal would create some positive effects in and around the surrounding area. However these facilities could undermine the vitality and viability of the neighbouring settlements as residents may choose to relocate to Llandow Newydd. There could be some extraction from local centres in Cowbridge and Llantwit Major although it is acknowledged that they cater for niche markets.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>  | <p>The inclusion of policies for ensuring that appropriate community facilities are provided as part of any new development, and that existing community facilities are safeguarded would assist in meeting this objective. However, as indicated above, the option could lead to redevelopment pressures on existing facilities as a consequence of under use/viability.</p> <p>Appropriate phasing mechanism will need to be applied to the new settlement so as to ensure that facilities and services are provided in tandem with the occupation of dwellings.</p> <p>In addition, the use of section 106 agreements/ planning conditions could ensure that the development includes an appropriate mix of facilities, which could make it more sustainable and also assist in mitigating against the loss of vitality and viability within neighbouring centres. However the reliance on section 106/planning conditions highlights the level of intervention required to make a development in an unsustainable location sustainable.</p>   |            |                |            |             |           |  |
| 3. To maintain and improve access for all.                         |   |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
| Performance  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|  | +   | +/-        | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>  | <p>Positive effects would be realised in the urban south east settlements and St Athan in terms of access to the built environment. Mixed effects would be realised in rural areas, with the majority of benefits being realised within the new settlement, and to a lesser extent within sustainable rural settlements as a result of the limited levels of growth planned. However, for residents living in the other rural settlements existing rural access issues may not be addressed. The development of a new settlement also presents an opportunity for the creation of an accessible built environment.</p>  |            |                |            |             |           |  |
| <b>Mitigation</b>  | <p>Design policies within the LDP and Building regulations would provide the key mitigation tool for all development.</p>   |            |                |            |             |           |  |

| 4. Reduce the causes of deprivation.                  |   |            |                |            |             |           |     |
|---|---|------------|----------------|------------|-------------|-----------|-----|
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |     |
| Performance   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |     |
|   |   | +          | +              | 0          | +/-         | +/-       | +/- |
| Commentary  | <p>This option would help to tackle the causes of deprivation in the urban south east settlements, particularly within Barry where deprivation is a key issue (WIMD 2005)</p> <p>The facilities created by the Llandow Newydd development may also serve other settlements in the rural Vale currently with poor access to services, as would development in other rural sustainable settlements. However, this would not fully address this issue in the settlements where this is a localised problem.</p>  |            |                |            |             |           |     |
| Mitigation  | It would be difficult to develop policies that could assist fully in addressing social and economic deprivation within the rural vale when the strategy option itself seeks to focus development primarily within a new rural settlement, where access to facilities and services is a major issue.   |            |                |            |             |           |     |
| 5. To maintain, protect and enhance community spirit. |   |            |                |            |             |           |     |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |     |
| Performance   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |     |
|   | +   | +          | 0              | +/-        | +/-         | +         |     |
| Commentary  | <p>Growth and regeneration in these settlements may enhance community spirit through an increase in the provision of new facilities and good design.</p> <p>The Llandow Newydd development, if well designed and executed has potential to create a settlement with a strong identity which could be enhanced by local residents. However, this would not be realised until the development is fully developed. To achieve this objective, attention would need to be given to obviating any risk of Llandow Newydd becoming a dormitory town, predominantly serving the needs of the commuting population.</p> |            |                |            |             |           |     |
| Mitigation  | Policies that ensure new development is properly integrated into existing communities as well as the provision of new community facilities, improved employment opportunities and affordable housing will make a positive contribution within the settlements identified for growth.  |            |                |            |             |           |     |

| 6. To minimise the causes and manage the effects of climate change. |  |            |                |            |             |           |  |
|---|--|------------|----------------|------------|-------------|-----------|--|
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +  | -          | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>   | <p>Within the South East Zone and within the St Athan area, this option could contribute to a reduction in commuting as there would be more employment opportunities that are easily accessible by public transport hence fewer vehicular greenhouse gas emissions. However, for Llandow Newydd, existing employment opportunities are unlikely to serve the needs of all residents and it is inevitable that there would be an increase in peak time commuting. It is also understood that there will be no new rail link serving Llandow Newydd due to the scale of the proposal. Therefore any significant investment in the bus network could have a detrimental impact on existing rural services.</p> <p>A new settlement would nevertheless provide opportunities for applying the latest building codes to increase energy efficiency and decrease impact on carbon emission. However in the near future it is likely that this will become mandatory for all new housing. Any new development particularly that associated with Llandow Newydd will lead to an increase in energy use and flooding potential, destruction of green spaces, increased rapid run off rates etc.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>   | <p>The location of any new development is a key determinant in the success of the plan in supporting measures that address climate change. Subsequently, to meet this objective the plan would need to ensure that Llandow Newydd provides adequate public transport facilities at the earliest stages, along with a suitable range of services and facilities for residents. However, as highlighted above this could undermine the ability of the plan to achieve other sustainability objectives elsewhere.</p> <p>In addition, employment opportunities in close proximity to the new settlement will be essential. This would have to be achieved by allocating employment land and promoting home working.</p>   |            |                |            |             |           |  |
| 7. To minimise waste.   |  |            |                |            |             |           |  |
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>  | +/-  | +/-        | 0              | +/-        | +/-         | +         |  |
| <b>Commentary</b>   | <p>The amount of proposed development is the same for all options and therefore the increase in the levels of waste generated will be the same. However, the South East Wales Regional Waste Plan and the Landfill Directive limits the levels of waste going to landfill. Similarly, National Planning Guidance will require the plan to identify preferred locations for new regional waste management facilities. However, Llandow Newydd could place additional pressure on the delivery of recycling services in the rural vale.</p>  |            |                |            |             |           |  |
| <b>Mitigation</b>   | <p>Ensure that the plan includes a policy that requires the provision of recycling facilities within new developments.</p>   |            |                |            |             |           |  |

| 8. To use land effectively and efficiently.                  |  |            |                |            |             |           |   |
|--|--|------------|----------------|------------|-------------|-----------|---|
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |   |
| Performance  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |   |
|  |  | +          | -              | 0          | +           | +/-       | - |
| Commentary   | <p>The South East Zone provides the opportunity to develop brownfield sites in sustainable locations. It is anticipated that major development within and adjoining Barry and St Athan would utilise previously developed land, but there is likely to be some greenfield housing.</p> <p>However, in the rural Vale the development of Llandow Newydd would result in a significant loss of productive agricultural land, this being some 51 hectares of grade 3a and 36 hectares of grade 3b (Reading Agricultural Consultants Report 2008) with the remaining 99 hectares of industrial land associated with Llandow Trading and Industrial estates (not within the control of the promoters) will remain in its current form. Development in the other sustainable rural settlements could utilise some Brownfield land, but there is also likely to be some Greenfield development adjacent to these settlements.</p> |            |                |            |             |           |   |
| Mitigation   | <p>Within the South East Zone policies should promote Brownfield sites over Greenfield sites and candidate site selection would mitigate against the loss of Greenfield sites. This could also assist in reducing the amount of Greenfield development within other sustainable rural settlements identified for development.</p> <p>However, with this option, Llandow Newydd would not be subject to the candidate site assessment and therefore no mitigation measures would be available for safeguarding the loss of currently productive agricultural land.</p>  |            |                |            |             |           |   |
| 9. To protect and enhance the built and natural environment. |  |            |                |            |             |           |   |
|  |  |            |                |            |             |           |   |
| Performance  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |   |
|  | +  | -          | 0              | +/-        | +/-         | +/-       |   |
| Commentary   | <p>Positive benefits would be realised in the urban South East Zone through enhancement and regeneration opportunities. In rural areas there could be a negative impact if the existing environment is adversely affected by new development.</p> <p>As stated above, the Llandow Newydd development would lead to the loss of productive Grades 3a and 3b agricultural land. This would have a negative impact on the natural environment.</p> <p>There could also be negative effects linked to schemes associated with the development, such as the Llysworney bypass. This road proposal is included within the adopted UDP and draft RTP and could be justified with or without the Llandow Newydd development.</p>   |            |                |            |             |           |   |
| Mitigation   | <p>Policies that promote good design and respect both rural and urban settings will be required to ensure that development contributes positively to the built environment. The location of development particularly where this is in close proximity to nature designations will need to be considered at the candidate site assessment stage. Where this may have an impact on nature designations ensure that appropriate mitigation measures are identified and imposed through planning conditions/obligations.</p>   |            |                |            |             |           |   |

| 10. To provide a high quality environment within all new developments.   |   |            |                |            |             |           |  |
|--|---|------------|----------------|------------|-------------|-----------|--|
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
|  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>   | +   | +/-        | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>  | <p>New developments have the opportunity to be well-designed from the outset in order to include high quality, sustainable materials; make efficient use of open space, access etc. and can promote a positive community spirit. This will apply to all intervention areas spread across the Vale of Glamorgan, and to the new rural settlement at Llandow through its careful execution.</p> <p>However, secondary effects associated with the potential impacts on the built and natural environment due to its location and high dependency on the car could offset any potential positive benefits, especially within the rural Vale.</p>   |            |                |            |             |           |  |
| <b>Mitigation</b>  | The new rural settlement should be well-designed from the outset in order to include high quality, sustainable materials, make efficient use of open space, access etc. and promote a positive community spirit. The development of the new rural settlement in this manner could set a precedent for development elsewhere in the Vale of Glamorgan. However, it would be difficult to offset the secondary effects identified above.  |            |                |            |             |           |  |
| 11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage. |   |            |                |            |             |           |  |
|  | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |  |
|  | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>   | +/-   | +/-        | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>  | <p>There are a large number of historic buildings, designations and protected monuments in the Vale of Glamorgan. In urban centres, there are a number of listed buildings, conservation areas and ancient monuments, which sensitive development could enhance and promote.</p> <p>Growth will provide opportunities in urban areas to improve the quality of cultural and historic environments, particularly with regard to historic buildings. Although new development may offer the opportunity to enhance and promote the quality of the cultural/historic environment, there is a risk that development may be insensitive to these assets. However, in the majority of cases they are protected by legislation and planning policy.</p> <p>There are heritage features of value in rural areas that may be affected by new development.</p> <p>Development of the Llandow Newydd settlement could adversely affect landscape and heritage value in the immediate area.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>  | The location of development particularly where it is in close proximity to nature designations will need to be considered at the candidate site assessment stage. Where this may have an impact on nature designations ensure that appropriate mitigation measures are identified and imposed through planning conditions/obligations.  |            |                |            |             |           |  |

| 12. To reduce the need to travel and enable the use of more sustainable modes of transport. |  |            |                |            |             |           |  |
|---|--|------------|----------------|------------|-------------|-----------|--|
|   | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
| Performance   | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
|   | ++   | --         | 0              | +/-        | +/-         | +/-       |  |
| Commentary  | <p>Focusing development within the South East Zone where there is already a large population and good access to public transport should have a positive effect on local sustainable transport use. Similarly, focussing development around other sustainable rural settlements could also improve access to sustainable transport modes as a cascade effect.</p> <p>The Llandow Newydd proposal includes an element of office premises and it is also adjacent to two existing employment sites. Therefore there is the potential for residents of the new settlement to reduce their need to travel for employment purposes. However it is unlikely that the office development would attract end users as there is little need for this within the rural vale (as supported within the Council's Employment Land Study). In addition existing employment opportunities at Llandow Trading and Industrial Estates are unlikely to serve the needs of all residents and therefore there would inevitably be an increase in peak time commuting.</p> <p>It is therefore likely that over time Llandow Newydd would generate wider traffic congestion through in and out-commuting, although much depends upon the actual provision of public transport links. However, when compared to other new settlements in the UK, it is unlikely that this would address issues relating to the dependence on private cars in rural areas, nor is it likely to reduce the need to travel to existing major urban centres for higher value services and facilities.</p> <p>Therefore, in the rural Vale isolation of settlements may continue to be an issue, as there would be limited provision of facilities and employment in rural communities. Bus service provision is considered to be poor in Aberthaw (West), Cog, Penmark, Colwinston and Penllyn amongst other rural settlements (as detailed in the LDP Sustainability Appraisal Draft Scoping Report, February 2007). Any major investment in the bus network to serve Llandow Newydd is likely to have an adverse effect on other rural bus services.</p> <p>While there are likely to be improved local public transport links within the areas of Cowbridge, Llantwit Major and St Athan this could result in longer journeys to Bridgend and Cardiff which are likely to require a change of service. The Llandow Newydd site is adjacent to a rail line, but it is understood that there will be no new rail link servicing the development due to the scale of the proposal and the limited service capacity on the Vale of Glamorgan railway line.</p> |            |                |            |             |           |  |
| Mitigation  | <p>The location of any new development is a key determinant in the success of the plan in supporting measures that address climate change. Subsequently, to meet this objective the plan will need to ensure that adequate public transport facilities are provided at the earliest stages of development, along with a suitable range of services and facilities for residents.</p>   |            |                |            |             |           |  |

| 13. To provide for a diverse range of local job opportunities. |  |            |                |            |             |           |  |
|--|--|------------|----------------|------------|-------------|-----------|--|
|  | What is the predicted effect of the option on each S.A Objective?  |            |                |            |             |           |  |
|  | Urban SE   | Rural Vale | Trans-boundary | Short term | Medium term | Long term |  |
| <b>Performance</b>   | +  | -          | 0              | +/-        | +/-         | +/-       |  |
| <b>Commentary</b>  | <p>Development is likely to provide opportunities for employment in urban areas such as Barry and Penarth, where unemployment is an issue and the majority of available employment is in Barry, therefore limiting the extent to which this objective can be achieved in the rural vale.</p> <p>Provision of new housing at Llandow Newydd, in close proximity to existing and proposed employment sites, presents the opportunity for residents to reduce their need to travel for employment purposes. However it is unlikely that the proposed office development would attract end users as there is little need for this within the rural vale (as supported within the Council's Employment Land Study). In addition existing employment opportunities at Llandow Trading and Industrial Estates are unlikely to serve the needs of all residents and therefore there would inevitably be an increase in peak time commuting. Furthermore the loss of good quality agricultural land would have a negative financial impact of the farms affected (Reading Agricultural Consultants Report 2008).</p> <p>It may be difficult to attract some large employers to smaller settlements due to inappropriately sized employment sites therefore limiting the range of job opportunities that can be provided in rural settlements, although options for smaller scale employment opportunities within the more sustainable settlements could increase rural employment opportunities. The proposed DTA St Athan facility is expected to create jobs.</p> <p>The Llandow Newydd development and the associated Llysworney Bypass would improve the attractiveness of the existing employment sites and could offer increased local job opportunities.</p> |            |                |            |             |           |  |
| <b>Mitigation</b>  | The location of any new development is a key determinant in the success of the plan in supporting this objective and on the basis of the above the opportunity to maximise employment opportunities within strategic areas such as Barry may be limited due to the concentration of new development elsewhere.   |            |                |            |             |           |  |

| 14. To maintain and enhance the vitality and viability of the Vale of Glamorgan's town, district and local centres. |   |            |                |            |             |           |
|---|---|------------|----------------|------------|-------------|-----------|
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |
| Performance   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |
|   | ++  | +/-        | 0              | +          | +           | +         |
| Commentary  | <p>This option offers a significant opportunity to enhance the vitality and viability of existing centres through new development in the South East Zone and other sustainable rural settlements.</p> <p>There is an opportunity to make town centres attractive to local residents that currently use out-of-town retail developments (e.g. Culverhouse Cross). Town Centres can also be made attractive to businesses therefore reducing the number of vacant units (e.g. Barry). It is assumed that local community and leisure facilities will be provided together with new housing and employment development.</p> <p>However, for Llandow Newydd it is anticipated that the extent of the facilities provided may be limited due to the proposed 2750 dwellings. It is generally accepted that for a new settlement to be sustainable ( that is support a sufficient range of services and facilities) it would have to be of between 4,000 and 5,000 dwellings (see Best Practice in Urban Extensions and New Settlements, TACPA 2007, and Eco Towns Prospectus Communities &amp; Local Government 2007). Accordingly, whilst Llandow Newydd may increase demand for services within nearby settlements such as Cowbridge and Llantwit Major this would be contrary to meeting this SA objective.</p> |            |                |            |             |           |
| Mitigation  | To support this objective, policies that promote new retail development that would not undermine the vitality and viability of existing retail centres will be required. Similarly the protection of small rural services such as shops and pubs will further support this objective.   |            |                |            |             |           |
| 15. To promote appropriate tourism.   |   |            |                |            |             |           |
|   | What is the predicted effect of the option on each S.A Objective?   |            |                |            |             |           |
| Performance   | Urban SE  | Rural Vale | Trans-boundary | Short term | Medium term | Long term |
|   | +   | +          | 0              | +          | +           | +         |
| Commentary  | As with Option 8, increased development and infrastructure could contribute to a tourist infrastructure across the intervention areas. Increased development and infrastructure could contribute to a tourist infrastructure across the intervention areas and in particular support tourism led regeneration in Barry. Tourism development in these settlements will depend upon the businesses that start up as growth continues. By supporting a number of rural settlements, the strategy has the potential for enhancing the tourism potential of the rural vale.  |            |                |            |             |           |
| Mitigation  | In support of this objective, the plan should include policies that promote appropriate tourism development within both urban and rural areas.  |            |                |            |             |           |

## Core Strategic Policy – CSP1 – South East Zone

### Conclusion

|                    |       |      |        |      |      |      |     |
|--------------------|-------|------|--------|------|------|------|-----|
| <b>Objectives</b>  | ++ 4  | + 5  | +/- 2  | O 2  | - 2  | -- 0 | ? 0 |
| <b>All Results</b> | ++ 42 | + 63 | +/- 12 | O 69 | - 21 | -- 0 | ? 0 |

The policy realises very positive effects with 14 double and 31 single positive effects overall. The strong positive effects reflect the policy's strong emphasis toward regeneration, tourism development and focussing development at sustainable locations. The relatively small number of single negative effects relate to climate change and protection issues, which often go hand in hand with development based regeneration policies. The positive nature of the policy is backed up by the absence of double negative effects that would normally be expected from climate change impacts. However mitigation from sustainable transport (to a certain degree) and secondary effects of protecting greenfield land by focussing on brownfield, in-settlement development have modified the overall effect.

### Actions For Consideration

The policy does have some areas of concern that are not directly reflected by the SEA/SA effects.

- 1 The policy only seeks to promote sustainable transport as a means to address congestion, rather than adopting the principle of promoting sustainable transport with particular reference to addressing particular problems such as congestion.
- 2 Whilst Barry is a key focus of development to regenerate the area, the policy does not include any references to either brownfield development or restoring contaminated land to beneficial use.
- 3 The policy only seeks to manage important built and natural assets, rather than seeking to protect and enhance them. Managing assets could effectively realise their loss or denigration, which would be acceptable to the policy if this effect was realised in improving the living and working environment.

## Recommendations for Change

1. The policy promotes sustainable transport solely for the purposes of reducing congestion. Amending the policy to reflect the promotion of sustainable transport as a principle, with particular proposals aimed at addressing specific congestion issues, would realise greater positive effects.
2. The policy promotes the regeneration of Barry as a cornerstone of the LDP, but does not address either brownfield development or restoring contaminated land to beneficial use, both of which would realise significantly positive effects.
3. Policy only seeks the positive management of built and natural assets. Addressing their protection and enhancement would realise significant positive effects.

## Core Strategic Policy – CSP2– Strategic Regeneration Sites

### Conclusion

|                    |    |    |   |    |     |    |   |    |   |    |    |   |   |   |
|--------------------|----|----|---|----|-----|----|---|----|---|----|----|---|---|---|
| <b>Objectives</b>  | ++ | 4  | + | 5  | +/- | 3  | O | 1  | - | 1  | -- | 1 | ? | 0 |
| <b>All Results</b> | ++ | 39 | + | 87 | +/- | 15 | O | 66 | - | 18 | -- | 6 | ? | 0 |

Overall the policy realises positive effects. However the policy also realises two sets of double negative effects from climate change issues, as well as a number of single negatives. This antagonistic set of results reflects the nature of the policy, which addresses the development of two markedly differing settlements; the Barry redevelopment seeking to regenerate the historic built environment whilst the St Athan development seeking to build on the existing aerospace specialisation and using greenfield development to bolster employment and housing levels.

Many of the anticipated effects are tempered by the differences between the settlements and their proposed development. It is highly likely that, if the settlements were addressed independently, the anticipated effects would be more severe both positively and negatively. However, given that the purpose of the SEA/SA is to ensure environmental considerations are taken into account in decision-making, the strategic approach of offsetting effects from differing policies (or settlements) is appropriate for determining the strategic effects of the plan.

On balance the policy will realise significant positives and significant negatives that other policies in the plan will need to mitigate and address.

### Actions For Consideration

The assessment raises one issue that may warrant further considerations

- 1 The Barry Waterfront development is likely to have significant effects upon the maritime environment that the development is based around. This issue is not addressed by the policy.

## **Recommendations for Change**

1. The policy promotes development at Barry waterfront that could lead to significant adverse impacts upon the maritime environment. Addressing the issue of the protection of the Maritime environment would realise greater positive effects in terms of flood risk, water quality and, potentially, climate change issues.

## Core Strategic Policy – CSP3 – Housing Requirements

| Sustainability Objective / Aim   | Assessment Of Effects                     |             |           | Level of Certainty |
|--|---|-------------|-----------|--------------------|
|  | Short Term                                | Medium Term | Long Term |                    |
| <b>1 To provide the opportunity for people to meet their housing needs.</b>      | ++  | ++          | ++        | H                  |

|--------------------|-------|------|-------|-------|------|------|-----|
| <b>Objectives</b>  | ++ 4  | + 1  | +/- 2 | O 2   | - 2  | -- 0 | ? 0 |
| <b>All Results</b> | ++ 17 | + 35 | +/- 8 | O 134 | - 30 | -- 9 | ? 4 |

As a policy promoting development (housing in this instance) it would be normally be expected that the effects would show a balance of positives and negatives as a result of the competing economic and environmental factors. This policy is no exception. Significant negative effects realised through climate change and waste objectives and additional negatives for greenfield loss due, in part, to greenfield development associated with the allocated development at St Athan. Conversely the development of Barry waterfront, with its significant brownfield development will realise economic and environmental positives. In any SEA/SA Assessment the consideration of brownfield and greenfield development will be a balance between the conflicting effects. On balance, this assessment finds that the positive effects slightly outweigh the negatives (probably due to the economic slant of the SEA/SA Assessment). However, when all the results for the policy are taken into account the policy is considered to be neutral overall.

In assessing the policy it was assumed that the development at Barry waterfront would be prioritised and as such much of the brownfield development would occur during the short term, with the greenfield development taking place largely in the medium and long terms periods. This assumption has been reflected in a number of the assessment aims. It is important to note, however, that this prioritisation may not occur, or may occur over a more protracted period than has been assumed. If this were the case the assessment would realise a more negative slant, although it would still be likely to be assessed as neutral overall.

### Actions For Consideration

The policy, by its nature, realises diametrically opposing effects. It is not possible to mitigate the effects by policy changes, however. Consequently there are no recommended actions for this policy.

## Core Strategic Policy – CSP4 – Affordable Housing Provision

| Sustainability Objective / Aim  | Assessment Of Effects  |             |           | Level of Certainty |
|---|--|-------------|-----------|--------------------|
|   | Short Term   | Medium Term | Long Term |                    |
| <b>1 To provide the opportunity for people to meet their housing needs.</b> | ++   | ++          | ++        | H                  |
| A Provide a mix of dwelling types and tenure                                | +  | +           | +         | H                  |
| B Build in sustainable locations, with good access to local facilities      | ○  | ○           | ○         | H                  |
| C Provide affordable housing  | ++   | ++          | ++        | H                  |
| D Preference for previously developed land in sustainable locations         | ○  | ○           | ○         | H                  |
| <b>Comments:</b>  | <p style="text-align: center;"><b>Secondary, Cumulative, Synergistic</b></p> <p>B – Secondary positives (if policy related to previous housing policy, or stated that housing would be built in areas of need it would realise positive results)</p> <p>D – Secondary positives and site specific (if policy related to previous housing policy, or stated that housing would be built in areas of need it would realise positive results)</p> |             |           |                    |

## Core Strategic Policy – CSP4 – Affordable Housing Provision

### Conclusion

|                    |   |   |  |  |   |   |   |
|--------------------|---|---|--|--|---|---|---|
| <b>Objectives</b>  | <div style="background-color: #92d050; padding: 5px; display: inline-block;">++</div> 1 | <div style="background-color: #c1e1c1; padding: 5px; display: inline-block;">+</div> 1  | <div style="background-color: #d1c4e9; padding: 5px; display: inline-block;">+/-</div> 2 | <div style="background-color: #fff9c4; padding: 5px; display: inline-block;">O</div> 6   | <div style="background-color: #ffe0b2; padding: 5px; display: inline-block;">-</div> 1  | <div style="background-color: #ff0000; padding: 5px; display: inline-block;">--</div> 2 | <div style="border: 1px solid black; padding: 5px; display: inline-block;">?</div> 2  |
| <b>All Results</b> | <div style="background-color: #92d050; padding: 5px; display: inline-block;">++</div> 6 | <div style="background-color: #c1e1c1; padding: 5px; display: inline-block;">+</div> 21 | <div style="background-color: #d1c4e9; padding: 5px; display: inline-block;">+/-</div> 6 | <div style="background-color: #fff9c4; padding: 5px; display: inline-block;">O</div> 138 | <div style="background-color: #ffe0b2; padding: 5px; display: inline-block;">-</div> 33 | <div style="background-color: #ff0000; padding: 5px; display: inline-block;">--</div> 6 | <div style="border: 1px solid black; padding: 5px; display: inline-block;">?</div> 27 |

The Policy addresses the numbers of affordable units to be provided, but does not provide any spatial direction to where the affordable housing will be built. In addition to the lack of spatial direction, the Reasoned Justification identifies that RSLs can develop sites that lie outside settlement boundaries without stating any restrictions. Given this the only assumption that can be made for the assessment is that the policy allows affordable housing development anywhere in the county borough.

As a result the Policy has realised significant negative effects, with no less than six Objective sets being negative overall. This position is reinforced by 2 Objectives being double negative and a further Objective being single negative. Overall the policy realises 39 negative effects, compared to only 27 positive effects and 5 positive Objective sets. Three of the negative Objection sets are highly negative, namely those relating to Climate Change, Waste Management, and the effective and efficient use of land.

In addition to the above, the Policy realised 27 unclear effects, with two of these relating directly to Objectives. The unclear effects are generally realised where the effects from a particular Objective or Aim are, to some extent, dependent upon the location of the development or upon external factors not under the control of the plan. It should be noted that normal assessment practice would assume the worst-case scenario where the predicted effects are uncertain and **this would have undoubtedly realised significantly increased numbers of single and double negative effects** (to such a degree that the policy would have serious adverse environmental impacts). However, despite the fact that the policy does not spatially address affordable housing delivery, it would not be inappropriate to consider that affordable housing has strong links to volume house building and could be developed in similar areas to pro-rata levels. Given this it was considered appropriate to identify the unclear effects as unclear, instead of the worst-case scenario effects.

By contrast the Policy only realises one highly positive Objective set and one moderately positive set, both of which are related directly to the provision of housing.

Given the above the SEA/SA identifies that this policy, as written, will result in negative effects.

## Core Strategic Policy – CSP4 – Affordable Housing Provision

---

### Actions For Consideration

- 1 The policy only addresses the required level of provision of affordable housing. The policy should address the spatial delivery of affordable housing as well.
- 2 The Reasoned Justification does not qualify the issue of RSLs being able to develop anywhere (outside settlement boundaries).
- 3 There are three Objective sets (6 - Climate Change, 7 - Waste Management and 8 - Efficient and effective Use of Land) that are realising highly negative effects. Addressing the relevant issues for these could significantly reduce the negative effects.
- 4 There are two objective sets (9 - Protect and Enhance Built and Natural Environment, 14 - Vitality/Viability of Centres) that realise significant unclear effects. Addressing the relevant issues for these could realise more positive effects.

## Recommendations for Change

1. The policy needs to directly address the spatial distribution of affordable housing. It is recommended that policy and/or RJ include simple cross-referencing to other policies (especially the general housing policy CSP3) and addresses how affordable housing is delivered through (and therefore in the same locations as) general volume building. In addition, whilst the RJ sets out the areas of highest need, it fails to link the need to delivery. A simple reference to this would resolve the issue.
2. The statement in paragraph 5.36 relating to RSLs building outside settlement limits raises significant issues in SEA/SA terms, particularly when there is no acknowledgement to restrictions applied to it. It is recommended that the RJ be reworded to rephrase the statement, by referencing an exceptions policy that includes appropriate criteria to ensure that delivery is sustainable.
3. Climate change is a particular concern in this policy (as only 2 out of 7 factors are not negative and the Objective is a double positive), particularly as it realises significantly more negative effects than the general housing policy CSP3. Whilst it may be repetitive, it is well worth including references to:
  - i Social housing being generally built to higher environmental standards than general housing
  - ii Promoting sustainable construction
  - iii Potential for local renewable energy generation.

It must be noted that, as it stands, the assessment of this policy could lead the overall SEA/SA assessment to question the sustainability of the overall policy framework. If the above issues are addressed then it is likely that a re-assessment of the policy would realise a significantly more positive result, which would preclude such an adverse SEA/SA finding.

### Conclusion

|                    |              |             |               |              |             |             |            |
|--------------------|--------------|-------------|---------------|--------------|-------------|-------------|------------|
| <b>Objectives</b>  | <b>++</b> 1  | <b>+</b> 5  | <b>+/-</b> 2  | <b>O</b> 5   | <b>-</b> 0  | <b>--</b> 2 | <b>?</b> 0 |
| <b>All Results</b> | <b>++</b> 15 | <b>+</b> 42 | <b>+/-</b> 15 | <b>O</b> 138 | <b>-</b> 18 | <b>--</b> 9 | <b>?</b> 0 |

This is a development promotion policy that realises significant levels of positive effects. The policy realises 15 double positive effects and nearly three times as many single positives, related primarily on social and economic factors, and positive results from the knock-on effects of protecting the countryside by focussing development onto specific sites and areas.

The policy does realise nine double negative effects, relating directly to Climate Change and Waste Management, and both of these Objective sets realise highly negative effects overall. However this is only to be expected from policy that seeks to engender economic and employment growth. Outside of these two Objective sets only one set of negative effects are realised in the assessment, namely in respect of promoting technologies to reduce the need to travel.

The assessment also realises 15 positive/negative effects. These relate to Aims and Objectives that incorporate two factors, one of which is sustainable transport. These results realise positive effects from the one factor and negative from the sustainable transport element as 2 of the identified locations are not considered to be appropriately accessible by sustainable modes. The effects are not balanced out (as most cases of positive/negative effects would be) because the positive and negative effects are derived from differing sources and are not generally compatible.

Overall the policy delivers an assessment on the positive side of neutral that could, when cumulative effects of other policies are taken into account, realise a strongly positive assessment for what is essentially an allocation policy.

### Actions For Consideration

The policy realises positive effects and the content of the policy is clear. Consequently there are no recommended actions for this policy.

## Recommendations for Change

1. Paragraph 5.41 seems to set out policy in the Reasoned Justification by addressing the issues of employment land requirement and the promotion of diversification and enterprise in the rural economy. If these issues are to be addressed by this policy they should be included in the policy text rather than the Reasoned Justification. If the intention is to reference other policies that flesh-out the strategic policy then the paragraph could be reworded to remove ambiguity over whether it is policy or supporting and referencing text.

## Core Strategic Policy – CSP6 – Retail

### Conclusion

|                    |       |      |        |       |      |      |     |
|--------------------|-------|------|--------|-------|------|------|-----|
| <b>Objectives</b>  | ++ 1  | + 6  | +/- 1  | O 4   | - 1  | -- 0 | ? 0 |
| <b>All Results</b> | ++ 12 | + 66 | +/- 12 | O 132 | - 12 | -- 0 | ? 3 |

Generally a positive policy reflecting the focus of development in accessible and sustainable locations. Climate change factors have realised positive/negative effects as sustainable locations realise positive effects in reducing climate change causes, but overall development realises negative effects generally. The Negative effects are generally realised against waste factors, with a negative on reducing the need to travel, which has been mitigated down from a -- due to the focus on sustainable locations.

The policy impact upon historic built environment is unclear. The policy does not directly address the issue of protecting the built heritage, although the policy does look to maximise reuse of existing buildings. The policy's focus on developing the retail centres could, however, realise loss of built heritage

### Actions For Consideration

The policy is generally positive and the negative features will undoubtedly be addressed by other policies. Therefore there are no areas recommended for action.

The policy could be strengthened by addressing the issue of protection and enhancement of the built environment, in seeking to maximise reuse of existing buildings, and the promotion of new retail development.

### Conclusion

|                    |    |    |   |    |     |    |   |     |   |   |    |   |   |   |
|--------------------|----|----|---|----|-----|----|---|-----|---|---|----|---|---|---|
| <b>Objectives</b>  | ++ | 1  | + | 5  | +/- | 2  | O | 7   | - | 0 | -- | 0 | ? | 0 |
| <b>All Results</b> | ++ | 27 | + | 66 | +/- | 12 | O | 120 | - | 9 | -- | 3 | ? | 0 |

This policy realises strongly positive effects relates to the provision of sustainable transport infrastructure and the associate benefits derived from increasing accessibility (particularly to those areas of the county borough that will accommodate the majority of growth). The fact that 27 double positive effects have been recorded shows the positive effect that the policy will have, and this is only reinforced with the very large number of single positives that have also been realised. One issue to note, however, is that only one of the Objectives has realised a double positive effect, which indicates that the policy scores positively for specific factors rather than on the strategic level. Despite this 6 of the Objective sets are strongly positive (indicating that sustainable transport and accessibility have wide ranging effects) whilst conversely there are no Objective sets that are negative.

A number of positive/negative effects have been realised. These have been realised more from the way the SEA/SA assessment framework has been set up than from the direct effects of the policy. Some of the Objectives and aims include two factors that can realise wildly differing effects. This is the case with this policy as the Framework links:

- i) Minimising the causes of climate change (positive for provision of sustainable modes) and managing the effects of climate change (negative because of the land take for the provision of the infrastructure), and
- ii) Reducing the need to travel (highly negative because providing transport by any mode will encourage and facilitate travel) and provision of sustainable modes (highly positive, as this is the purpose of the policy).

If these issues were to be separated the resulting effects would enhance the positive nature of the policy.

Overall the policy positively contributes to the sustainability of the plan.

### Actions For Consideration

As a positive policy there are no recommended actions for consideration.

## Recommendations for Change

- 1 The first paragraph of the policy is reiterative in that it seeks sustainable transport to meet economic, social and environmental needs. It may be better, and be more comprehensive, to rephrase the policy so that transport improvements that meet social, economic and environmental needs, promote RTP objectives and assist in delivering sustainable development will be favoured.
- 2 the first sentence does not make sense in this context as it refers to the provision of a strategic highway network (which one would assume is already present). It is likely that this was intended to address an “improved” or “effective” strategic network.

## Core Strategic Policy – CSP8 – Sustainable Waste Management

| Sustainability Objective / Aim  | Assessment Of Effects                     |             |           | Level of Certainty |
|---|---|-------------|-----------|--------------------|
|   | Short Term                                | Medium Term | Long Term |                    |
| <b>1 To provide the opportunity for people to meet their housing needs.</b> | ○   | ○           | ○         | H                  |
| A Provide a mix of dwelling types and tenure                                | ○   | ○           | ○         | H                  |
| B Build in sustainable locations, with good access to local facilities      | ○   | ○           | ○         | H                  |
| C Provide affordable housing  | ○   | ○           | ○         | H                  |
| D Preference for previously developed land in sustainable locations         | ○   | ○           | ○         | H                  |
| <b>Comments:</b>  | <b>Secondary, Cumulative, Synergistic</b> |             |           |                    |

|--------------------|-----------|----|----------|----|------------|---|----------|-----|----------|---|-----------|---|----------|---|
| <b>Objectives</b>  | <b>++</b> | 0  | <b>+</b> | 4  | <b>+/-</b> | 0 | <b>O</b> | 11  | <b>-</b> | 0 | <b>--</b> | 0 | <b>?</b> | 0 |
| <b>All Results</b> | <b>++</b> | 12 | <b>+</b> | 24 | <b>+/-</b> | 6 | <b>O</b> | 186 | <b>-</b> | 9 | <b>--</b> | 0 | <b>?</b> | 0 |

With three quarters of the effects being neutral, this has to be considered to be a neutral policy. This sort of result would be expected from a policy that is targeted at a specific and limited landuse, as the limited scope of the proposed landuse is likely to have very specific and limited effects. The key consideration for such policies is the effects identified by the remainder of the indicators. These are dominated by positive effects with the only negative effects relating to sustainable locations, and reduction of energy use and air pollution.

Overall, whilst the policy is neutral, the assessment realises a positive slant.

### Actions For Consideration

The assessment raises no actions for consideration for this policy.

|--------------------|------|------|--------|-------|------|------|-----|
| <b>Objectives</b>  | ++ 0 | + 2  | +/- 3  | O 9   | - 1  | -- 0 | ? 0 |
| <b>All Results</b> | ++ 3 | + 24 | +/- 21 | O 165 | - 24 | -- 0 | ? 0 |

Whilst the policy seeks to protect existing resources and to promote the sustainable use and reuse/recycling of minerals, the policy also needs to be considered against the reason why the mineral resource is being protected, i.e. mineral extraction. In undertaking the assessment all 3 elements have been taken into account in identifying the predicted effects. It should be noted that the mineral extraction element would realise significantly more negative responses than the others, whilst reuse and recycling minerals would realise significantly more positives. The protection element will realise positives for protecting land but negatives for the sterilisation of land from development through its protection. This is borne out by the results of this assessment.

The majority (three fifths) of the identified effects are a neutral, whilst identical numbers of single positive and single negative effects have been identified. Twenty one results show positive and negative effects whilst the only departure from this position is the three double positive effects realised for the reuse of secondary resources.

Given the results this policy is considered to be neutral in effect.

### Actions For Consideration

The assessment arises no actions that need to be considered.

## Core Strategic Policy – CSP10 – Tourism

| <b>All Results</b> | <div style="background-color: #92d050; padding: 5px; display: inline-block;">++</div> 18 | <div style="background-color: #c8e6c9; padding: 5px; display: inline-block;">+</div> 42 | <div style="background-color: #e1bee7; padding: 5px; display: inline-block;">+/-</div> 21 | <div style="background-color: #fff9c4; padding: 5px; display: inline-block;">O</div> 105 | <div style="background-color: #ffe0b2; padding: 5px; display: inline-block;">-</div> 45 | <div style="background-color: #ff0000; padding: 5px; display: inline-block;">--</div> 0 | <div style="border: 1px solid black; padding: 5px; display: inline-block;">?</div> 6 |

This overall aim of the policy is to promote tourism in the county borough. Whilst the policy does seek to “protect and enhance” tourism facilities, it is not considered that the policy seeks to protected the tourism asset as a whole. The assessment has been undertaken on this basis and there are a number of instances (e.g. 11, 15C) where the policy has scored more negatively due to the lack of protection for the existing asset.

The policy promotes tourism development to encourage economic development in the county borough. As with all policies that promote development there are inherent positive effects, from economic and social factors, and negative effects, from environmental factors. This policy, however, seeks tourism development both within existing settlements and the expansion of rural based tourism as well. It would be expected that such a stance would engender more negative effects than would normally be expected, and this is the case for this policy, with the assessment realising 45 negative effects, 4 of which relate to Objectives. In addition 21 positive/negative effects were also identified, indicating a balance between significant positive and negative effects

However, offsetting the negative effects are 42 single positive and 18 double positive effects, as well as the positive elements in the 21 positive/negative effects. The positive effects slightly outweigh the negative effects, although the positive and negative effects are realised from differing sustainability pillars. Consequently there is little scope for mitigating or reducing the negative effects without also reducing or nullifying the positive effects, as positive action to mitigate negative effects will have an adverse impact upon positive effects by blunting them and vice versa.

Overall the policy realises an overall neutral assessment, although slightly to the positive side of neutral but not significant enough to warrant a positive assessment.

## Core Strategic Policy – CSP10 – Tourism

---

### Actions For Consideration

The assessment has raised one issue:

1. The policy is heavily biased toward the promotion of tourism at the expense of protecting the existing tourism and, to a lesser extent, natural assets. A positive and direct reference to ensuring that new tourism development does not adversely impact the existing tourism asset would realise positive effects.

## Core Strategic Policy – CSP11 – Built and Natural Environment

### Conclusion

|                    |       |      |        |       |      |      |     |
|--------------------|-------|------|--------|-------|------|------|-----|
| <b>Objectives</b>  | ++ 1  | + 3  | +/- 2  | O 7   | - 2  | -- 0 | ? 0 |
| <b>All Results</b> | ++ 21 | + 48 | +/- 12 | O 117 | - 39 | -- 0 | ? 0 |

The policy seeks to protect the built and natural environment. As such it will score highly positively on environmental factors but will realise significant negative effects in respect of economic factors due to the potential for the protection to preclude the opportunity for development. This is reflected in the assessed effects of the policy, with 48 single positives and 21 double positives relating primarily to environmental factors. The positive effects are bolstered by tourism related positives, which are derived from the secondary effect of protecting the natural and built tourism asset.

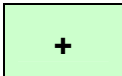

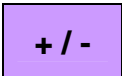

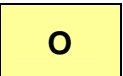

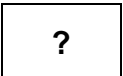

Negative effects are realised through impacts derived from the restrictions placed on development by the policy protection.

Overall the policy balances on the positive side and therefore the policy should be considered to provide a positive overall effect.

### Actions For Consideration

The assessment raises no issues that require further consideration.

## Consideration of Results

|                           |   |  |  |  |   |   |   |
|---------------------------|---|--|--|--|---|---|---|
| <b>CSP Policy Results</b> |  0 |  24 |  4 |  43 |  8 |  0 |  0 |
|---------------------------|---|--|--|--|---|---|---|

The Core Strategy Policies are the over-arching policies that set out the policy requirements and the broad spatial distribution of development for the LDP. As such they do include detailed policies that address specific policy matters and will not address detailed development matters. In undertaking the assessment the policies realised 8 overall negative effects that are addressed below. However, these negatives reflect, in part, the omission of the detailed considerations that should be addressed in the managing development policy set.

By contrast the policies realise 24 overall positive effects, predominantly related to the provision of development, bringing brownfield and contaminated land to beneficial use and in protecting the built and natural environment (as a result of focussing development into exiting settlement).

The policies also raise four positive/negative effects, which stem from tensions between protecting and developing land, or from tensions associated with the SEA/SA Objective or aim. These are also addressed below.

## Overall Negative Effects

- 6** *To minimise the causes and manage the effects of climate change.*  4,  2,  3 [9 of 11]  
The assessment realises significant negative effects from this Objective. The Core Policy set does not directly address the issue of minimising the causes of climate change, although secondary impacts of sustainable transport and accessibility elements of the policies do offset some of the highly negative effects, as transport emission are a key cause.

Transport is a major player in a number of the highly negative effects realised on the policy assessments as well. The development proposed in the Core Strategy Policies identifies development in sustainable locations (e.g. Barry) but also identifies development in places highly accessible by the car and less accessible by sustainable modes. In addition to this the policy aim of promoting tourism growth, and associated increases in visitor numbers, also realise significantly high levels of transport movement. The transport implications of the development strategy realise highly negative effects. However, mitigation for these effects are likely to be derived from detailed development issues, which are too detailed to be addressed by the Core Strategy Policies. Consequently it is always likely that negative effects would be realised at the Strategy level for this issue.

The Objective itself also causes an element of the negativity in the assessment as it asks for two different impacts, which are not mutually compatible, i.e it seeks the minimisation of the causes of climate change and the management of the effects of climate change. A policy would need to demonstrate positive contribution toward both elements in order to realise a positive effect, However the Core Strategy Policies are focussed on spatially locating development and whilst they ensure the development is located in accessible places served by a range of sustainable transport modes, they do little to manage the effects of climate change and would not, therefore, realise positive effects. In fact this is the source of the 3 positive/negative effects.

**6A Reduce air pollution (e.g. transport / industry emissions) (- - 1, - 7, + / - 1 [9 of 11])**

The negative effects for this Aim are directly related to transport issues, although a negative effects has been identified for the employment policy (CSP5) recognising that employment growth will realise increases in emissions. However the issue of traffic generation and congestion are the key factors and, as outlined above, the strategy will realise negative effects from traffic issues. Policy CSP1, along with policy CSP7 Transport, is the only policy to address sustainable transport improvements. However CSP1 only seeks improvements to ease congestion, whilst Policy CSP7 only seeks improvements that promote the objectives of the RTP. The Core Strategic Policies lack a general intention to improve sustainable transport infrastructure, which would reduce the negative impacts realised from transport related issues.

**6B Reduce energy consumption (e.g. promote energy efficient building) (- - 3, - 6, + / - 1 [10 of 11])**

The provision of development will inevitably lead to an increase in energy consumption. The Core Strategic Policies set out the development levels for housing, employment and retail and their spatial location. It is not unsurprising, therefore, that the policies realise significant negatives for this Aim. This Aim realises 9 negative effects from 11 assessments, with the other two being positive/negative and neutral. The lack of any positive effects indicates that there is little, if any, mitigation for this issue. The only mitigation from the policy set comes from sustainable transport, which has only a limited impact. It should be noted that energy efficiency, particularly within buildings, lies outside the scope of the LDP and, as such, remains outside the scope of both the LDP and this SEA/SA assessment.

**6E Protect biodiversity, flora and fauna from the effects of climate change (- - 0, - 5, + / - 2 [7 of 11])**

This Aim relates to protecting the natural environment from the effects of climate change. Whilst the Aim is simple it is comprised of two distinct factors. Firstly it raises the issue of whether the causes of climate change have been addressed. This has already been assessed under Objective 6, realising significant negative effects. Secondly it considers whether there is provision for the natural environment to adapt to the effects of climate change (which is distinctly different from just protecting it). The assessment scores negatively, which reflects that the policy suite does not address provisions that could enable the natural environment to

adapt. Mitigation for the issue of adaption could only really be addressed through specific policy intervention which could be delivered elsewhere in the policy framework.

## 6 Objective Set - Climate Change

As an Objective set the assessments do not realise any overall positive effects, with only 7 positive effects (5 from just one policy) realised from the total 77 effects. The negative nature of the results, and the marked lack of compensatory positive effects, indicate that consideration should be given to addressing issues of climate change through the Core Strategic Policies. As the LDP is hierarchical and the Managing Development and Managing Growth policies should provide specific policies for delivering the LDP strategy, it is unlikely that the lower policies, however stringently worded, could have sufficient weight to counter the negative effects from the Strategy.

### 7 **To Minimise Waste** (■ 2, ■ 5, +/- 0 [7 of 11])

It would be natural for a development plan to realise negative effects from this Objective purely because it would be promoting development. The main issue with regard to this Objective is that whilst 2 double positive effects have been realised, no double positives have been realised to provide mitigation or minimisation, even though the Core Strategic Policies include a policy on sustainable waste management. It should be noted, however, that the ability for a development plan to impact upon the generation of waste (which is the central issue) is limited. The Development Plan can provide the framework for waste to be managed sustainably, but there is little scope for it to address the sources of waste generation. Notwithstanding this, the plan could realise mitigating positives from addressing sustainable development and construction methods, prioritising redevelopment of existing buildings and using secondary sources of materials.

### 7C **Avoid landfill of waste** (■ 0, ■ 6, +/- 0 [6 of 11])

The issues with this Aim are similar to those outlined for Objective 7 above, i.e. the ability of the LDP to directly impact upon the generation of sources of waste that result in landfill of waste. In contrast to Objective 7 above, however, this aim realises double positive effects for Policy CSP8 – Sustainable Waste Management, which provides the mechanism for reducing the levels of waste that is landfilled. Whilst the policy does receive a majority of negative responses, the double positive effects of the policy CSP8 policy does balance out the overall effects. However, similar to Objective 7, further mitigation could be realised from addressing sustainable development and construction methods, prioritising redevelopment of existing buildings and using secondary sources of materials

**8D *Protect the countryside from inappropriate development, especially the best and most versatile agricultural land and areas of high landscape value*** (- - 0, - 5, +/- 2 [7 of 11])

This Aim is unusual in that it realises a majority of negative effects, but actually also realises a significant number of secondary positives as well. The Core Strategic Policies promote both brownfield and greenfield development that, under this Aim, realises the negative effects from the greenfield development. However the brownfield development realises secondary positive effects for focussing some development into existing centres, which takes pressure off the countryside. Further to this Policy CSP11 Built and Natural Environment realises a double positive effect that also balances out the negative effects. When the primary effects are considered the policy realises an overall negative effect. However, when the secondary effects are taken into account, the policy effects would be in balance and an overall neutral effect would be realised.

It should be noted that the Aim also contributes to some of the negative effects realised through the assessment. The Aim seeks the protection of three distinct things, the countryside from inappropriate development, protection of high-grade agricultural land, and protection of high value landscape. In assessment terms to realise a positive for this Aim it would need to address at least 2 of the three factors in order to be significant enough to warrant a positive result. Where only one of these matters is addressed it leaves the other two susceptible to negative effects. The negatives from the two matters are likely to outweigh the positives of the one matter and a more negative effect is realised.

**12B *Promote technologies to reduce need to travel (e.g. homeworking)*** (- - 1, - 3, +/- 0 [4 of 11])

This Aim realises no positive effects and realises one double negative and three single negative results. The Core Strategic Policies do not address the issue of technology to reduce the need to travel, and it is questionable whether the provision of such technology is within the scope of the development plan (which would mean that the plan could never realise positive outcomes). However, it should also be noted that neither the Policies nor Reasoned Justifications include any reference to this issue, which could provide mitigation even though it would be unlikely to change the negative effects.

It should also be pointed out that the ability of the LDP to influence “the need to travel” is extremely limited (if it can do it at all). Even allocating mixed-use development requires those living in the dwellings to walk to their place of work, requiring a “trip”, albeit on foot. Added to this the LDP is required to provide housing, employment retail and community/leisure development, meaning the LDP provides both origins and destinations for trips which would undoubtedly increase the need to travel. It is more feasible for a development plan to meet the other Government Transport Objectives of reducing the overall number of trips (e.g. mixed-use development resulting in combined trips), reducing the length of trips (providing sufficient facilities in the county borough to retain its population), promoting use of sustainable transport (locating development accessible by public transport) and reducing the number of short trips made by the car (increasing priority for pedestrian/cyclist movement).

---

As it stands this Aim could only realise a negative effect and the assessment results, with seven neutral effects, realise only a moderately negative effect.

## Overall Positive/Negative Effects

In general the overall positive/negative effects are realised over a juxtaposition between either two policy factors or two elements of the Objective or Aim. The positive/negative effects is realised where the positive and negative effects are of sufficient weight to be significant even though they balance each other out. Where positive and negative effects of lesser significance are identified then a neutral (balanced) effect would be recorded. The positive/negative effects need to be considered as the significance of the effects could have overall SEA/SA implications.

### **8A Retain Greenfield Land**

The positive/negative effects for this Aim stem from the fact that the Core Strategic Policies identify both brownfield and greenfield development. Strategic Policies need to set out the whole scope of the proposed development for the area, which would include the need for both brownfield and greenfield development. It is obvious that for most issues they would realise diametrically opposing effects and this borne out by the effects identified in the assessments and the overall effect. Detailed policies elsewhere within the policy framework will address the negative issues raised for both greenfield and brownfield development.

### **9 To Protect And Enhance The Built And Natural Environment.**

This is similar to the issues realised through 8A above, although it is the Aim that includes the greenfield / brownfield issue. The Aim requires that both elements be addressed to realise double positive or negative effects, when in truth where positives are realised for one element, negatives are likely to be realised for the other. It should also be noted that the assessments also realised one double positive and two single positive effects and no negative ones. Consequently, despite the overall positive/negative result, the Aim does realise positive effects, which would put this policy on the positive side of neutral.

### **12 To Reduce The Need To Travel And Enable The Use Of More Sustainable Modes Of Transport.**

Similar to Objective 9 above, the contradiction lies in the Aim rather than the policy. The issue of whether a development plan can address “the need to travel” is outlined above (Aim 12B), suffice it to say that the plan will always realise negative effects from this issue. However the Policy set does address the issue of accessibility and sustainable transport in many of the policies, which realises significant positive effects. If the sustainable transport element of the Aim was used in isolation the policy would realise overall positive effects, despite realising two negative effects in the assessments. Given that reducing the need to travel would be

---

a negative for any development plan, the Core Strategic Policies realise significant positive for sustainable transport and the policy should be considered to be positive as a result.

## **Conclusion**

The Core Strategic Policies realise a significant level of positive effects, which greatly outweigh the negative effects. However, the purpose of the SEA/SA assessment is to ensure sustainability (including environmental) considerations are taken into account, making the LDP more sustainable. The positive effects identify that the policies are realising benefits in sustainability terms. Consequently it is the negative effects that need to be considered and addressed to make the policies more sustainable.

The most significant negative issues revolve around Objective Set 6 – Climate Change, where over half of the overall effects were negative. Generally, where negative effects are identified for a policy, it is possible to mitigate or minimise them through detailed policies that should be included within the overall policy framework. However these assessments raise a significant issue at strategic level that is unlikely to be resolved through lower level policies. In this instance it is necessary for the Core Strategic Policies to take the lead in addressing the issues. It is, therefore appropriate for the policies to be amended either by inclusion of climate change matters into the existing policy set or the addition a new policy specifically directed towards addressing climate change.

The other main issue raised is the need for the plan to address the sources of waste generation, rather than the sustainable handling of waste. The scope for a development plan to address the issue of waste generation is limited and, as such, the plan should focus on elements that can contribute towards it. It would be advisable, therefore, that the plan includes policies that address sustainable construction, prioritising the reuse of existing buildings and the use of secondary materials in developments.

The issue of high quality agricultural land is not addressed in the Core Strategic Policies in contrast to other countryside elements that have been protected. Reference to the protection of high-grade agricultural land would address this issue.

Other negative effects are realised from procedural issues associated with the assessment process and, as such, do not reflect a negative slant to the Policy Set.

Overall the Core Strategic Policies are positive as they stand and would realise significant sustainability benefits. Addressing the issues raised by the assessments would strengthen the positive nature of the policies further.

---

## Recommendations

1. A policy addressing the issues of climate change is included in the Core Strategic Policies.
2. A policy addressing sustainable construction, reuse of existing buildings and use of secondary and recycled materials be included within the policy framework.
3. The protection of high-grade agricultural land be included within the plan, preferably within the policy framework to provide formal policy backing.

The policy is a general control over development, setting the broad parameters development proposals should seek to meet. As such the policy realises a significantly high number of positive effects (almost matching the number of neutral effects), including a high number of double positive effects. In contrast only 12 single negative effects were identified, relating primarily to climate change and minimisation of waste issues.

A significant number of positive/negative effects are also realised, derived from the diverse aims of promoting development whilst also protecting the built and natural environment, and exacerbated by some SEA/SA Objectives and Aims looking for more than one issue. Consequently, given the nature of the policy, it would be normal to realise a high incidence of positive/negative effects.

Overall the policy is highly positive in effect.

### Actions For Consideration

- 1 Despite the positive nature of the policy, the policy itself is difficult to interpret, as it does not set out how the criteria within the policy apply, i.e. does a development proposal have to satisfy all of them, some of them, and if so which are optional. Without this direction on how to implement the policy there is no method of resolving conflict between the Criteria, i.e. brownfield land can be of high ecological value, which could realise conflict between Criterion 8 and Criterion 9. Similarly farm development in the rural Vale is not going to support the objectives of the South Eastern Zone. For assessment purposes it was assumed that development would be required to satisfy all criteria. The policy would benefit from direction on how the policy is to be applied.
- 2 The term “EQUINE FACILITIES” in Criterion 3 is not defined and so it is unclear whether the policy is seeking to promote commercial horse related activities (e.g. pony trekking, breeding stables) or whether it seeks to proliferate individual provision for pet horses and horse culture. This should be clarified.

## MD1 – Location Of New Development

---

- 3 Criterion 6 supports development that “benefits” from existing infrastructure provision. The meaning of this is unclear. For assessment purposes it was assumed that this meant that proposed development would not compromise or overload existing infrastructure or would provide compensatory provision. The policy would benefit from clarification of this criterion.

## Comments on the Policy

1. The Policy and Reasoned Justification do not reflect the same policy priorities. The RJ is definitive in requiring new development to be located in areas where they are accessible by public transport; reduced the dependence on the private car; ensure efficient use and reuse of land and buildings and effectively manage resources. The policy merely supports such proposals and does not seek to resist proposals that do not meet these requirements.
2. The policy as written will **support** development where they meet the criteria, but does not identify what will happen if a development does not meet the criteria.
3. The policy is a list of Criteria, but the policy does not set out whether a development has to satisfy all, some or just one of them. In addition there is no guidance on how development that meets some criteria but not others will be considered.
4. Spelling - Criterion 2 – “. . .SETTLEMENTS AS KEY PROVIDERS”
5. Criterion 3 – there is confusion over the term “Equine Facilities”. Does this mean formal commercial stables providing activities like pony trekking or horse breeding, or to cater for need for individuals to accommodate their pet horses on farmers fields, which could lead to a proliferation of built structures throughout the countryside.
6. Criterion 5 – there is a spell correction “PROMOTE~~D~~” and it is questionable whether the opening phrase “Has access to” is required, as it seems to duplicate the term “Promote”.
7. Criterion 6 is confusing as it is uncertain why a development would benefit from existing infrastructure. It would be better if the Criterion addressed whether proposed development would overload existing infrastructure, rather than benefit from it. The second half of the criterion would then fit.
8. Criterion 7 – Wording duplication “USE OF”

## MD2 – Place Making

## MD2 – Place Making

### Conclusion

|                    |       |      |       |       |     |      |     |
|--------------------|-------|------|-------|-------|-----|------|-----|
| <b>Objectives</b>  | ++ 3  | + 6  | +/- 0 | O 5   | - 1 | -- 0 | ? 0 |
| <b>All Results</b> | ++ 24 | + 60 | +/- 0 | O 147 | - 6 | -- 0 | ? 0 |

The policy itself does not limit the scope of development subject to its provisions. However, the second paragraph of the Reasoned Justification requires development to make positive contributions to “the urban environment”. The assessment of this policy has been undertaken with the assumption that the policy applies to all developments in all locations.

The policy realises only six negative effects, all single negative. These negative effects relate to effective and efficient use of land and the promotion of sustainable design and construction, being realised from constraints that could be made in creating sense of place (e.g. from open space provision and traditional vernacular design).

The negative effects are more than negated by the 24 double and 60 single positive effects, which are realised from quality of design, protection of important assets and other social factors.

Overall the policy is quite strongly positive in its effects.

### Actions For Consideration

The SEA/SA assessment raised some issues in respect of the implementation of the policy:

- 1 The policy and the Reasoned Justification do not accord on the scope of the policy, i.e. the policy sets out it applies in all cases, the RJ only relevant to “urban environment”. The policy would benefit from a change that would address this issue.
- 2 The policy is a list of criteria, but the policy does not set out whether one, some, or all, criteria need to be satisfied. In addition there is no guidance on how conflict between criteria is to be considered.

## Comments on the Policy

- 1 The Policy and Reasoned Justification contradict each other. The Policy does not restrict the scope of the policy whilst paragraph 2 of the Reasoned Justification restricts the policy to the urban environment. This needs to be clarified and, if the policy is to apply to all development then it needs to be expressly stated in the policy text.
- 2 It is unclear how the policy is to be interpreted. The policy is a list of Criteria, but the policy does not set out whether a development has to satisfy all, some or just one of them. In addition there is no guidance on how development that meets some criteria but not others will be considered.
- 3 Criterion 3 of the policy seeks to ensure that all development, even that located in the countryside, provides new or enhanced areas of public realm, especially at key locations (town centres, major routes and junctions). It is unrealistic for unrelated development to make such provision and therefore the policy is not implementable as it stands.
- 4 Criterion 4 addresses retail centres, and whilst it seeks to provide active street frontages it does not reinforce the strategy aim of promoting the evening economy.
- 5 Criterion 7 includes the word “and” at the end, which implies that Criteria 7 & 8 should be read in conjunction.

## MD3 – Design of New Development

## MD3 – Design of New Development

### Conclusion

|                    |                 |                |                 |                 |               |                |               |
|--------------------|-----------------|----------------|-----------------|-----------------|---------------|----------------|---------------|
| <b>Objectives</b>  | <b>++</b><br>4  | <b>+</b><br>2  | <b>+/-</b><br>0 | <b>O</b><br>8   | <b>-</b><br>1 | <b>--</b><br>0 | <b>?</b><br>0 |
| <b>All Results</b> | <b>++</b><br>33 | <b>+</b><br>66 | <b>+/-</b><br>3 | <b>O</b><br>132 | <b>-</b><br>3 | <b>--</b><br>0 | <b>?</b><br>0 |

The policy realises significant positive effects, and only one set of negative effects relating to effective and efficient use of land. Only one positive/negative effects set was realised where positive effects for responding context and negative effects from not promoting high densities were the contributing factors.

As stated above a significantly positive policy realising nearly 100 positive effects, one third of which were double negative. Critically this is the first policy to scoring highly positive for climate change and as such is critical within the overall policy set.

Overall a highly positive policy.

### Actions For Consideration

The assessment findings are highly positive and as such there are no significant issues raised. The assessment did raise an implementation issue for one of the criteria however,

- 1 Criterion 8 requires development to make a positive contribution toward tackling climate change, whilst most new development (housing, employment retail etc.) would only increase the causes of climate change. It may be more appropriate for the criterion to address the issue of a development minimising the causes of climate change related to that development, rather than seeking an overall reduction. The second part of the Criterion could also play a significant part in that, wherever possible, provision to facilitate the adaptation to climate change could also be secured. It is recommended that the criterion be reviewed in light of this.

## Comments on the Policy

- 1 Criterion 3 seeks to protect ALL built and natural features, whether they are worthy of keeping or not. If applied strictly this Criterion could prevent all greenfield development as a green field is a natural feature, likewise the policy could prevent the demolition of existing buildings (built features) to allow much needed new development. The Criterion should be reworded to provide context for its application.
- 2 Criterion 4 seeks to ensure “no unacceptable impact” on amenity, but neither defines what an unacceptable impact is or in who’s opinion it is unacceptable, both of which weaken the effectiveness of the policy. The Criterion could be reworded to remove this weakness.
- 3 Criterion 7 repeats exactly the policy content of MD2 (5). Given that the policies in this policy set should be applied together there is no reason to repeat a criterion, unless there is something different in the way it will be interpreted in the second policy. This is not the case here, so the duplication should be removed.
- 4 Criterion 8, if applied as written, would be overly prescriptive in nature, as it requires both the reduction in causes of climate change and positive contribution towards the adaptation to the impacts of climate change. The first part of the policy is particularly difficult to comply with. The SEA/SA assessments identify that all built development (housing, employment retail etc) will result in increased causes of climate change. It may be better for the policy to seek to minimise the effects of climate change (which could be realised through sustainable design and construction techniques) rather than their reduction from current levels. In terms of the second issue there is significant scope for development to make positive contributions in this respect. Given this it is recommended that either the criterion be split into two linked Criteria, with the first addressing minimising climate change effects and the second seeking provision for adaptation to climate change effects, or the Criterion be redrafted to reflect the overall aim tackling climate change through two specific sub-clauses, the first seeking to minimise causes of climate change and the second seeking provisions within new development for adaptation to climate change.

### **Suggested wording for revised Criterion 8**

8. *The proposal tackles the impacts of climate change by:*
  - a. *Ensuring the proposed development minimises the causes of climate change associated with the development, and*
  - b. *The proposal incorporates provisions to facilitate the adaptation to the effects of climate changes wherever possible*

## MD4 – Community Infrastructure and Planning Obligations

The policy provides the mechanisms for the plan to deliver community and other necessary infrastructure to support the principle of sustainable development. As such it realises significant positive effects, with no identified negative effects. This would normally be the case for a policy that facilitates necessary infrastructure, without containing any spatial reference in respect of the location of such infrastructure (which would normally realise negative effects).

A highly positive policy overall.

### Actions For Consideration

The SEA/SA assessment raised no issues that need to be considered.

## MD5 – Environmental Protection

| Sustainability Objective / Aim  | Assessment Of Effects                     |             |           | Level of Certainty |
|---|---|-------------|-----------|--------------------|
|   | Short Term                                | Medium Term | Long Term |                    |
| <b>1 To provide the opportunity for people to meet their housing needs.</b> | ○   | ○           | ○         | H                  |
| A Provide a mix of dwelling types and tenure                                | ○   | ○           | ○         | H                  |
| B Build in sustainable locations, with good access to local facilities      | ○   | ○           | ○         | H                  |
| C Provide affordable housing  | ○   | ○           | ○         | H                  |

## MD5 – Environmental Protection

### Conclusion

|                    |    |   |   |    |     |   |   |     |   |   |    |   |   |   |
|--------------------|----|---|---|----|-----|---|---|-----|---|---|----|---|---|---|
| <b>Objectives</b>  | ++ | 0 | + | 3  | +/- | 0 | O | 12  | - | 0 | -- | 0 | ? | 0 |
| <b>All Results</b> | ++ | 0 | + | 21 | +/- | 0 | O | 216 | - | 0 | -- | 0 | ? | 0 |

The policy has a very specific focus, i.e. the prevention of adverse environmental impact in respect of pollution, flood risk, land stability and coastal erosion. As a result it would normally be expected that the policy would realise a large number of neutral effects as the policy would only realise effects on the matters that it directly addresses. This is the case for this policy, with nearly 90% of the total number realising neutral results.

The only other effects realised are single positives realised for those issues directly relevant to the policy.

The policy seeks to ensure that proposed developments do not have adverse impacts in respect of pollution, flood risk, and land stability/coastal erosion. These are matters that often assessed through SEA/SA assessments. The policy effect is, therefore, to prevent the effects that proposed development might realise. As a result, a policy of this type will realise an extreme number of neutral effects when considered against an SEA/SA framework, as in this case with nearly 90% realising such effects

### Actions For Consideration

The SEA/SA assessments raised on issue in respect of interpretation of the Policy:

- 1 The Policy is contradictory. The Policy, in the first paragraph, seeks to ensure that the development can demonstrate that it will not result in unacceptable impacts. However, the second paragraph of the policy sets out what may be requires where proposals do have unacceptable impacts. As such it would be difficult to implement the policy. It is recommended that the Policy be amended to provide consistency.

## Comments on the Policy

- 1 The Policy is contradictory. The Policy, in the first paragraph, seeks to ensure that the development can demonstrate that it will not result in unacceptable impacts. However, the second paragraph of the policy sets out what may be required where proposals do have unacceptable impacts. This position renders the policy impossible to implement. In consideration it would be more appropriate for the policy to promote development that does not realise unacceptable impact, but require that a development proposal mitigates against any unacceptable impact to ensure that it is reduced to an acceptable level.
- 2 The term “unacceptable impact” is both undefined and unrelated to the factors set out in points 1 – 6. Some guidance needs to be given on what is to be considered acceptable and what is not. The Reasoned Justification sets out that the council will determine acceptability in conjunction with appropriate bodies such as EAW and HSE. However this only further exacerbates the issue of certainty and clarity that the use of the term “unacceptable impact” brings. It is recommended that the Policy be amended to set out a more defined and specific measure of whether a proposal results in a level of pollution that should not be permitted, than the current “unacceptable Impact”. An alternative to this would be to provide a firm definition of what “unacceptable impact”.

| <b>Objectives</b>  | ++ | 0 | + | 3  | +/- | 1  | O | 10  | - | 1  | -- | 0 | ? | 0 |
| <b>All Results</b> | ++ | 6 | + | 30 | +/- | 21 | O | 156 | - | 24 | -- | 0 | ? | 0 |

Whilst policies seeking the protection of the environment would be perceived as being significantly positive in SEA/SA terms, the protection of important areas will have the knock-on effect of restricting the availability of land that could otherwise have been used effectively and efficiently for development. The 24 negative effects realised in this assessment reflect this position, with negative results for location of development (generally and employment in particular), renewable energy generation, cycle/pedestrian provision and restricting brownfield and contaminated land development as regenerated sites can have particularly high value biodiversity. The potential restriction of land has negative effects for the effective and efficient use of land, which realises the single negative Objective result.

Conversely the positive effects are realised from protection of greenfield land and the associated benefits for the environment and climate change issues that result. It should be noted that only 2 sets of double positive effects were realised, where high numbers of double negatives would normally be expected. This is due to the fact that the policy restricts its scope by identifying a limited range of developments to which it applies, meaning that some potentially damaging developments would not be precluded. Consequently the significance of the positive effect is reduced.

The tension between the protection of land and its restricted potential realises the significant number of positive/negative effects, where both side have an equal impact.

Overall the policy is only slightly positive and would be considered to be neutral overall. However, if the policy were to be reworded to ensure that it applied to all developments, the positive effects identified in the assessment would be more significant and the policy would likely be considered to be positive overall

## MD6 – Promoting Biodiversity

### Actions For Consideration

The principal issue raised by the SEA/SA assessment relates to the limitation placed on the policy by specifying the types of development to which the policy would apply. The policy would realise significantly more positive effects if this restriction were removed.

:

- 1 The policy and the Reasoned Justification do not accord on the scope of the policy, i.e. the policy sets out it applies in all cases, the RJ only relevant to “urban environment”. The policy would benefit from a change that would address this issue.
- 2 The policy is a list of criteria, but the policy does not set out whether one, some, or all, criteria need to be satisfied. In addition there is no guidance on how conflict between criteria is to be considered.

## Comments on the Policy

- 1 The policy and reasoned justification are contradictory in that they require both “no-net loss” and “net gain” of biodiversity interest. This introduces inconsistency into the implementation of the policy. It would be better for the policy to adopt one of the options as the basis for the policy and align all requirements to it. To this end it may be better to seek “no-net loss” and then to aim for net gain wherever that is practical.
- 2 The policy only applies to residential, commercial (assumed to be employment and retail uses) and community development as these are expressly stated in the policy. This omits potentially beneficial and contributory developments such as land reclamation and minerals developments, and also excludes potentially damaging developments, such as agricultural and non-commercial leisure/recreation uses. It also fails to acknowledge that small scale residential, commercial and community development may not be capable of meeting the requirements to provide net gain in biodiversity. Given that the policy aims to protect, and wherever possible enhance, biodiversity the policy would benefit from:
  - i) Amendment to remove reference to specific forms of development
  - ii) Inclusion of a context for the rational application of the policy
- 3 The final paragraph of the policy needs to be reworded, as the final two lines are not coherent. This part of the policy seems to be requiring development proposals, which would have a negative impact on locally important biodiversity areas and/or priority habitats, to justify why they need to be located in that particular location and that the need for the development outweighs the need to protect the biodiversity interest. If this is the case, the policy should be reworded to reflect this.

This policy allows for affordable housing development to take place outside settlement boundaries in Minor Rural Settlements, where justified on need. The basic premise of the policy is to allow development outside of settlement limits that would not normally be acceptable, i.e. a build anything-anywhere form of policy. Whilst it is acknowledged that the rural affordable housing exceptions policies are set out in national guidance and that the aim of the Welsh Government is to maximise affordable housing delivery, an unfettered develop anywhere policy can have serious negative impacts, which have been realised through this assessment.

The policy realises as many double negative effects as it realises total positive effects (both single and double). The double negative effects are realised across a range of issues, namely Sustainable Transport, protection and enhancement of built environment, protecting countryside/greenfield land, promoting brownfield development, and delivering high quality development. In addition to this the policy restricts the size of developments to less than 10 dwellings, which limits the scope of development to provide any additional community or local facilities. This, along with not locating development in sustainable locations and local distinctiveness, realise the majority of the 57 single negative effects. The negative effects cover a wide range of issues, reflecting the potential for the policy to realise significant adverse impacts.

By contrast the assessment realised just 6 double positive effects (provision of affordable housing and meeting current and future users needs) and just 21 single positives (rural diversification, community spirit, deprivation, need, housing provision). As can be see the positive effects are very specific to the issue of housing provision (particularly affordable housing) and the in respect of social factors, reflecting that the policy has a specific purpose and intention.

The SEA/SA assessment can only conclude that this policy is highly negative and will lead to significant adverse impacts in the environment. The policy lacks any real constraints against which adverse impacts could be avoided or mitigated and consequently there are not sufficient positive effects to balance up the negative effects.

## MD7 – Affordable Housing In Rural Areas

### **Actions For Consideration**

The policy seeks to allow affordable housing in locations that would not normally be permitted. This opens the door to a potential scenario of build anything anywhere. In order to prevent such a scenario it would be necessary to include sufficient constraints and caveats to ensure that a significant amount of control is maintained over the impacts realised through implementation of the policy. These are not included in the policy.

In addition to this the justification for the location of the affordable housing is based on need, rather than locational factors. This raises the issue of how conflict with other policies in the plan, e.g. MD6 – Promoting Biodiversity, is to be considered and what weighting is to be given to the respective elements, which could lead to inconsistencies in decision making.

Given the above, it is recommended that:

- 1 The policy would benefit from amendment to include, or cross reference to, factors that will be taken into account in considering the appropriateness of the proposed location for affordable housing development, and how conflicting issues will be addressed.

|--------------------|----|---|---|----|-----|---|---|-----|---|----|----|---|---|---|
| <b>Objectives</b>  | ++ | 0 | + | 5  | +/- | 1 | O | 7   | - | 1  | -- | 1 | ? | 0 |
| <b>All Results</b> | ++ | 3 | + | 48 | +/- | 6 | O | 156 | - | 18 | -- | 6 | ? | 0 |

The policy addresses the issue of the conversion and rehabilitation of existing buildings in the countryside. By its very nature the policy is restricted in its locations as it addresses existing buildings in their current location. Consequently the majority of single negative effects identified in the assessment relate to Sustainable Transport, as it is likely that such buildings are located in fairly isolated places that are unlikely to be sustainable locations. Objective Set 12 - sustainable transport, is a fully negative set also reflecting this.

In addition to the existing buildings not being located in sustainable locations, the existing building being renovated or converted are not likely to have been designed to be energy efficient. Consequently the climate change factors realise significant negative effects, with 6 double negative effects related specifically to reducing causes of climate change and energy efficiency.

By contrast the assessment realises positive effects for a wider range of issues including housing need, the protection of culture, heritage and built environment, tourism, entrepreneurship, quality and character, the efficient use of land and reuse of buildings, with Objection Set1 – Housing Need and Objection Set 8 – Efficient and Effective use of land both being positive Objections sets.

Any policy addressing the issue of existing buildings will realise negative effects for sustainable transport and climate change, these are a natural result of such a policy. This policy does include a significant level of positive effects that more than outweigh the expected negative effects and as such the assessment concludes that this policy is positive overall.

It should be noted that the assessment assumed slightly more negative effects from sustainability issues than would normally be the case. Whilst the policy requires that due regard be taken of the sustainability of the site in respect of services and facilities, it does not identify that proposals should be resisted where they are not sustainable. In addition it also raises the issue of whether such proposals could, or would, be refused on sustainability grounds alone. Given this uncertainty the assessment assumed greater significance of negative impact for the sustainability factors.

### Actions For Consideration

The Assessment raised no specific issues that would benefit from further consideration.

## MD9 – Replacement Dwellings In The Countryside

### Conclusion

|                    |    |   |   |   |     |   |   |     |   |    |    |   |   |   |
|--------------------|----|---|---|---|-----|---|---|-----|---|----|----|---|---|---|
| <b>Objectives</b>  | ++ | 0 | + | 2 | +/- | 1 | O | 11  | - | 1  | -- | 0 | ? | 0 |
| <b>All Results</b> | ++ | 0 | + | 9 | +/- | 3 | O | 204 | - | 18 | -- | 0 | ? | 3 |

There is a conflict between the policy and reasoned justification relating to the implementation of the policy. The policy sets out that proposals must satisfy both Criterion 2 (Structural Soundness) and Criterion 3 (Constraints prevent appropriate extension), whilst the reasoned justification requires that proposals satisfies one or other of the issues. Given that the two criteria are unlikely to be totally compatible with each other, the assessment of the policy assumes that proposals should satisfy only one of the criteria. If it is intended that proposals satisfy both criteria the proposal is likely to realise more neutral effects as the ability of the policy to deliver development would be compromised.

Overall the policy realises an overwhelming number of neutral effects (86% of all effects). This reflects that the policy is highly issue specific, apposition that, in assessment terms, would realise a high level of neutral effects due to the limited scope that would realise positive or negative effects.

The policy realises 18 negative effects relating to retaining greenfield land (this could realise positive effects if the issues of the siting of the replacement dwelling and the nature and extent of residential curtilages is addressed in the policy), sustainable location, minimising waste and secondary materials (realised because the buildings are being removed rather than renovated) and local distinctiveness. However these negative effects would be normal for any policy with such a specific remit.

By contrast the policy realise only 9 positive effects, relating to housing needs, reducing deprivation and needs of current and future users.

Overall, despite the fact that the twice as many negative effects are realised when compared to positive effects, the overall significance of the low numbers of effects means that the policy can only be considered to be neutral.

## MD9 – Replacement Dwellings In The Countryside

### Actions For Consideration

The assessment has raised the following issues that warrant further consideration

- 1 The policy and Reasoned Justification are contradictory. The policy requires proposals to satisfy both Criterion 2 and Criterion 3, but the Reasoned Justification identifies that proposals need satisfy only one of the criteria. The Policy and Reasoned justification should be amended to ensure they are compatible.
- 2 The policy does not require that the replacement dwelling be built on the same footprint as the previous building (there would be exceptions for those buildings that are constrained from appropriate extension). This could result in buildings being removed and being relocated a significant distance from their original position and incorporating land that was originally outside the curtilage of the existing dwelling. The policy would benefit from addressing the location of the replacement dwelling within the site.
- 3 The policy does not address the issue of curtilages. If a dwelling is relocated outside the original curtilage (as outlined in 2 above), a new residential curtilage would need to be identified which could significantly increase the extent of residential curtilage. The policy would benefit from addressing this issue and the potential adverse impacts this may cause.

## Comments on the Policy

- 1 The policy requires clarification of how all the criteria are to be satisfied.
- 2 The policy, as written, permits the loss of buildings of architectural or historic merit, if they are either constrained from extension or are unsound structurally. The policy should seek to clarify if this is what is being sought, or cross reference protection from other policies in the reasoned justification.
- 3 The policy does not require that the replacement dwelling be built on the same footprint as the previous building (this would be an exception for those buildings that are constrained from appropriate extension). This could result in buildings being removed and being relocated a significant distance from their original position. The policy does not provide any policy basis for resisting this.
- 4 The policy does not address the issue of curtilages. Similarly to point 3 above, under the policy the new dwelling could be relocated anywhere, which could result in significantly increase residential curtilages. The policy provides no policy basis to resist this.
- 5 The first paragraph of the Reasoned justification reads like policy and, arguably, sets out the parameters of the policy in more clarity than the policy does, as well as providing much needed definition on the issue of established lawful residential use. Consideration should be given to setting the policy out in the context of the first paragraph of the Reasoned Justification.

## MD10 - Tourism

## MD10 - Tourism

### Conclusion

|                    |    |    |   |    |     |    |   |     |   |    |    |   |   |   |
|--------------------|----|----|---|----|-----|----|---|-----|---|----|----|---|---|---|
| <b>Objectives</b>  | ++ | 1  | + | 5  | +/- | 1  | O | 5   | - | 3  | -- | 0 | ? | 0 |
| <b>All Results</b> | ++ | 15 | + | 45 | +/- | 15 | O | 141 | - | 21 | -- | 0 | ? | 0 |

The policy sets out the broad parameters for the location and development of tourism related facilities. The policy is a generic, overarching policy that addresses all tourism development, with a key element being rural diversification. It is this element of the policy that realises the significant number of positive/negative effects in the assessment. The policy seeks to focus tourism development within existing centres to promote accessibility, whilst rural diversification will be located away from settlements in potentially isolated areas. As a result there is an inherent tension within the policy in terms of sustainable location and loss of greenfield land, both of which are positive for existing centres, negative for rural diversification.

The policy realises a significant number of double positive effects, all directly relating to tourism factors, and a significant number of single positives across a much wider range of factors. By contrast the policy realises 21 single negative effects related primarily to climate change and protection of built and natural environment issues.

The policy has strong positives that more than outweigh the limited negative effects. Overall the policy is considered to be a positive one.

### Actions For Consideration

Notwithstanding the inherent conflict within the policy, which would be evident for any policy dealing with development both within and without existing settlements, the policy raises no issues for further consideration.

## MD11 – Employment Land And Premises

| Sustainability Objective / Aim  | Assessment Of Effects   |             |           | Level of Certainty |
|---|---|-------------|-----------|--------------------|
|   | Short Term  | Medium Term | Long Term |                    |
| <b>1 To provide the opportunity for people to meet their housing needs.</b> | ○   | ○           | ○         | H                  |

## MD11 – Employment Land And Premises

### Conclusion

|                    |      |      |       |       |      |      |     |
|--------------------|------|------|-------|-------|------|------|-----|
| <b>Objectives</b>  | ++ 1 | + 2  | +/- 0 | O 9   | - 2  | -- 1 | ? 0 |
| <b>All Results</b> | ++ 9 | + 27 | +/- 3 | O 174 | - 18 | -- 6 | ? 0 |

The policy sets out to protect allocated and existing employment sites for employment uses, affording more protection to the allocated sites than the existing sites. As such the policy is an economic development policy that would score highly positively on economic and some social factors, but would score highly negatively on environmental factors. This would be the same for any economic based policy. The assessment results reflect this position, with 9 double positive effects and 27 single negative effects based on employment, meeting users needs, reducing deprivation and the efficient and effective use of land, and 6 Double negative and 18 single negative effects based primarily on climate change, sustainable transport and waste management issues.

The policy also realises a high number of neutral effects that, in conjunction with the rough balance between the positive and negative effects, means that overall the policy is considered to be neutral.

### Actions For Consideration

The assessment raises no issues that require further consideration.

## MD12 – Gypsy And Traveller Accommodation

### Conclusion

|                    |    |   |   |    |     |    |   |     |   |    |    |   |   |   |
|--------------------|----|---|---|----|-----|----|---|-----|---|----|----|---|---|---|
| <b>Objectives</b>  | ++ | 0 | + | 4  | +/- | 2  | O | 6   | - | 3  | -- | 0 | ? | 0 |
| <b>All Results</b> | ++ | 6 | + | 42 | +/- | 24 | O | 129 | - | 33 | -- | 3 | ? | 0 |

The policy sets out the criteria for considering proposals for new Gypsy and Traveller development. Whilst expectation would be that such sites would normally be located outside settlement areas, the policy requires that proposals would be appropriately located for local services and community facilities, which offsets some of the expected negative effects of the policy. The policy realises 3 double negative effects and 33 single negative effects based primarily around issues of character/local distinctiveness; high quality development and protection of the natural environment.

Offsetting the negative effects are 6 double positives and 42 single positives based primarily on issues of provision of housing; meeting needs of users; causes of deprivation and sustainable location.

A significant number of positive/negative effects have been realised and these reflect the differing perceptions and circumstances surrounding the Gypsy/Traveller community and other communities. The positive/negative are primarily based around cultural heritage & protection of historic environment and archaeology, Community pride and spirit, Greenfield/Brownfield development, the efficient and effective use of land.

Overall the policy balances its positive and negative effects and is therefore considered to be neutral.

### Actions For Consideration

The assessment raises no issues that require further consideration.

## Recommendations for Change

- 1 Criterion 1 requires that the needs of the applicant cannot be met on the allocated site. This assumes that the applicant is a gypsy/traveller. It is more likely that landowners will bring forward proposals for others (possibly as part of land diversification) rather than individual or small groups of travellers seeking accommodation sites for themselves. In these cases the applicant does not have an accommodation need and the first criterion is meaningless. It might be better to reword the policy to reflect that the need for the accommodation cannot be met by the allocated site, rather than linking it to the applicant.
- 2 Criterion 3 also refers to the needs of the applicant. Again the applicant may not require the accommodation, but may be providing the facility for others. In this instance, given that Criterion 1 addresses the need for the accommodation, it might be appropriate to delete this part of the criterion.

## MD13 – Low Carbon And Renewable Energy Generation

### Conclusion

|                    |  |   |  |  |  |   |  |
|--------------------|--|---|--|--|--|---|--|
| <b>Objectives</b>  | <div style="background-color: #92d050; padding: 5px; display: inline-block;">++</div> 1  | <div style="background-color: #c1e1c1; padding: 5px; display: inline-block;">+</div> 3  | <div style="background-color: #d1c4e9; padding: 5px; display: inline-block;">+/-</div> 0 | <div style="background-color: #fff9c4; padding: 5px; display: inline-block;">O</div> 11  | <div style="background-color: #ffe0b2; padding: 5px; display: inline-block;">-</div> 0 | <div style="background-color: #ff0000; padding: 5px; display: inline-block;">--</div> 0 | <div style="border: 1px solid black; padding: 5px; display: inline-block;">?</div> 0 |
| <b>All Results</b> | <div style="background-color: #92d050; padding: 5px; display: inline-block;">++</div> 15 | <div style="background-color: #c1e1c1; padding: 5px; display: inline-block;">+</div> 45 | <div style="background-color: #d1c4e9; padding: 5px; display: inline-block;">+/-</div> 6 | <div style="background-color: #fff9c4; padding: 5px; display: inline-block;">O</div> 165 | <div style="background-color: #ffe0b2; padding: 5px; display: inline-block;">-</div> 3 | <div style="background-color: #ff0000; padding: 5px; display: inline-block;">--</div> 3 | <div style="border: 1px solid black; padding: 5px; display: inline-block;">?</div> 0 |

The policy sets out the proposals will only be permitted where there is “no adverse impact” on stated factors. All development has an adverse impact upon one or more of the stated factors (to a greater or lesser extent) and would not be permitted under this policy. For assessment purposes it has been assumed that the requirement is “no unacceptable impact” and the results reflect this position.

This policy sets out the policy framework for low carbon and renewable energy generation. The policy seeks to promote energy generation, which will have environmental, economic and social benefits. This is borne out by the assessment results that realise 15 double positive effects and 45 single positive effects across a range of factors. By contrast the assessment realised on one set of double negative effects and one set of single negative effects.

Overall the policy realises significant positive effects and therefore, the policy is considered to be positive.

### Actions For Consideration

A few issues were raised through assessment process that would benefit from further consideration, namely

- 1 The policy sets out a non-exhaustive list of energy generation methods covered by the policy. By including a specified list there is potential that methods not included on the list will be treated more negatively than those that are included. In order to ensure that all methods of low carbon and renewable energy generation are considered consistently and fairly, it would be better to omit the list from the policy text and, if appropriate, the various methods can be set out and considered in the reasoned justification.
- 2 The policy requires that proposals have no adverse impact upon a range of factors if they are to be permitted. Proposals for all forms of low carbon and renewable energy generation will have an adverse impact upon one or more of the factors. It would be better if the policy qualifies the level of adverse impact to introduce an element of flexibility, which could be realised by simply substituting the term “unacceptable impact” for “no adverse impact”

**MD13 – Low Carbon And Renewable Energy Generation**

- 
- 3 The policy does not address the issue of using mitigation to overcome adverse impacts. Its inclusion in the policy would provide a further element of flexibility.

## Consideration of Results

|                   |      |      |       |      |     |      |     |
|-------------------|------|------|-------|------|-----|------|-----|
| MD Objectives     | ++ 0 | + 5  | +/- 3 | O 6  | - 1 | -- 0 | ? 0 |
| MD Policy Results | ++ 0 | + 17 | +/- 5 | O 55 | - 2 | -- 0 | ? 0 |

The Managing Development policies set a policy framework for controlling development across the county borough. The policies are more detailed in nature than the Core Strategic Policies and are more likely to realise definitive effects as a result. It is usually the case that the more detailed the policy becomes the more negative the assessments are. However in this instance the assessments have realised a significant number of overall positive effects (17), with 3 objection sets (1 – Housing provision; 2 – provision of facilities; and 4 – reducing causes of deprivation) also being generally positive. The positive effects are spread across the spectrum of factors, which indicates that the policy framework, when implemented, should achieve improvements in sustainability across the county borough.

By contrast only 2 overall negative effects have been identified, relating to energy consumption and minimising waste and these are addressed below.

Further to this 5 positive/negative effects have been realised. These have occurred due to the increased level of definitive effects associated with more detailed policies. The positive/negative effects are not realised from the number of positive/negative effects, but from the increased significance of both the positive and negative effects and whilst they do cancel themselves out, it would be inappropriate to record the effects as neutral.

## Overall Negative Effects

### 6B *Reduce energy consumption (e.g. promote energy efficient building)* (- 2, - 4, [6 of 13])

The provision of development will inevitably lead to an increase in energy consumption. The Managing Development Policies set out the framework for controlling development across the county borough. It is a natural corollary for policies that promote development, as these policies quite rightly do, to increase overall energy consumption. Mitigation for this issue can only be delivered through very issue specific policies or allocations that directly address energy usage. It should also be noted that national guidance contains much of the policy framework addressing the issue. Consequently the negative effects realised for this

Objective are a natural result of policies that seek to promote development and it is unlikely that the plan could introduce mitigation into the policy framework without reiterating national policy.

**7 To Minimise Waste** ( - - 1, - 4, + / - 1 [7 of 11])

It would be natural for a development plan to realise negative effects from this Objective purely because it would be promoting development. The main issue with regard to this Objective is that whilst 1 double negative and 4 negative effects have been realised, no positive effects have been realised. This indicates that the policy framework is not providing any mitigation for the issue. However, the ability of the plan to address the issue should also be taken into account when considering the overall sustainability of the policy framework. New development will always give rise to increase waste generation (more people, more industrial processes, more retail packaging etc.) but it is almost impossible for a land use plan to mitigate against this. The plan can allocate facilities that can handle waste more sustainably, can seek to generate energy or reuse various forms of waste, but there is little a development plan can do to stop the generation of waste (which would be the requirement to mitigate against new development). Reuse of existing buildings is the most prominent way a plan can seek to reduce waste, but when considered in the context of the overall level of development it is insignificant.

Overall both negative effects are realised as a result of the primary role of the policy framework to promote development. In addition to this the policy framework is limited in its scope for mitigation by the restrictions of the development planning system. However, whilst the SEA/SA findings for these issues are negative, it is likely that mitigation will occur, albeit outside the remit of the development plan, and hence beyond the consideration of the SEA/SA assessment process. Therefore the SEA/SA assessment does not consider these two negative effects to present a significant issue for the sustainability of the plan overall.

## Overall Positive/Negative Effects

As outlined above the Positive/Negative effects are generally realised through increased significance and incidence of positive and negative effects for the respective Aims and Objectives, which stems from the increased detail in the Managing Development Policies.

**6 To minimise the causes and manage the effects of climate change.** ( ++ 2, + 5, - - 2, - 2, + / - 2)

The double positive effects are based on Policies MD3 - Design and MD13 – Renewable Energy Generation, and are backed up by positive effects that are also centred on environmental and social based policies. The double negative effects are based on policies MD7 – Affordable Housing in Rural Areas and MD8 – Conversion of rural buildings and these are backed up by negative effects from an employment policy. It is noticeable, therefore, that the positive and negative effects are derived from differing

types of policy. Environmental and social policies would be expected to score positively for this indicator, whilst economic policies would be expected to score negatively and assessment reflects this position.

In SEA/SA terms the positive/negative result for this Objective is on the positive side of what would normally be expected. Development Plans promote development and increased development will increase the causes of climate change, e.g. more people, more industry, more energy requirement. This result shows that the plan is addressing some, if not all of the issues associated with climate change. It should be noted the assessments revealed that the Policies were more successful in minimising the causes, rather than managing the effects of climate change, although this is not reflected in the results as the two factors are linked together. From a SEA/SA Assessment perspective a positive/negative result for this Objective is not considered to be an adverse result and does not warrant change to improve it.

**8** *To use land effectively and efficiently.* ( ++ 0, + 5, -- 0, - 4, +/- 1)

Whilst no double effects were recorded for this Objective, the number of single positive and negative effects recorded makes this a Positive/Negative rather than a neutral. The positive effects for this Objective are realised for policies that specifically address development locations (MD1, MD8, MD10, MD11, MD13), whilst the negative effects are realised on policies that deal with environmental protection and design or that address a landuse but has no spatial context (MD2, MD3, MD6, MD7). This would be expected as direct spatial reference in respect of development provides a focus and a way of managing land that would result in efficient and effective use of land.

In SEA/SA terms the Positive/Negative result for this Objective highlights contradictions within the policy set. Using land effectively and efficiently is a WG Objective and is also a plan Objective as well. Realising significant negative effects for this Objective implies that it will be difficult to realise this aim with the current policy set. It should be noted at this point that there is a common policy for all of the negative effects in all of the Objectives and Aims that have realised Positive/Negative results, namely Policy MD7 – Affordable Housing in Rural Areas. The Assessment of that policy has already highlighted that the approach seems to be “develop anything, anywhere “ as the policy lacks constraint or caveat. Whilst the policy facilitates affordable housing delivery the potential for adverse impacts from location of development, which is unconstrained, is significant. From a SEA/SA Assessment perspective a positive/negative result for this Objective raises the question of whether the plan can deliver its stated objective. It remains to be seen whether policies elsewhere in the policy framework will assist in its delivery.

**8A** *Retain greenfield land* ( ++ 1, + 1, -- 1, - 1, +/- 3)

This Aim realised a full house of negative and positive effects, as well as realising 3 positive/negative effects as well. The positive effects are realised from policy MD6 – Biodiversity and MD8 – Conversion of rural buildings. These realised positive effects because protecting biodiversity will naturally protect greenfield land and converting existing buildings restricts the requirements for

greenfield land. By contrast the negative effects are realised through MD7 – Affordable housing in rural areas and MD9 Replacement dwellings that both allow potentially unrestricted development onto greenfield land. The positive/negative effects are realised through policies that control the location of development, but also permit an element of development outside settlement limits (MD1, MD10, MD12). The SEA/SA findings for this aim identifies that the Managing Development Policies are a wide ranging policy set, addressing the important issues, whilst maintain necessary flexibility.

In SEA/SA terms a Positive/Negative result for this Aim reflects national guidance on the use of brownfield/greenfield land. Whilst national aims are to maximise brownfield land use, it also acknowledges that it will be necessary for some development to locate on greenfield sites. In preparing the LDP the local planning authority were faced with an existing situation, e.g. unsustainable settlements, the dominance of the car in trips. This means that the aim of the LDP must be to make the existing situation more sustainable, rather than seeking truly sustainable development, which would be undeliverable. The SEA/SA process seeks to introduce environmental (and sustainability) factors into the decision-making processes of the LDP and will therefore seek to move the existing situation towards a more positive result. This Positive/Negative result for this Aim reflects a move towards the positive as both the positive and negative effects, whilst significant, are balanced. The Assessment result does not reflect the respective levels of greenfield and brownfield development within the plan, but indicates what the policy framework would achieve when implemented. Given this the Aim is not considered to be an adverse result and does not warrant change to improve it.

**8B** *Bring previously developed land in sustainable locations back into use* ( ++ 2, + 1, - - 1, - 1, +/- 1)

This aim again realises a full house of effects. The double positive effects from policies MD1 and MD11, both of which promote reuse of buildings and derelict/brownfield land. The single positive effect was realised through policy MD8 that addresses conversion/adaptation of existing rural buildings. By contrast the double negative effect was realised from Policy MD7 – Affordable Housing in Rural Areas, which adopts a develop anything anywhere approach, and the single negative from Policy MD9 – replacement dwellings, which allows the re-siting of buildings without regard to the original location.

In SEA/SA term this Aim is the mirror image of the previous Aim (8A) addressed above. Consequently the same issues and considerations apply. Therefore the aim is not considered to be an adverse result and does not warrant change to improve it.

**12** *To reduce the need to travel and enable the use of more sustainable modes of transport.* ( ++ 0, + 4, - - 1, - 3, +/- 1)

The positive results for this Objective are realised through Policies MD2, MD3 and MD4, which all make provision for pedestrian, cycle and public transport modes of transport, as well as MD12 – Gypsy and Traveller Accommodation, which realises positives from Gypsy's/Travellers becoming static, rather than continually moving around. The double negative effects are realised from policy MD7 – Affordable Housing in Rural Areas, whilst the single positives are realised through MD8, MD10, MD11 which all address development that may not be located in sustainable locations.

---

It should be noted that the ability of the LDP to influence “the need to travel” is extremely limited (if it can do it at all). Even allocating mixed-use development requires those living in the dwellings to walk to their place of work, requiring a “trip”, albeit on foot. Added to this the LDP is required to provide housing, employment, retail and community/leisure development, meaning the LDP provides both origins and destinations for trips which would undoubtedly increase the need to travel. Consequently the only positive effects that could be realised for this Objective relate to enabling the use of sustainable modes of transport. This is reflected in the results in that no double positive effects were realised

In SEA/SA terms the results reflect a balance between positive and negative effects which, considering that a double positive could not have been realised, represents a significantly positive overall position. Given this it is not considered to be an adverse result and does not warrant change to improve it.

Given the wide ranging issues that the policy set must address and the potential conflicts between the needs of differing landuse types, it is not unexpected to find mixed results within the assessments. The Positive/Negative effects realised from the assessments reflects the conflicts inherent in landuse planning and as such they are not considered to raise issues in respect of the SEA/SA that need to be addressed through the LDP policies.

## **Conclusion**

The Managing Development Policies realise a very high level of positive effects (15), whilst only realising 2 negative effects, which themselves are down to the role of the plan in promoting development. Given the positive effects far outweigh the negative effects and that the Positive/Negative results do not raise issues for the SEA/SA, it can only be concluded that the Managing Development Policy set will realise significant positive effects.

## Managing Development Policies Assessment Overview

|--------------------|----|---|---|----|-----|---|---|-----|---|----|----|---|---|----|
| <b>Objectives</b>  | ++ | 1 | + | 2  | +/- | 1 | O | 8   | - | 2  | -- | 1 | ? | 0  |
| <b>All Results</b> | ++ | 9 | + | 18 | +/- | 8 | O | 155 | - | 27 | -- | 7 | ? | 13 |

The policy sets out how the housing requirement for the plan is to be met, identifying how much development will take place on allocations, and how much will take place on sites not allocated in the plan, windfall sites. Windfall sites, because they could occur anywhere, raise the potential for adverse impacts, whilst allocated sites have been subject of assessment that includes consideration of the sustainability level of their location. This is reflected in the assessment results with 9 double positive effects, relating to housing provision, and 18 single positives, primarily relating to meeting community needs and addressing deprivation. It should be noted that 3 of the single positives are not realised as a set, but as individual results for the short-term period, with the medium-term and long-term periods realising different effects. These single responses relate to brownfield land development and regeneration programmes, which reflect that the Barry Waterfront development is identified to progress in the short-term period. Following on from this the proposed development will utilise an increase amount of greenfield development, which gives rise to the differential results.

The double negative effects are all realised in the climate change Objective Set. The policy sets out how housing requirements will be met and so promotes development, which naturally increases the causes of climate change. As the policy only addresses housing delivery it contains no protectionist policy content that could offset the negative effects. Consequently significantly negative effects would always be realised for such a policy. It should be noted that for 2 of the double negative effects sets the short-term effect is a single negative, reflecting the level of brownfield development that will take place as part of the Barry Waterfront Development. Other single negative effects have been realised for sustainable transport, protection of natural environment and greenfield land and minimising waste factors. These single negatives relate to the greenfield development sites and windfall development that could have significant potential adverse impact upon the environment.

The assessment raised a number of unclear effects and these are realised through factors that are dependent upon a site location to be evaluated. This is not a significant issue with the policy, rather the policy sets out development whose location is not broadly defined (Windfall sites) and this gives rise to unclear effects due to site specific details.

Whilst the policy realises significant positive and negative results from differing sources, they are in rough balance with each other and overall the policy would be considered to be Positive/Negative. However, policies within other policy sets, e.g. MD1 – Location of

## MG 1 - Housing Supply In The Vale Glamorgan

---

Development, provide a framework that is likely to limit the significance of the negative effects. Consequently the policy is considered to be neutral overall.

### **Actions For Consideration**

The assessment raises no issues that would benefit from further consideration.

## MG 2 - Housing Allocations

### Conclusion

|             |      |      |        |       |      |      |      |
|-------------|------|------|--------|-------|------|------|------|
| Objectives  | ++ 1 | + 3  | +/- 1  | O 7   | - 2  | -- 1 | ? 0  |
| All Results | ++ 9 | + 22 | +/- 12 | O 147 | - 24 | -- 9 | ? 14 |

The policy sets out the housing allocations for the plan period. The policy is promoting development and, as such, would be expected to realise significant positives for economic and social factors, but significant negatives for environmental factors and would be likely to realise an element of uncertain or unclear effects that may be skewed by locational factors. The assessment of the policy realises this pattern of effects. Significant positives are realised for housing provision factors and single positives are realised for community needs, reducing deprivation and efficient and effective use of land. On the other hand significant negatives are realised for climate change factors and single negatives are realised for loss of greenfield/green space, sustainable transport, minimising waste and knock-on effects for biodiversity and flooding.

The issue of brownfield development raises unclear effects, although the short term period realises positives. This relates to the fact that Barry Waterfront, which includes significant brownfield development, is programmed to occur through the first 5 years of the plan period, hence the positive effects, then the remainder of the allocations, which have not been identified as greenfield or brownfield, will be developed over the remaining 10 years resulting in uncertain effects which will reflect the circumstances of each site. Other unclear effects are realised for protecting agricultural land and flood risk issues for the whole plan period.

Overall the positive and negative effects balance each other out and, combined with a significant level of neutral effects, the policy is considered to be neutral.

### Actions For Consideration

The assessment raises one issue that should be considered:

- 1 The assessment process uses the precautionary approach and takes a worst case scenario of effect where they are unclear. Increased certainty for this policy, through identifying whether the allocations are greenfield or brownfield, would be likely to realise more positive effects. Further consideration should be given to providing annotation on whether the site is Greenfield or brownfield.

### Conclusion

|                    |              |             |              |             |             |             |            |
|--------------------|--------------|-------------|--------------|-------------|-------------|-------------|------------|
| <b>Objectives</b>  | <b>++</b> 4  | <b>+</b> 8  | <b>+/-</b> 1 | <b>O</b> 0  | <b>-</b> 2  | <b>--</b> 0 | <b>?</b> 0 |
| <b>All Results</b> | <b>++</b> 45 | <b>+</b> 90 | <b>+/-</b> 3 | <b>O</b> 78 | <b>-</b> 18 | <b>--</b> 0 | <b>?</b> 3 |

This policy sets out the proposed mixed-use development for the Barry Waterfront, with the Reasoned Justification setting out the details and background in brief. The proposed development is largely on previously developed land and seeks to reuse existing buildings where appropriate. Increased policy detail would normally be expected to realise a high number of defined effects, which would also be expected to be more negative. Whilst the assessment did realise a very high level of defined effects (66%), it also, unusually, realised an extremely high level of positive effects and a very small number of negative effects.

A total of 45 double positive effects were realised from a wide range of factors and these are backed up by 90 single positive effects. Only 18 negative effects were realised and these were based on climate change and waste minimisation factors, which would only be expected from a policy that promotes new development, but it is noticeable that only single negative effects were realised. The negative effects are softened by positives for sustainable locations and transport, brownfield development (secondary effects for protecting greenfield land) and for reuse of existing buildings.

Overall the assessment can only be considered to be highly positive, realising significant sustainability benefits

### Actions For Consideration

The assessment raised not issues that would benefit from further consideration.

|--------------------|----------------|----------------|------------------|-----------------|----------------|-----------------|---------------|
| <b>Objectives</b>  | <b>++</b><br>2 | <b>+</b><br>2  | <b>+/-</b><br>1  | <b>O</b><br>4   | <b>-</b><br>3  | <b>--</b><br>3  | <b>?</b><br>0 |
| <b>All Results</b> | <b>++</b><br>9 | <b>+</b><br>24 | <b>+/-</b><br>12 | <b>O</b><br>111 | <b>-</b><br>51 | <b>--</b><br>30 | <b>?</b><br>0 |

The assessment assumes 170Ha of employment land and 450 dwellings from allocation lists. The policy sets out the development proposals for the St Athan Strategic Opportunity Area, originally identified in the Wales Spatial Plan. The development proposals include residential development, employment development based on the existing aerospace industry and associated facilities.

The assessment realises high numbers of negative effects, with 30 double negative effects based largely on sustainable transport, protection of the natural environment and climate change factors, and 51 negative effects across a wide range of factors. The high level of negative effects are a result of a high level of development being located in and around a small scale settlement that is not served by high levels of public transport and the consequential use of a significant amount of greenfield land. The reasoned justification identifies that the sites will be constrained by local biodiversity and heritage issues but these can be mitigated so as not to preclude development and the assessment consequently realises negative effect for heritage and biodiversity issues.

Double positives are realised for the provision of housing and employment, which is the purpose of the policy, and single negatives based primarily on reducing deprivation, meeting user needs and providing facilities and it should be noted that the assessment identified positive effects for the efficient and effective use of land.

Positive/Negative effects have also been realised, based on community perception factors (community spirit, crime user needs). This reflect the potential difference of perception from existing resident and the new resident population engendered by the development.

Overall the policy will have overriding negative effects associated with developing a significant level of development on greenfield land in a less than sustainable location. The assessment can only conclude that this policy is negative.

### Actions For Consideration

The assessment raised one issue that would benefit from further consideration, namely

**MG 4 – Strategic Site At St Athan Strategic Opportunity Area**

- 1 The Reasoned Justification identifies potential impacts upon local biodiversity and heritage factors but states that they can be mitigate so as to not preclude development. Other policies in the policy framework set out a no net loss, or even a net gain, requirement where adverse impacts are identified. The Reasoned Justification for this policy could be amended to reflect the other policies in the policy framework and this would realise a more positive assessment.

## MG 5 – Affordable Housing

| <b>All Results</b> | <b>++</b> 15 | <b>+</b> 21 | <b>+/-</b> 18 | <b>O</b> 153 | <b>-</b> 24 | <b>--</b> 6 | <b>?</b> 0 |

The policy sets out the affordable housing requirements to be delivered from housing sites, including the LDP housing allocations. Given that the targets will be applied to all residential sites (over 5 units) there is an issue of the spatial distribution of the housing units. It is likely, however, that the majority of affordable housing will be delivered through the allocated sites, although the plan does assume 25% of the total housing requirements will be provided by unallocated windfall sites. The assessment has assumed that the significant majority of affordable housing will reflect the spatial distribution of the housing allocations, and the assessment results have been determined on that basis.

As an allocation it would be expected that there would be tension between economic factors (the benefits derived from the allocations) and environmental factors (environmental impacts of new build) and this policy is not different. The assessment realises 15 double negatives and 21 single negatives whilst it also realises 6 double positives and 24 single negatives as well. Whilst the assessment realises more double positives than negatives, in overall terms the difference is insignificant and the assessment is broadly neutral.

The assessment also realises 18 Positive/Negative effects. These are realised for protectionist factors (heritage, culture and natural environment) and for factors relating to sustainable locations. These reflect the differing locations of housing allocations, some being favourably located, others not, hence the Positive/Negative results.

Overall the policy is balanced in effects and is considered to be neutral.

### Actions For Consideration

The assessment raises no issues that would benefit from further consideration.

## MG 6 – Residential Development In Key, Service Centre And Primary Settlements

| Sustainability Objective / Aim   | Assessment Of Effects                     |             |           | Level of Certainty |

## MG 6 – Residential Development In Key, Service Centre And Primary Settlements

### Conclusion

|                    |              |             |              |              |             |             |            |
|--------------------|--------------|-------------|--------------|--------------|-------------|-------------|------------|
| <b>Objectives</b>  | <b>++</b> 2  | <b>+</b> 5  | <b>+/-</b> 0 | <b>O</b> 5   | <b>-</b> 3  | <b>--</b> 0 | <b>?</b> 0 |
| <b>All Results</b> | <b>++</b> 24 | <b>+</b> 57 | <b>+/-</b> 0 | <b>O</b> 126 | <b>-</b> 30 | <b>--</b> 0 | <b>?</b> 0 |

The policy defines settlement boundaries and sets out the policy framework for considering development within the identified settlement boundaries of Key Centres, Service Centres and Primary Settlements. Settlement boundaries are an important tool for controlling development and promoting development in the most appropriate areas. In SEA/SA assessment terms such a policy is likely to receive strong positive effects for protecting land, promoting brownfield development and protecting and/or enhancing both urban and natural environments, including their culture and heritage. This is a result of the fact that development within and existing settlement is more likely to have less environmental impacts than developments that take place outside existing settlements (although on an individual site basis this may not be the case). This is the case with this policy which has realised 24 double positive effects. In addition to this the assessment realised 57 single positive effects across a broad range of economic, social and environmental factors.

By contrast the policy realises 30 single negative effects, partly reflecting locational factors, e.g. out-of-town retailing, sustainable transport, protecting employment sites, whilst the others are related to the fact that the policy is promoting development so climate change and waste minimisation are both negative.

It is considered that the policy is relatively clear as no Unclear or Positive/Negative effects have been realised.

Given that two-fifths of all effects were positive and that the number of negatives were so low, it can only be concluded that this policy is positive in effect.

### Actions For Consideration

One issue was raised through the assessment that may benefit from further consideration

- 1 The hierarchy of settlements has been defined by the particular roles and functions that each settlement play in the overall picture. However, the policy makes no reference to this important factor. Consideration should be given to amending the policy to include a requirement for development to accord with the role and function of the settlement within which it is located

## Comments On The Policy

- 1 The Policy only permits development where it makes efficient use of previously developed land whilst the reasoned justification only seeks to promote it. The policy and reasoned justification should reflect the same policy requirement otherwise it raises contradictions which could undermine the policy.
- 2 Criterion 4 seeks to protect open space, and community and tourism buildings. However this could be in conflict with the requirements of Criterion 1, which seeks the efficient use of previously developed land. The policy should be reworded to either prioritise the Criteria of to address how such conflict will be managed.
- 3 The second paragraph raises the issue of the affordable housing exceptions policy, which is not set out as part of this policy. Given this policy addresses development within settlement limits, it seems unnecessary to include the reference which causes confusion.
- 4 No mention is made in the policy to development needing to support the role and function of the settlement within which it is located. This would seem to be an important omission as the hierarchy of settlements is based upon that very principle.

## MG 7 – Residential Development Within Minor Rural Settlements

### Conclusion

|                    |    |   |   |    |     |    |   |     |   |    |    |    |   |   |
|--------------------|----|---|---|----|-----|----|---|-----|---|----|----|----|---|---|
| <b>Objectives</b>  | ++ | 1 | + | 2  | +/- | 4  | O | 4   | - | 0  | -- | 4  | ? | 0 |
| <b>All Results</b> | ++ | 9 | + | 24 | +/- | 15 | O | 108 | - | 39 | -- | 36 | ? | 6 |

The policy sets out the policy framework for considering residential development in minor rural settlements in the settlement hierarchy. However, critical to the findings of the SEA/SA assessment, the policy does not define settlement boundaries for the settlements. In the absence of a defined settlement boundary for the settlements the criteria of the policy become subject to interpretation, which weakens the policy. In SEA/SA terms considering effects of development contained by settlement boundaries is more positive and convincing than purely by policy wording. As a result the policy introduces flexibility into potential locations for development and, linked to the fact that minor rural settlements are not sustainable transport hubs and are likely to have limited public transport, the uncertainty over the potential location of development will realise more negative results.

The assessment realised a very high number (36) of double negative effects relating to sustainable transport, protecting the natural environment, the efficient and effective use of land, waste minimisation and climate change factors. Whilst a policy promoting development is likely to realise negative effects for climate change and waste minimisation, the other double negative effects are realised from the uncertainty over development location. In addition to this 39 negative effects have been realised across a broad range of factors, but the key single negatives are those relating to the fact that the small scale development permitted by this policy is unlikely to have the potential to provide and services or facilities that may be required as part of the development.

The assessment realised 9 double positive effects, all related to the provision of housing, and 24 single positives based primarily on design quality and protection of the built environment.

The assessment for this policy can only consider the policy to be significantly negative in effect. The only mitigating consideration for this policy is that the majority of residential development is expected to be on allocated sites, which are not included in the scope of this policy, although 25% of development is the total housing requirement is expected to be delivered from windfall sites, which the policy does cover. Even given the limited scope of the policy the negative effects realised for the policy can only lead to the conclusion that the policy is negative overall.

## MG 7 – Residential Development Within Minor Rural Settlements

---

### **Actions For Consideration**

The Assessment raises some issues that would benefit from further consideration

- 1 In the absence of defined settlement boundaries the policy needs to be worded very definitively and strongly to avoid potential difference in interpretation and to provide certainty. The Criteria are not written in a definitive manner and, as a result, introduces flexibility that could lead to significant negative environmental impacts. Rewording the criteria to be specific and definitive would remove much of this potentially harmful flexibility.

This policy addresses the issue of the density that is being sought for housing development throughout the county borough. The policy sets out minimum densities of 30 dwellings per hectare for in Key, Service Centre and Primary settlements and 25 per hectare for minor rural settlements. A nominal average density for residential development would normally be expected to be 35 per hectare. The reasoned justification does not include any information that sets out why lower densities have been selected for this policy. In the absence of this information the assessment would normally be expected to view the targets as seeking a less than high density for residential development. However, it is acknowledged that purpose of including this policy is to seek higher density developments than has previously been realised. Whilst the normal approach toward assessment is to take the precautionary and more negative approach in considering unknown policy elements, in this case the assessment has erred on the side of the principle of the policy. This realises a significantly more positive assessment result than would have been realised on a literal assessment.

**Therefore, it should be noted that the assessment results reflect the intention to seek higher densities than have been realised previously. If this is not the case, then the assessment would need to be undertaken again to reflect this.**

Whilst the issue of density is a critical consideration in land provision for residential development, in general policy terms density is a detailed design and layout matter. As such a policy relating to density would be unlikely to record many definitive effects when considered against the SEA/SA assessment framework. The assessment of this policy reflects this, with a total of 9 positive effects and 6 negative effects representing only 6% of the total number of assessed effects. Given this the identified positive and negative effects can only be considered to be insignificant in respect of the overall assessment and therefore the policy is considered to be neutral overall.

### Actions For Consideration

The policy raises the following issue that would benefit from further consideration:

- 1 The policy sets out the development density for residential development, but does not set out the background context of why the figures of 30 and 25 dwellings per hectare have been chosen. A nominal average density for residential development is generally

## MG 8 – Housing Densities

---

accepted at 35 dwellings per hectare and, given that it is a government aim, and a SEA/SA aim in the assessment framework, to seek higher density development, the policy would benefit from the inclusion of background information explaining why the targets set represent high density development.

## MG 9 – Gypsy And Traveller Site

### Conclusion

|                    |    |   |   |    |     |    |   |     |   |    |    |   |   |   |
|--------------------|----|---|---|----|-----|----|---|-----|---|----|----|---|---|---|
| <b>Objectives</b>  | ++ | 0 | + | 3  | +/- | 1  | O | 7   | - | 3  | -- | 0 | ? | 1 |
| <b>All Results</b> | ++ | 0 | + | 27 | +/- | 12 | O | 144 | - | 42 | -- | 9 | ? | 3 |

The policy allocates a Gypsy and Traveller site to accommodate 6 authorised pitches and 15 transit pitches. The assessment of the policy realises 9 double negative effects relating to sustainable location and energy efficiency and 42 single negatives from a range of economic, social and environmental factors. Conversely the policy realises 24 single positive effects relating to provision of housing, provision of facilities and reducing deprivation.

Key findings in the assessment of this policy relate to the climate change, waste minimisation and sustainable transport Objective sets. Any policy promoting development, as this policy does, would normally be expected to realise significant negatives for climate change and waste minimisation in an assessment. However this policy realises only two single negative and one double negative out of seven factors for climate change and only one single negative out of four factors for waste minimisation. These results, which are significantly less negative than would normally be expected have been minimised by reduced transport factors. However it should be noted that, due to the location of the site, the assessment realises significant negative effects for sustainable transport – with 2 single negative and one double negative effects from 5 factors.

Despite the generally negative balance of the results and the fact that strong negative effects are realised against sustainable transport, which would normally be significant issues for any assessment, the proposed development amounts to 9 permanent dwelling pitches and 15 transit pitches for stop-overs. This level of development is very minimal and, despite the negative effects, in the overall picture the policy has to be considered to be neutral in effect.

### Actions For Consideration

The assessment raised no issues that would benefit from further consideration.

## MG10 – Provision of Education Facilities

## MG 12 - Employment Allocations

### Conclusion

|                    |           |   |          |    |            |    |          |     |          |    |           |    |          |   |
|--------------------|-----------|---|----------|----|------------|----|----------|-----|----------|----|-----------|----|----------|---|
| <b>Objectives</b>  | <b>++</b> | 1 | <b>+</b> | 2  | <b>+/-</b> | 2  | <b>O</b> | 7   | <b>-</b> | 0  | <b>--</b> | 3  | <b>?</b> | 0 |
| <b>All Results</b> | <b>++</b> | 9 | <b>+</b> | 18 | <b>+/-</b> | 15 | <b>O</b> | 141 | <b>-</b> | 36 | <b>--</b> | 18 | <b>?</b> | 0 |

The policy sets out the employment sites to meet the employment land requirement for the plan period. Employment land uses are significant destinations for trips and the development of new employment land gives rise to an increase in the need to travel (specifically travel to work). In addition not all of the employment sites are located at public transport hubs, accessible to a range of modes of travel. Consequently the assessment realises double negative effects for need to travel, sustainable transport/location factors and climate change factors. Single negative effects are also realised for protection of the natural environment, cultural and heritage factors reflecting that both the allocations include a significant amount of greenfield land.

On the positive side 9 double negative effects were realised for provision of employment opportunities and 18 single positive for reducing deprivation, meeting user needs and using brownfield land, predominantly associated with the Barry Waterfront development.

15 Positive/Negative effects were also realised for factors that included two elements, with one of the elements being sustainable location or protection of the natural environment.

Overall the assessment reflects what would normally be expected from a policy that promotes development. The negative effects are twice the level of the positive effects, although the majority of the effects are neutral in nature. On balance the higher number of negative effects does not outweigh the overall neutral nature of the assessment and the policy is considered to be neutral overall.

### Actions For Consideration

The assessment raised no issues that would benefit from being considered further.

### Conclusion

|             |       |      |       |       |      |       |     |
|-------------|-------|------|-------|-------|------|-------|-----|
| Objectives  | ++ 1  | + 3  | +/- 0 | O 7   | - 0  | -- 4  | ? 0 |
| All Results | ++ 15 | + 24 | +/- 5 | O 139 | - 30 | -- 23 | ? 0 |

### Actions For Consideration

It is assumed that the rail link serves the airport, rather than employment allocations and that the link will be provided by the end of the medium term. Therefore benefits of the link will be realised in the long term period of assessment.

## MG 16 – Retail Allocations

### Conclusion

|                    |      |      |       |       |     |      |     |
|--------------------|------|------|-------|-------|-----|------|-----|
| <b>Objectives</b>  | ++ 0 | + 7  | +/- 2 | O 5   | - 1 | -- 0 | ? 0 |
| <b>All Results</b> | ++ 6 | + 66 | +/- 9 | O 144 | - 9 | -- 0 | ? 3 |

The policy sets out the two retail allocations that have been identified to strengthen the retail role of the Barry and Cowbridge settlements. Only two sites have been identified, a large allocation at Barry Waterfront and a Strategic convenience retail site for a foodstore and associated convenience units. The settlements are accessible by a range of transport modes and are, therefore, considered to be sustainable locations. In addition to this the intention of the policy is to reinforce the existing roles of the settlements which also assist in their sustainability. To reflect this, the assessment realised only 9 single negative effects relating to waste and energy consumption. By contrast the assessment realised 6 double positive effects and 66 single positive effects across a range of economic, social and environmental factors.

The overwhelming number of positive effects, compared to the number of negative effects, tips the balance of this policy towards positive and it is considered that the policy, overall, is positive in nature.

### Actions For Consideration

The assessment raised no issues that would benefit from further consideration.

## Comments On The Policy

- 1 The reasoned justification to the policy states that the details of the retail allocation at Barry Waterfront are set out in Policy MGXX (presumably MG3). However, the reasoned justification for policy MG3 identifies only that “*The proposed development will include . . . . . retail (A1), cafes bars and restaurants (A3)*” Given that the Cowbridge allocation is set out in quite a lot of detail, the retail proposals for Barry Waterfront would also benefit from being set out in as much detail, although it would realise more SEA/SA benefit if included in this policy reasoned justification, rather than the reasoned justification for policy MG3.

| <b>All Results</b> | <div style="background-color: #92d050; padding: 5px; border: 1px solid black;">++</div> 0 | <div style="background-color: #90ee90; padding: 5px; border: 1px solid black;">+</div> 0 | <div style="background-color: #9370db; padding: 5px; border: 1px solid black;">+/-</div> 0 | <div style="background-color: #ffff00; padding: 5px; border: 1px solid black;">O</div> 237 | <div style="background-color: #ffcc99; padding: 5px; border: 1px solid black;">-</div> 0 | <div style="background-color: #ff0000; padding: 5px; border: 1px solid black;">--</div> 0 | <div style="background-color: #ffffff; padding: 5px; border: 1px solid black;">?</div> 0 |

This policy sets out the retail hierarchy for the county borough.

**This policy is an administrative action that contains no policy content.** As such the policy is not assessable,

The result for each Objective and aim should read “no effect to measure”. However the scoring regime for the assessments does not contain a notation to reflect this. The assessment has used the neutral effect notation but this should be interpreted to mean “no effect to measure” in every instance.

### Actions For Consideration

The assessment raises one issue that would benefit from further consideration:

- 1 The policy is an administrative action without any policy content. The policy context for the retail hierarchy is contained in the subsequent policy MG13 and MG14 and consideration should be given to the deletion of this policy and the incorporation of the retail hierarchy into the subsequent 2 policies.

## MG18 – Non A1 Retail Uses Within Town and District Retail Centres

| Sustainability Objective / Aim  | Assessment Of Effects                     |             |           | Level of Certainty |

## MG18 – Non A1 Retail Uses Within Town and District Retail Centres

### Conclusion

|                    |              |             |               |              |             |             |            |
|--------------------|--------------|-------------|---------------|--------------|-------------|-------------|------------|
| <b>Objectives</b>  | <b>++</b> 2  | <b>+</b> 6  | <b>+/-</b> 2  | <b>O</b> 4   | <b>-</b> 1  | <b>--</b> 0 | <b>?</b> 0 |
| <b>All Results</b> | <b>++</b> 12 | <b>+</b> 54 | <b>+/-</b> 12 | <b>O</b> 147 | <b>-</b> 12 | <b>--</b> 0 | <b>?</b> 0 |

The policy sets out the landuse restrictions for the designated Town and District Retail Centres. As the policy restricts potential landuses it is likely that the assessment would realise negative effects as a result. The assessment realises 12 single negatives relating to provision of housing, range of uses in retail centres and evening economy factors. This mirrors the anticipated findings.

By contrast the policy realises 12 double positive effects, based on retail provision, effective and efficient use of land and accessibility factors. In addition 54 single negatives have been realised based on quality design, protection of built environment/heritage and culture, deprivation, community spirit and provision of facilities. These stem from the effects of the policy that seek to assist regeneration of the central areas and protecting the urban fabric as well as promoting the role and functions of these settlements.

Whilst the policy does realise a relatively high number of positive effects when compared to the negative, meaning the policy comes out more positively on balance, it is not sufficient to make the policy positive overall, primarily due to the lower number of double positive effects. As a result it is considered that the policy is neutral overall.

### Actions For Consideration

The assessment raised no issues that would benefit from further discussion.

## Comments On The Policy

- 1 Criterion 3 makes reference to an “*over concentration*” of non A1 retail uses in town and district centres. However the term is not defined in the policy or reasoned justification and therefore the term is unclear and ambiguous. The policy would benefit from amendment to provide more certainty over what is meant by “*over concentration*”.

## MG 19 – Non Retail Uses Within Local & Neighbourhood Shopping Centres

### Conclusion

|                    |      |      |       |       |     |      |     |
|--------------------|------|------|-------|-------|-----|------|-----|
| <b>Objectives</b>  | ++ 2 | + 5  | +/- 0 | O 8   | - 0 | -- 0 | ? 0 |
| <b>All Results</b> | ++ 6 | + 39 | +/- 9 | O 180 | - 3 | -- 0 | ? 0 |

The policy sets out the landuse restrictions for the designated Local and Neighbourhood Centres. As the policy restricts potential landuses it is likely that the assessment would realise some negative effects as a result. The assessment realises just 3 single negative effects relating to protection of employment sites and no double negative effects.

By contrast the policy realises 6 double positive effects relating to retail provision and the effective and efficient use of land. In addition 39 single negatives have been realised, based largely on deprivation and the provision of facilities.

Whilst the policy does realise a higher number of positive effects when compared to the number of negative effects, meaning the policy comes out more positively on balance, it is not sufficient to make the policy positive overall. As a result it is considered that the policy is neutral overall.

### Actions For Consideration

There are two issues that the assessment has raised that would benefit from further consideration, namely:

- 1 The policy contains two policy statements, one that relates to Local Centres and one that relates to Neighbourhood Centres, with differing policy content. Given that the policy sets out different policy requirements for the different types of centre, the policy framework may benefit from splitting the two policy elements into separate policies, which could provide more clarity.
- 2 The policy makes reference to an “*over concentration*” of non A1 retail uses in local retail centres. However the term is not defined in the policy or reasoned justification and therefore the term is unclear and ambiguous. The policy would benefit from amendment to provide more certainty over what is meant by “*over concentration*”.
- 3 The policy also makes reference to neighbourhood centres and “*other retail areas*”. The retail hierarchy set out as Policy MG12 sets out Local Centres and Neighbourhood Centres and it is assumed they have a defined area. However the hierarchy makes no

## MG 19 – Non Retail Uses Within Local & Neighbourhood Shopping Centres

---

reference to “other retail areas” and, as such, it is assumed that they do not have identified boundaries. The policy would benefit from clarification what “other retail areas” are, where they stand in the hierarchy and how the policy is to be applied to them.

### Conclusion

|                    |    |    |   |    |     |   |   |     |   |    |    |   |   |   |
|--------------------|----|----|---|----|-----|---|---|-----|---|----|----|---|---|---|
| <b>Objectives</b>  | ++ | 2  | + | 3  | +/- | 1 | O | 8   | - | 1  | -- | 0 | ? | 0 |
| <b>All Results</b> | ++ | 12 | + | 57 | +/- | 9 | O | 147 | - | 12 | -- | 0 | ? | 0 |

This policy sets out the transport proposals that aim to make more efficient use of existing infrastructure and promote sustainable, transport. The proposals include a range of proposals covering walking, cycling, public transport and highway improvements. The assessment of the policy realises quite positive effects with 12 double positive effects relating to accessibility, providing effective infrastructure and providing facilities, and also realised 57 single positive effects across a range of economic, social and environmental factors. By contrast the assessment realised only 12 single negative effects all relating to the potential loss of greenfield land associated with highways and cycle provision.

An assessment of transport policy would normally be expected to realise a higher level of negative effects relating to climate change and greenfield factors. However the proposals set out in the policy are specifically linked to other development promoted through the plan and contributes towards their sustainable transport provision. As a result the close relationship between proposed development and transport proposals reduces the potential negative effects.

Overall, despite realising a high number of positive effects, they are not significant enough to tip the balance to a positive policy. Consequently the policy is considered to be positive overall.

### Actions For Consideration

The assessment raises no issues that would benefit from further consideration.

## MG 21 – Special Landscape Areas

| Sustainability Objective / Aim  | Assessment Of Effects  |             |           | Level of Certainty |

| <b>All Results</b> | <span style="background-color: #92d050; color: white; padding: 2px;">++</span> 3 | <span style="background-color: #90ee90; color: white; padding: 2px;">+</span> 36 | <span style="background-color: #ccccff; color: white; padding: 2px;">+/-</span> 0 | <span style="background-color: #ffff00; color: black; padding: 2px;">O</span> 195 | <span style="background-color: #ffcc99; color: black; padding: 2px;">-</span> 3 | <span style="background-color: #ff0000; color: white; padding: 2px;">--</span> 0 | <span style="border: 1px solid black; padding: 2px;">?</span> 0 |

The first paragraph of the policy, as submitted for assessment, was unclear as it did not set out what proposed development was expected to do. For assessment purposes it has been assumed that the policy seeks to protect the special qualities of the designated Special Landscape Areas (SLA).

This policy allocates SLAs and sets out the policy framework for their protection. Normally protection policies would realise significant positives for the protection elements of the policies, but would also realise negatives from the restrictions they place upon potential development options. However, SLAs are slightly different from normal protectionist policies as they are more like a design policy than a protection policy because an SLA designation does not seek to preclude development, only ensure it is designed to such a standard to ensure the protection of the important elements of the SLA. This small difference manifests a large difference when subject to SEA/SA assessment.

The assessment realises only one set (3) of single negative effects relating to renewable energy generation. This would be expected as landscape issues are a significant factor in determining renewable energy proposals and a major reason for them being refused. No double negative effects have been realised.

In contrast 3 double positive effects have been realised relating to the protection of natural assets. In addition 36 single positive effects have been realised based largely around the protection of culture and heritage, the efficient and effective use of land and the protection of the built and natural environment.

Whilst the policy does realise a higher number of positive effects when compared to the number of negative effects, meaning the policy comes out more positively on balance, it is not sufficient to make the policy positive overall due to the very high level of neutral effects realised as part of the assessment. As a result it is considered that the policy is neutral overall.

### Actions For Consideration

The assessment raised no issues that would benefit from further consideration

## Comments On The Policy

- 1 The first paragraph of the policy is unclear as it states that “New development detract from the special qualities . . . . “. The paragraph would benefit from an amendment to read something like “New development must not detract from the special qualities . . . .”

### Conclusion

|                    |    |   |   |    |     |   |   |     |   |    |    |   |   |   |
|--------------------|----|---|---|----|-----|---|---|-----|---|----|----|---|---|---|
| <b>Objectives</b>  | ++ | 0 | + | 3  | +/- | 1 | O | 9   | - | 2  | -- | 0 | ? | 0 |
| <b>All Results</b> | ++ | 3 | + | 36 | +/- | 6 | O | 177 | - | 15 | -- | 0 | ? | 0 |

The policy allocates and provides the policy control for Green Wedges, which have been identified to prevent speculative development that can blur boundaries between settlement edges and open countryside that could result in incremental loss and the coalescence of settlements. Within designated Green Wedges development that prejudices the open nature of the Green Wedge will be resisted.

As a protectionist policy an assessment would be expected to realise negative effects for restrictions placed upon potential developments. The assessment of this policy reflects this position as single negative effects are realised in respect of housing provision and renewable energy generation.

By contrast the assessment realised 3 double positive effects for the retention of greenfield land and 36 single negative effects based largely around protection of the natural environment and the beneficial effects on community spirit as a result of maintaining well known settlement boundaries.

Whilst the policy does realise a higher number of positive effects when compared to the number of negative effects, meaning the policy comes out more positively on balance, it is not sufficient to make the policy positive overall due to the high level of neutral effects realised as part of the assessment. As a result it is considered that the policy is neutral overall.

### Actions For Consideration

The assessment raised no issues that would benefit from further consideration

| <b>All Results</b> | ++ | 15 | + | 81 | +/- | 0 | O | 138 | - | 3 | -- | 0 | ? | 0 |

This policy allocates Sites of Importance for Nature Conservation (SINC).

**This policy is an administrative action that contains no policy content.** As such the policy is not assessable.

SINCs are both allocated in development plans and given are given their protection through plan policy. The Policy Framework only allocates the SINCs. There is no policy that provides the policy protection that should applied to development proposals within the allocated SINC areas. Consequently all t his policy does is effectively list all the SINCs. Without any policy protection the SINCs will not have any effects and, therefore, an assessment of the policy will only realise “no effect to measure” results for each Objective and aim.

An assessment on this basis would provide no assistance in developing the policy framework for the plan.

Consequently, for assessment purposes, the information contained in the reasoned justification has been used to provide the policy element related to the SINC allocations. It is on the basis of this information that the assessment of this policy has been undertaken.

The assessment realises only 3 negative effects in respect of the provision of housing. By contrast the assessment realised 15 double positive effects, based primarily on protection of greenfield and the natural environment. In addition the assessment realises 81 single positive effects across a broad range of factors. The low level of negative effects and the high level of positive effects reflect that the policy is more of a design policy than a restrictive policy, as SINC designations do not preclude development.

Given the high number of single positive effects, in conjunction with the double positive effects and the low number of negative effects, on balance the policy is considered to be positive overall.

### Actions For Consideration

The assessment raised one issue that would benefit from further consideration.

## MG 23 - Sites Of Importance For Nature Conservation

---

- 1 The policy is an administrative action as it only lists the SINC, providing no policy framework for the consideration of proposed development within SINC areas. It is noticeable that paragraph 2 of the reasoned justification sets out the policy framework that would normally be attributed to SINC designations. However, this information is not within the policy itself and so its strength and effectiveness are severely restricted. The policy would benefit significantly from the incorporation of this policy information into the policy itself. The policy would then be a landuse policy.

## MG 24 – Development In Minerals Safeguarding Areas

| Sustainability Objective / Aim  | Assessment Of Effects                     |             |           | Level of Certainty |

## MG 24 – Development In Minerals Safeguarding Areas

### Conclusion

|                    |    |   |   |   |     |    |   |     |   |    |    |   |   |   |
|--------------------|----|---|---|---|-----|----|---|-----|---|----|----|---|---|---|
| <b>Objectives</b>  | ++ | 0 | + | 1 | +/- | 3  | 0 | 9   | - | 2  | -- | 0 | ? | 0 |
| <b>All Results</b> | ++ | 0 | + | 9 | +/- | 27 | 0 | 174 | - | 21 | -- | 3 | ? | 3 |

The policy allocates the Mineral Safeguarding Areas for the county borough and protects them from permanent built development that would compromise the ability to work the mineral.

The reason for identifying Safeguarding Areas is to ensure the development does not compromise the future ability to work the mineral, i.e. to protect the mineral for future extraction. Given this, the SEA/SA process needs to take account of two things, firstly the protection of the land afforded by the policy and, secondly, the reason for protecting the land (the working of the mineral). The assessment will realise significantly differing results for the land protection and the winning of the mineral. The timeframe for the winning of the mineral is unknown and, therefore, the effects relating to the winning of the mineral cannot be identified in any particular period of assessment. Consequently the differing effects are recorded as Positive/Negative results. The assessment realised 27 Positive/Negative effects based generally around the policy protection ensuring protection of natural environment, built assets, culture and heritage, with the negative of adverse impact upon the mineral operation commencing.

Only 9 single positive effects were realised relating to meeting the future needs of users, the effective and efficient use of land and promotion of carbon sinks. By contrast 21 single negative effects were realised, based on protection of culture and heritage, sustainable design, air pollution, community ownership of the environment, brownfield development and housing provision. In addition to this 3 double negative effects were realised for promoting the use of secondary materials.

Whilst the assessment does realise more negatives than positives, it is not significant enough to tip the balance to a positive overall outcome. It should also be noted that many of the negative effects realised in the Positive/Negative effects may not be realised within the plan period and there would be additional positive effects to balance out the identified negative effects. Overall the policy is considered to be neutral in effect.

### Actions For Consideration

The Assessment raised no issues that would benefit from further discussion.

## MG 25 – Buffer Zones

This policy allocates buffer zones around existing active quarries, within which development that would preclude the working of the minerals would not be permitted. The buffer zones provide an area around permitted quarries where sensitive development cannot be located, ensuring the continued viability of the mineral.

The SEA/SA assessment realised surprisingly few definitive effects. As a protection policy it would normally be expected to realise a number of negative effects due to the protection precluding otherwise appropriate development. However, the assessment realised only 9 single negative effects and those relate to high quality developments and local context, housing provision and meeting community needs. The limited negative effects are due to the particular characteristics of the buffer zones (and the quarries they surround), i.e. they isolated and remote and permanent urban forms of development do not readily locate close to them.

By contrast 33 single positive effects have been realised, broadly based on culture and heritage, protection of natural environment and the efficient and effective use of land.

With only 17% of the total number of results realising definitive effects, the policy can only be considered to neutral in effect overall.

### Actions For Consideration

The assessment raised no issues that would benefit from further consideration.

### Conclusion

|                    |    |   |   |    |     |   |   |     |   |   |    |   |   |   |
|--------------------|----|---|---|----|-----|---|---|-----|---|---|----|---|---|---|
| <b>Objectives</b>  | ++ | 0 | + | 3  | +/- | 0 | O | 11  | - | 1 | -- | 0 | ? | 0 |
| <b>All Results</b> | ++ | 0 | + | 33 | +/- | 3 | O | 189 | - | 9 | -- | 0 | ? | 3 |

### Actions For Consideration

It is unclear what alternative uses would be acceptable for the sites. The policy would benefit from an amendment to the Reasoned Justification outlining what uses would be considered appropriate for the sites.

For assessment purposes it has been assumed that sites are reclaimed/restored for greenfield uses. If this is not the case the assessment could realise significantly different results.

## **Comments on the Policy**

Paragraph 7.102 makes reference to sites that are not included in the policy. This is unnecessary and only causes confusion. Reference to the two sites not within the scope of the policy should be deleted.

### Conclusion

|                    |    |    |   |    |     |   |   |     |   |    |    |   |   |   |
|--------------------|----|----|---|----|-----|---|---|-----|---|----|----|---|---|---|
| <b>Objectives</b>  | ++ | 1  | + | 4  | +/- | 2 | O | 6   | - | 2  | -- | 0 | ? | 0 |
| <b>All Results</b> | ++ | 21 | + | 60 | +/- | 9 | O | 129 | - | 15 | -- | 0 | ? | 3 |

This policy sets out the policy protection for the Heritage Coast. As a protectionist policy it would be expected to realise negative effects for precluding development that otherwise be acceptable and the assessment did realise 15 single negative effects. These were realised from housing, employment and community facility provision and sustainable transport.

By contrast 21 double positive were realised relating to character heritage and protection of the natural environment, and 60 single positives were realised across a wide range of factors.

With over a third of the total effects being positive, and very few negative effects to counter them, over all the policy is considered to be positive.

### Actions For Consideration

The assessment raised one issue that would benefit from further consideration:

- 1 Criterion 3, as drafted, is very open, potentially allowing any development that might require a coastal location, irrespective of the potential damage it may cause. The Criterion would benefit from rewording to address appropriate coastal development that would not result in adverse impact to the Heritage Coast.

## Comments On The Policy

- 1 Criterion is very open and could potentially allow damaging development on the Heritage Coast. The Criterion would benefit from wording something like as follows:

*“Development that would be appropriate for a coastal location and would not have an adverse impact upon the character and integrity of the Heritage Coast. “*

### Conclusion

|                    |          |         |          |          |        |         |        |
|--------------------|----------|---------|----------|----------|--------|---------|--------|
| <b>Objectives</b>  | ++<br>0  | +<br>7  | +/-<br>1 | O<br>5   | -<br>2 | --<br>0 | ?<br>0 |
| <b>All Results</b> | ++<br>15 | +<br>78 | +/-<br>3 | O<br>135 | -<br>6 | --<br>0 | ?<br>0 |

The policy allocates land for an extension to the existing Porthkerry Park. As an allocation that retains greenfield land, negative effects might be expected to be realised from the preclusion of otherwise appropriate landuses. To a limited extent this is the case with 3 single negative effects being realised in respect of housing provision, whilst an additional 3 negative effects are a reflection of the tourist attraction nature of the Park, being realised through reducing the need to travel.

By contrast the assessment realises 15 double positive effects and 78 single positive effects based generally around economic factors associated with tourism and the protection of the park as a natural environment.

With over a third of the total number of effects being positive, and only six being negative, on balance it is considered that will have positive effects overall.

### Actions For Consideration

The assessment raised no issues that would benefit from further consideration.

## MG 29 - Tourism And Leisure

| Sustainability Objective / Aim  | Assessment Of Effects                     |             |           | Level of Certainty |
|---|---|-------------|-----------|--------------------|
|   | Short Term                                | Medium Term | Long Term |                    |
| <b>1 To provide the opportunity for people to meet their housing needs.</b>   | ?   | ?           | ?         | M                  |
| A Provide a mix of dwelling types and tenure  | ?   | ?           | ?         | M                  |
| B Build in sustainable locations, with good access to local facilities  | ?   | ?           | ?         | M                  |
| C Provide affordable housing  | ?   | ?           | ?         | M                  |
| D Preference for previously developed land in sustainable locations   | ?   | ?           | ?         | M                  |
| <p><b>Comments:</b></p> <p>General – Not a housing allocation policy. Housing to be allowed as ‘enabling development’ but unclear how much, if any, would be required</p> <p>Should housing be permitted, positives would be realised across the board. B and D could realise double positives.</p> | <b>Secondary, Cumulative, Synergistic</b> |             |           |                    |

## MG 29 - Tourism And Leisure

### Conclusion

|                    |   |   |  |   |  |   |   |
|--------------------|---|---|--|---|--|---|---|
| <b>Objectives</b>  | <div style="background-color: #92d050; padding: 5px; display: inline-block;">++</div> 1 | <div style="background-color: #c1e1c1; padding: 5px; display: inline-block;">+</div> 6  | <div style="background-color: #d1c4e9; padding: 5px; display: inline-block;">+/-</div> 1 | <div style="background-color: #fff9c4; padding: 5px; display: inline-block;">O</div> 4  | <div style="background-color: #ffe0b2; padding: 5px; display: inline-block;">-</div> 2 | <div style="background-color: #ff0000; padding: 5px; display: inline-block;">--</div> 0 | <div style="border: 1px solid black; padding: 5px; display: inline-block;">?</div> 1  |
| <b>All Results</b> | <div style="background-color: #92d050; padding: 5px; display: inline-block;">++</div> 9 | <div style="background-color: #c1e1c1; padding: 5px; display: inline-block;">+</div> 90 | <div style="background-color: #d1c4e9; padding: 5px; display: inline-block;">+/-</div> 3 | <div style="background-color: #fff9c4; padding: 5px; display: inline-block;">O</div> 99 | <div style="background-color: #ffe0b2; padding: 5px; display: inline-block;">-</div> 9 | <div style="background-color: #ff0000; padding: 5px; display: inline-block;">--</div> 3 | <div style="border: 1px solid black; padding: 5px; display: inline-block;">?</div> 24 |

The policy allocates two sites for tourism related developments. The reasoned justification to the policy indicates that the tourism development will require enabling development, although it does not set out what the enabling development is likely to be, although it goes on to advise that proposed developments that are overly biased toward residential uses will not be permitted. This lack of certainty has realised a large number of unclear effects, particularly in respect of the Housing Provision Objective set, where all of the effects are identified as unclear. However, it should be noted that if the reasoned justification to the policy included a clearer steer on what form the enabling development will take it is likely that the objective set would realise positive effects, with potential for double positive effects to be realised.

As a policy that allocates land for development the assessment realised negative effects for climate change and waste minimisation. This would normally be expected.

In contrast the assessment realises 9 double positive effects, from tourism and brownfield development and 90 single positive effects from a range of social and economic factors.

Despite the high number of unclear effects, the number of positive effects is equal to neutral effects, and with only 12 negative effects, on balance the policy is quite strongly positive in effect.

### Actions For Consideration

The assessment raises one issue that would benefit from further consideration

- 1 The reasoned justification to the policy alludes to enabling development being required to realise the tourism allocations, and it also advises that overly residential biased development will not be permitted. This lacks clarity and certainty. The reasoned justification would benefit from the inclusion of more detail on what is likely to comprise appropriate enabling development, which in turn could realise significantly more positive effects.

## Consideration of Results

|                          |             |            |              |             |            |             |            |
|--------------------------|-------------|------------|--------------|-------------|------------|-------------|------------|
| <b>MG Objectives</b>     | <b>++</b> 0 | <b>+</b> 3 | <b>+/-</b> 1 | <b>O</b> 9  | <b>-</b> 2 | <b>--</b> 0 | <b>?</b> 0 |
| <b>MG Policy Results</b> | <b>++</b> 0 | <b>+</b> 7 | <b>+/-</b> 3 | <b>O</b> 64 | <b>-</b> 5 | <b>--</b> 0 | <b>?</b> 0 |

The Managing Growth Policies set out the policy framework to control development over the plan period and allocates sites to meet landuse requirements. These policies are the most detailed of all the policies as they relate to specific types of landuses or specific sites themselves. Generally, in SEA/SA assessment terms, the more detailed or landuse specific the policy is the more negative the likely effects are, as effects can be more readily defined.

Despite the more detailed nature of the policies, the assessments realised only 4 overall negative results. These are addressed in turn below.

By contrast the assessments realised 7 positive results, with 2 positive results for economic factors (range and mix of housing, maintain and enhance retail centres), 4 positive results for social factors (meeting community needs, promote improvement in deprivation, provide a range of local facilities and meeting needs of users), and a positive result for an environmental factor (efficient and effective use of land).

3 Positive/Negative effects were also realised through the assessments, and these will be addressed in turn below.

The assessments realised a low overall number of defined effects. This, in part, is due to the specific and detailed nature of the policies within the policy set. Such policies will only relate to a specific, and relatively small number of, assessment factors when the assessments are undertaken, with the remaining factors realising neutral effects. In order for a definitive effect to be realised across an assessment factor it would need to realise defined effects from a significant number of policies and, given their specific and detailed nature, this is unlikely in many instances. This would be combined with the larger number of policies in this policy set, which require higher numbers significantly more defined effects to realise a defined result in the overall assessment.

## Overall Negative Effects

### 6 **To minimise the causes and manage the effects of climate change.** (- - 5, - 6, +/- 2 [13 of 23])

The negative effects for this Aim are directly related to the provision of economic development, with policy MG2 – Housing Allocations, MG4 – Strategic Site St Athan, MG5 – Affordable Housing, MG7 – Residential development, minor rural settlements and MG10 – Employment allocations realising double negatives. A further six single negative results were also received across a range of policies. Climate change factors invariably realise negative effects when considered against policies that promote development, purely from the basis that new additional development can only increase the causes of climate change. This is reflected in the results as this Objective concentrates the negative effects on development promoting policies. The negative effects realised on this Objective are what would be expected and it is unlikely that any mitigation can be put forward to reduce the impacts. The negatives, however, can be offset by positives realised elsewhere in the assessment and, as such, this is not a significant issue in SEA/SA terms.

### 6A **Reduce air pollution (e.g. transport / industry emissions)** (- - 4, - 7, +/- 2 [13 of 23])

Similarly to Objective 6 above, an SEA/SA assessment would be expected to realise negative effects where the policies promote development, especially where the development provides trip origins (housing) and destinations (employment shopping etc.). The negative effects for this Aim are directly related to the provision of economic development, with policy MG2 – Housing Allocations, MG4 – Strategic Site St Athan, MG7 – Residential development, minor rural settlements and MG10 – Employment allocations realising double negatives. In addition the assessment realised 7 single negative across a wider range of policies. It would be expected that policies that promote development would realise negatives for air pollution, as additional new development can only increase the level of pollution, particularly traffic related pollution. Similarly to Objective 6 above, the negative effects are a natural corollary for promoting new development, with little that can be done to mitigate the cause. However the negative effects can be offset against positives realised throughout the assessment. As such this is not a significant issue in respect of the SEA/SA.

### 6B **Reduce energy consumption (e.g. promote energy efficient building)** (- - 8, - 3, +/- 1 [12 of 23])

The provision of development will inevitably lead to an increase in energy consumption. The Managing Growth Policies allocate land uses and provide the policy framework for considering unallocated uses across the county borough. The assessment realised a number of strongly negative effects from policies MG1 - Housing Supply, MG2 – Housing Allocations, MG4 – Strategic Site St Athan, MG5 – Affordable Housing, MG7 – Residential development, minor rural settlements, MG9 - Gypsy and Traveller Sites, MG10 – Employment allocations and MG23 - Tourism & Leisure. Whilst similar to Objective 6 and Aim 6A, in that it would be expected to realise negative effects from policies that promote development, this Aim also has influences from a transport perspective as well. This is the reason that this Aim realises the highest number of double negative effects, although in terms of the

number of overall negative effects it is the same as Objective 6 and Aim 6A with 11. It is a natural corollary for policies that promote development, as these policies quite rightly do, to increase overall energy consumption. Mitigation for this issue can only be delivered through very issue specific policies or allocations that directly address energy usage. It should also be noted that national guidance contains much of the policy framework addressing the issue. Consequently the negative effects realised for this Objective are a natural result of policies that seek to promote development and it is unlikely that the plan could introduce mitigation into the policy framework without reiterating national policy.

### **Objective Set 6 – Climate Change**

This objective set realises the majority of the negative effects realised for the Managing Growth policies. As outlined above, policies that promote development will always realise negative effects for climate change. This policy set sets out the plan allocations for housing, employment and retail uses, so it would be expected that the assessment would realise negative effects. The assessments realise 18 double negative and 28 single negative effects for this Objective set. By contrast the assessments realise 13 single positives. Whilst the negative effects outnumber the positive effects, they only represent around a quarter of the overall results, with the vast remainder of the results being neutral. On balance the assessments realise an overall negatively biased result. Mitigation against the negative effects is largely outside the scope of the plan, as it is set out in National Guidance. Consequently there is little that the plan can do to mitigate the effects in this policy Set. It should be noted, however, that recommendations have already been made in the Core Strategic Policies Overview to address climate change in policy terms and any changes made to the policy framework could realise mitigation effects.

#### **7 To Minimise Waste (-3, -7, +/- 0 [10 of 23])**

It would be natural for the Managing Growth Policies to realise negative effects from this Objective purely because they promote development through the specific allocation of land. The assessments realise 10 negative effects, with the other 13 results being neutral. The lack of any positive effects raises concerns although the ability of the plan to address the issue should also be taken into account when considering the overall sustainability of the policy framework. New development will always give rise to increase waste generation (more people, more industrial processes, more retail packaging etc.) but it is almost impossible for a land use plan to mitigate against this. The plan can allocate facilities that can handle waste more sustainably, can seek to generate energy or reuse various forms of waste, but there is little a development plan can do to stop the generation of waste (which would be the requirement to mitigate against new development). Reuse of existing buildings is the most prominent way a plan can seek to reduce waste, but when considered in the context of the overall level of development it is insignificant.

#### **12 To reduce the need to travel and enable the use of more sustainable modes of transport. (-3, -7, +/- 3 [13 of 23])**

The Managing Growth Policies allocate sites for housing, employment and retail uses. This new development provides both trip origins (housing) and trip destinations (employment and retail). As such the Policy set could never seek to realise positive effects

from the first part of the Objective, which seeks the reduction in the need to travel. The ability of any development plan to influence “the need to travel” is extremely limited, if not impossible, as the purpose of the plan is to ensure the requirements of the authority area are met. This requires the allocations of sites to meet housing, employment and retail needs, which increases the overall need to travel. Therefore it is safe to say that the allocation policies and any policies that promote development, would realise negative effects in respect of this issue.

If it is taken that that “reducing the need to travel” realises negative effects anyway, the impact of the other Objective issues, use more sustainable modes, can be considered in respect of the number of double negatives that have been realised, in this case only 3. Given this position the results for this Objective are not a negative as the assessment results suggest. With only three negative effects realised for using sustainable modes, this is insignificant when considered against the remaining 13 neutral effects. As a result, whilst the assessment results indicate a negative overall effect, given the plan’s inability to address reduction in need, this Objective can only be considered to be neutral overall.

### Overall Positive/Negative Effects

The managing Growth Policies allocate land for built development and also allocate areas of protection, particularly for areas of the natural environment. These policies will realise markedly differing, opposing and potentially offsetting effects. When this scenario is added to Objectives and Aims that seek more than one issue, it is highly likely that a number of Positive/Negative effects will be realised. The assessments realised only 3 Overall Positive/Negative results, although a significant number of Objectives and Aims, which have received positive and negative effects, are identified as neutral overall as it is considered that the positive and negative effects are not significant enough to warrant Positive/Negative status.

#### 9 **To Protect And Enhance The Built And Natural Environment.** ( ++ 1, + 8, +/- 7, - 2, -- 0)

The Objective encompasses more than one issue. It seeks the protection and enhancement (which in itself could be considered to be two issues) of the built environment and the protection and enhancement of the natural environment. Allocation policies, irrespective of whether for built environment or natural environment protection, will realise both positive and negative effects, resulting in a high number of Positive/Negative result. In addition, as the policies realise both effects, it is likely that the assessment results will identify a low number of single effects results (whether negative or positive). This is borne out by the assessment results for the Policy set, which realise 7 Positive/Negative effects and only 11 other individual effects. In considering the results, the positive effects balance the negative effects and it can only be considered the resultant is effect is neutral overall.

**9A** *Protect or enhance natural assets such as biodiversity, flora and fauna, wildlife habitats, landscape, soil..* ( ++ 5, + 0, +/- 2, - 5, -- 2)

This objective addresses only one issue, namely the protection and enhancement of natural assets. Whereas the allocations policies realise opposing Positive/Negative effects for Objective 9 above, the fact that this Aim addresses only one issue means it will realise a higher number of single individual effects and a relatively low number of Positive/Negative effects. The assessment results reflect this position again, with a number of double effects being realised. However, a higher number of positive effects have been realised than negative effects, but these tend to balance each other out and the overall result for this Aim is considered to be neutral.

**12A** *Ensure new development is located in accessible locations from a range of travel modes.* ( ++ 1, + 5, +/- 2, - 2, -- 3)

This aim addresses whether development is located in places where they can be accessed by a range of travel modes, which will assist in realising modal shift and a more sustainable transport pattern. However, from a policy perspective, the plan needs to allocate development to meet the authorities needs across the administrative area. The plan starts with a relatively unsustainable settlement pattern and seeks to improve it. However, it also requires that allocations are made in locations that are not so sustainably located, for example housing allocations are identified in minor rural settlements to help support their existing services and facilities, even though public transport may not be a significant transport option. The assessment results reflect this position with a spread of effects. However, whilst the negative effects slightly outnumber the positive effects, they basically even each other out. Consequently this Aim is also considered to be neutral overall

## Conclusion

The Managing Growth Policies realise only 14 identified effects out of a total of 79 Objectives and Aims. This means that less than one in five of the objectives and Aims realised an overall effect. In addition the types of effect were well and relatively evenly distributed, with 7 positives, 4 Negatives and 3 Positive negative Effects. The low level and even distribution of the identified effects, in conjunction with the 65 neutral effects realised in the assessment can only lead to the conclusion that, as a policy set, the Managing Growth Policies will have an overall neutral effect.

## Additional Policies

Following the assessment of the original 23 policies in the Managing Growth Policy set, an additional 6 new policies were submitted for assessment. As the new policies are to comprise part of the Managing Growth Policy set, it is important that the results of their assessments are considered collectively with the original managing Growth Policies. To aid in the consideration of the assessments as they were undertaken over time, two tables have been produced reflecting the different assessment scenarios. Appendix 1 contains a table listing the assessment results and overall result for the 23 Original Managing Growth Policies. Appendix 2 builds on Appendix 1 by

adding the assessment results of the 6 additional policies to the 23 original policies to enable all results to be considered together. In addition to this the overall results for both the original policies and the original and additional policies combined are set out at the right hand end of the table so that they can be considered together.

In considering the additional policies, the important factor is how the additional policy assessment differs from the original policy assessment, as this will indicate where the additional policies have significant enough effects to influence the overall result. The additional policies have changed 4 of the original overall assessments, 1 positively and 3 negatively. These are discussed below.

**4** *Reduce the causes of deprivation* (From 0 to +)

Three of the six policies realised a single positive effect in the assessment, with the remaining 3 policies realising neutral effects. The original assessment overview considered the policy to be neutral, although it was heavily positively biased. Whilst the additional policies realised an equal number of positive and neutral effects, the addition of the positive effects, and absence of any countering negatives, means that the Objective scores more positives which tips the balance, and is now considered to be positive overall.

**1A** *Provide a mix of dwelling types and tenure* ((From + to 0)

The assessments of the 6 additional policies realised 6 neutral effects for this Aim. The addition of the six neutral effects from the additional policies dilutes the positive effects realised through the original Policy assessments. As a result the balance of effects has changed for the policy and an overall neutral result is considered appropriate for this Aim

**14** *To maintain and enhance the vitality and viability of the Vale of Glamorgan's town, district and local centres* (From + to 0)

The assessment of the 6 additional policies realised one single negative effect and 5 neutral effects. These results dilute and counter the positive results realised from the assessment of the original policies. As a result the balance of effects has changed for the policy and an overall neutral result is considered appropriate for this Objective.

The Additional Policies have, therefore, realised positive improvement to one Objective and negative movement in an Objective and an Aim, albeit from a positive overall effect to a neutral one. The additional policies did not realise any new negative effects, although the issues of Climate Change and Sustainable Transport did realise significant negatives, although these just reinforced the negative findings of the original policy assessment. It would be fair to say that the Additional Policies have not greatly affected the original Policy Assessment findings.

---

## Overall Conclusion

The combined assessments of the Managing Growth Policies (Original and Additional) realises 6 positive results, 5 negative results and 3 Positive/Negative results. When considered on this basis the policy set is marginally positive in nature. However in looking a little closer at the assessment results it is noticeable that a number of the neutral assessments have a definite positive bias. In contrast a number of assessments have a negative bias, but a significant number of these relate to climate change and sustainable transport issues. It is important to note that significant mitigation can be made in respect of these issues, but they lie largely outside the remit of the development plan and cannot, therefore, be taken into account in the SEA/SA assessments. For example, sustainable building is enshrined in national guidance and statute, with housebuilders now required to build to high sustainable standards.

In considering the overall performance of the Managing Growth Policies these “unseen” elements are significant and will have a distinct impact upon the outcome that the policies will have. Whilst it would be appropriate to conclude that the assessment realises a marginally positive effect overall, there is a groundswell of positive effects that lie beneath the assessment results and, as such, it is likely that the policy set will have a more positive overall effect than the assessment process indicates.

## Recommendations For Change

The assessment raised no overall issues that would benefit from further consideration.

## SA Assessment Criteria: Phase 2 Barry Waterfront

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |
| Development at the site would have positive and negative impacts on sustainability  | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria  | Effect |
|---|---|--|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | <p>The site is being considered for a mixed use development comprising commercial, leisure, retail and a substantial element of residential development. There is therefore the potential for the site to deliver additional housing including affordable housing within the Barry sub market area where a significant need has been identified.</p> | ++     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | <p>The site is being considered for a mixed use development which includes an element of leisure use.</p> <p>The site is currently vacant, previously developed land and development as proposed would not result in the loss of a community facility.</p> <p>Given the scale of the proposed development</p>  | ++     |

|   |   |   |           |
|---|---|---|-----------|
|   |   | there is the potential for the provision of enhanced / new community facilities in addition to the leisure uses proposed.   |           |
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | The site is well located within the Comprehensive Redevelopment Area of Barry Waterfront and is within walking distance of the existing and proposed services and facilities available within the dock area. The site is within walking distance of the wider range of services and facilities available within Barry town and is in close proximity to Barry Town railway station. Local buses operate regular services within the waterfront area and development could provide additional walking and cycling infrastructure to complement existing facilities within earlier development phases.  | <b>++</b> |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.   | A minor positive impact on reducing the causes of deprivation given that the site has been promoted for housing within an area ranked low in the indices of multiple deprivation.   | <b>+</b>  |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.   | Development of the site(s) would not lead to coalescence and would not result in the loss of a community facility. The development will provide additional community facilities.  | <b>0</b>  |
| <b>6. To minimise the causes and manage the effects of climate change</b> | The site would not increase the need to travel and or increase travel distances<br><br>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources<br><br>The site is capable of incorporating renewable energy sources or energy conservation measures | The site is well located within the Comprehensive Redevelopment Area of Barry Waterfront and is within walking distance of the existing and proposed services and facilities available within the dock area. The site is within walking distance of the wider range of services and facilities available within Barry town and is in close proximity to Barry Town railway station. Local buses operate regular services within the waterfront area and development could provide additional walking and cycling infrastructure to complement existing facilities within earlier development phases.<br><br>The EA have advised that the site lies within a | <b>++</b> |

|  |   |  |    |
|--|---|--|----|
|  |   | <p>zone C2 of the Dam however an FCA for the Comprehensive redevelopment area has been prepared and approved by the EA.</p> <p>Given the scale of the site and the mixed uses proposed there is considerable potential for the incorporation of energy efficiency measures. New commercial and residential properties would be required to meet the current energy efficiency standards.</p>   |    |
| <b>7. To minimise waste</b>  | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).   | The site(s) is being considered for mixed use development and would generate additional domestic and commercial waste.   | -- |
| <b>8. To use land effectively and efficiently</b>                              | <p>The site is a brownfield site and / or involves the beneficial re-use of existing buildings.</p> <p>The site is capable of accommodating high density development</p>  | The site comprises vacant and previously developed land within the Comprehensive redevelopment Area of Barry Waterfront. The site is capable of accommodating high density development similar to that within the surrounding residential areas.   | ++ |
| <b>9. To protect and enhance the built environment and natural environment</b> | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>Development of the site(s) would not impact upon a conservation area however there are a number of listed buildings located within the operational port although it is unlikely that development as proposed would adversely impact upon the listings.</p> <p>The site(s) are located close to the southern edge of the Hayes Point to Bendricks Rock SSSI although this is a geological SSSI and it is unlikely that such a development would have an adverse impact.</p> <p>The Council ecologist has advised that the site hosts a protected grassland species and that compensation measures would be required if development need outweighs the ecological importance of the site (-ve).</p> | -  |

|  |   |   |           |
|--|---|---|-----------|
| <b>10. To provide a high quality environment within all new developments</b>   | The development has the potential to support high quality public realm.   | Given the scale of the proposed development and its relationship with the other developable sites within the comprehensive redevelopment Area of Barry Waterfront there is significant potential to develop high quality public realm.  | <b>++</b> |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area). | Development of the site would not impact upon a conservation area however there are a number of listed buildings located within the operational port.<br><br>Additionally a part of the site is located close to the southern edge of the Hayes Point to Bendricks Rock SSSI although this is a geological SSSI and it is unlikely that such a development would have an adverse impact.  | <b>0</b>  |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | The site is well served by public transport and accessible by walking and cycling.<br><br>Services and facilities are easily accessible by a range of transport modes including walking and cycling.        | The site is well located in the Comprehensive Redevelopment Area of Barry Waterfront and is within walking distance of the existing and proposed services and facilities available within the dock area. The site is within walking distance of the wider range of services and facilities available within Barry town. The site is adjacent to Barry Docks railway station and local buses operate regular services within the waterfront area. The development could provide additional walking and cycling infrastructure to complement existing facilities within earlier development phases. | <b>++</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | The proposal is for new employment development<br><br>The site would not result in a loss of employment land that has been identified as having a continued economic role.                                  | The site(s) are being considered for mixed use development which will include new employment opportunities. Development as proposed would not result in the loss of employment land.  | <b>++</b> |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b>                      | The site is located either within a centre, edge of centre or an out of town location.  | The site(s) are well located in relation to the primary retail centre of Barry and will provide future residents with the opportunity to utilise the services and facilities available.   | <b>+</b>  |

|   |  |   |          |
|---|--|---|----------|
| <b>15. To promote appropriate tourism</b> | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility. | The site is not being considered for tourism uses however the inclusion of leisure facilities will contribute to the overall attraction of Barry waterfront and improved links with Barry Island will support the areas tourist role. | <b>+</b> |
|---|--|---|----------|

| ++ | + | 0 | - | -- | +/- | ? |
|----|---|---|---|----|-----|---|
| 8  | 3 | 1 | 2 | 1  | 0   | 0 |

### SA Summary Comments

This is a significant brown field site within the Comprehensive Redevelopment Area of Barry Waterfront where the principle of development has already been established and accepted. The site has been promoted for mixed use development comprising commercial, leisure, residential and retail. The site is located in close proximity to the range and choice of services and facilities available within Barry Town and the first phase of the waterfront development. The site is in a sustainable location being close to local services and facilities, public transport and within walking distance of the town centre. While the EA have expressed concerns over the possible flooding of the site an FCA for the whole of the redevelopment area has been completed and accepted by the EA.

Overall this is a strongly positive assessment against the sustainability objectives which reflects the sites sustainable location and its inclusion within the Barry Waterfront Comprehensive Redevelopment Area and the contributions that it can make to the enhancement of local services and facilities. Negative scores have been realised as a result of the biodiversity implications of development however it is considered that these can adequately be addressed at the planning application stages by the imposing of suitable conditions.

## SA Assessment Criteria: Land at Higher End St.Athan

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |
| Development at the site would have positive and negative impacts on sustainability  | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria   | Effect |
|---|---|---|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | <p>The site has not been promoted solely for Affordable Housing.</p> <p>The site has been promoted for residential development and therefore has the potential to deliver affordable housing that would contribute towards meeting the identified need within the coastal housing market.</p> | +      |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | <p>The site is not promoted for community, leisure or recreational facilities.</p> <p>Given the scale of the proposed residential development the site has the capacity to deliver community facilities.</p>  | +      |

|   |   |   |            |
|---|---|---|------------|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | The site adjoins the existing built form of St and is within 500 meters of the centre of St Athan which is accessible by both walking and cycling.<br><br>A bus stop is located approximately 150 metres from the site with regular services to Barry, Cowbridge, Cardiff and Llantwit Major.   | <b>+</b>   |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.   | Residential development in this location may provide the opportunity for future residents to access employment associated with the enhancement of RAF St Athan. Additionally, St Athan is relatively central within the Vale and neighbouring employment at Llandow Industrial and Trading Estates and Cardiff Wales Airport.   | <b>+</b>   |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.   | Development of this site would not lead to coalescence however the site lies between the western part of St Athan along Llantwit Major Road and the RAF base.<br><br>The proposal would not result in the loss of recreational or community facilities.   | <b>0</b>   |
| <b>6. To minimise the causes and manage the effects of climate change</b> | The site would not increase the need to travel and or increase travel distances<br><br>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources<br><br>The site is capable of incorporating renewable energy sources or energy conservation measures | The site adjoins the existing built form of St and is within 500 meters of the centre of St Athan and is therefore considered to be accessible by both walking and cycling.<br><br>It is likely that residents would still need to travel to other centres such as that available nearby Llantwit Major. However St Athan is well serviced by public transport and regular train services are accessible at nearby Llantwit Major<br><br>The site has no identified flooding issues<br><br>Residential development will be required to meet existing energy efficiency standards. Due | <b>+/-</b> |

|  |  |  |          |
|--|--|--|----------|
|  |  | to site topography on site renewable energy options may be limited.  |          |
| <b>7. To minimise waste</b>  | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).  | The proposed development will generate additional domestic waste.  | -        |
| <b>8. To use land effectively and efficiently</b>  | The site is a brownfield site and / or involves the beneficial re-use of existing buildings.<br><br>The site is capable of accommodating high density development  | The 1986 Agricultural land classification map for South Glamorgan shows the site lies within grade 3a agricultural land.<br><br>It is likely that the site topography and surrounding built form would mean that the site would be developed at low/medium densities similar to the surrounding areas. | -        |
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.<br><br>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation. | The site would not have a negative impact on a conservation area.<br><br>The site is not affected by any landscape designation, and no nature conservation interests have been identified within the site.   | <b>0</b> |
| <b>10. To provide a high quality environment within all new developments</b>   | The development has the potential to support high quality public realm.  | Improvements to public realm are likely to be limited to within the site itself due to the nature and character of the surrounding built form.   | <b>0</b> |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).  | The site is not affected by any archaeological or historic importance.   | <b>0</b> |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | The site is well served by public transport and accessible by walking and cycling.<br><br>Services and facilities are easily accessible by a range of transport modes including walking and cycling.   | The site is within 500 meters of the centre of St Athan and is considered to accessible by both walking and cycling.<br><br>A bus stop is located approximately 150 metres from the site with regular services to Barry, Cowbridge, Cardiff and Llantwit Major.  | <b>+</b> |

|   |  |  |          |
|---|--|--|----------|
| <b>13. To provide for a diverse and wide range of local job opportunities</b>                   | The proposal is for new employment development<br><br>The site would not result in a loss of employment land that has been identified as having a continued economic role. | The site is not promoted for employment nor would it lead to a loss of employment land.  | <b>0</b> |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b> | The site is located either within a centre, edge of centre or an out of town location.   | The St Athan village centre is designated as a local retail centre and is with 400 meters of the site. The extent to which the proposal would support these facilities may be less than development adjacent to the centre, therefore a neutral score is realised.<br><br>The centre of St Athan village is designated as a local retail centre and is within 400 meters of the site. It is likely that the proposal would support these facilities. | <b>0</b> |
| <b>15. To promote appropriate tourism</b>   | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility.   | The proposal is not for new or enhanced tourism nor would it lead to a loss of a tourism facility.   | <b>0</b> |

### SA Summary Comments

The candidate site performs well against the key sustainability issues relating to accessibility, supporting and enhancing community facilities. These are limited to single positives as a result of the sites not being within direct proximity to key services, but as the site is within 500 meters it is still considered to offer good accessibility by both walking and cycling. Also related to this is positive support

that residential development would have in relation to existing services found within St Athan village. Neutral scores primarily result from effects not being directly associated with the development itself.

Combined positive and negative impacts relate to effects arising from climate change, highlighting the tensions between the sites limited scope for providing on site renewable due to site topography and the acceptance that residents will nevertheless travel further afield. Negative effects identified are associated with the loss of Greenfield development and likely low to medium density of the site, partly due to site topography and character of surround residential uses. Additionally a negative impact is that resulting from the generation of waste – common to all development proposals.

## SA Assessment: Land at Church Farm St Athan

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |

| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |

| Sustainability Objective  | Appraisal guidance notes:  | Assessment Criteria  | Effect |
|---|--|--|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study.</p> | <p>The site has not been promoted solely for Affordable Housing.</p> <p>The site has been promoted for residential development and as a large residential site it has the potential to deliver affordable housing units that would contribute towards meeting the identified affordable housing need within the coastal housing market area.</p> | ++     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities</p>  | <p>The site is not promoted for community, leisure or recreational facilities.</p> <p>The scale of the proposed residential development has the potential to provide new community facilities and or enhance existing facilities.</p>  | ++     |

|   |   |  |           |
|---|---|--|-----------|
| <b>3. To maintain and improve access for all</b>            | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | <p>The site adjoins St Athan Village and also lies adjacent to existing residential development. In this regard the site offers good accessibility to the services available within the centre of St Athan.</p> <p>These services are also capable of being accessed from the site by pedestrians and cyclists. However it is likely that provision of a safe cycle way and enhanced pedestrian facilities will be required to enable future residents to take full advantage of the sites accessibility.</p> <p>There is an existing bus stop adjacent to the site which has regular services to Barry, Cardiff and Llantwit Major.</p> | <b>++</b> |
| <b>4. Reduce the causes of deprivation</b>                  | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation. | <p>Residential development would provide the potential for residents to access future employment opportunities associated with the enhancement of RAF St Athan. Additionally, St Athan is relatively central within the Vale and neighbouring employment at Llandow Industrial and Trading Estates, and Cardiff Wales Airport.</p> <p>It is likely that there residents will also travel to other areas for employment.</p> <p>The site also adjoins St Athan school offering good access to educational facilities, and would provide the opportunity to deliver affordable housing in an area of need.</p>                             | <b>+</b>  |
| <b>5. To maintain, protect and enhance community spirit</b> | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>  | <p>Development of this site would not lead to coalescence. The proposal would present a logical expansion of the settlement.</p> <p>The proposal would not result in the loss of recreational or community facilities, but has the potential to provide new and enhance existing facilities.</p>   | <b>+</b>  |

|  |  |   |                   |
|--|--|---|-------------------|
| <p><b>6. To minimise the causes and manage the effects of climate change</b></p> | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> <p>The site is capable of incorporating renewable energy sources or energy conservation measures</p> | <p>Future occupiers would be able to access existing village facilities by bike or on foot provided appropriate access is provided. However it is likely that residents would still would need to travel to other centres such as that available nearby Llantwit Major where a greater number of services and facilities exist.</p> <p>The site has no identified flooding issues.</p> <p>Residential development will be required to meet existing energy efficiency standards. As a large flat site, there may be scope for the incorporation of a range of options for on site renewable energy generation</p> | <p><b>+/-</b></p> |
| <p><b>7. To minimise waste</b></p>   | <p>The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).</p>   | <p>New development proposal will generate additional domestic waste.</p>  | <p><b>-</b></p>   |
| <p><b>8. To use land effectively and efficiently</b></p>                         | <p>The site is a brownfield site and / or involves the beneficial re-use of existing buildings.</p> <p>The site is capable of accommodating high density development</p>   | <p>The proposal would involve development of greenfield land, and the 1986 Agricultural Land Classification map indicates the site as being Grade 3a agricultural land.</p> <p>The site is adjoins existing residential settlement pattern for St Athan and presents a logical extension of the settlement. It is likely that the site is capable of accommodating high density development, as highlighted by the recently completed residential development opposite.</p>   | <p><b>+/-</b></p> |

|  |   |  |           |
|--|---|--|-----------|
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>The site would not have a negative impact on a conservation area.</p> <p>The site is not affected by any landscape designation, and no nature conservation interests have been identified within the site.</p> <p>The site is bounded by hedgerows which should be retained as part of any future development proposal. This would screen future development and help retain the rural character of this part of the Village.</p> | <b>0</b>  |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>The site would offer a logical extension of the existing settlement pattern and has potential to develop a high quality public realm.</p>   | <b>+</b>  |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | <p>The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).</p>  | <p>The site is not affected by any archaeological or historic importance, or natural conservation designations.</p>  | <b>0</b>  |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p>   | <p>Bus services are accessible from the adjacent bus which provides regular services to Barry, Cowbridge, Cardiff, and Llantwit Major. The furthest point of the site lies within 400m of the village and offers the opportunity for residents to access existing services and facilities available.</p>   | <b>++</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>   | <p>The site is not promoted for employment nor would it lead to a loss of employment land.</p>   | <b>0</b>  |

|   |  |   |          |
|---|--|---|----------|
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b> | The site is located either within a centre, edge of centre or an out of town location.                             | The site is located within close proximity to St Athan village centre, which is designated as a local retail centre. Additional residential development may assist in supporting existing facilities. | <b>+</b> |
| <b>15. To promote appropriate tourism</b>   | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility. | The proposal is not for new or enhanced tourism nor would it lead to a loss of a tourism facility.  | <b>0</b> |

### Effect Summary Table

| <b>++</b> | <b>+</b> | <b>0</b> | <b>+/-</b> | <b>-</b> | <b>--</b> | <b>?</b> |
|-----------|----------|----------|------------|----------|-----------|----------|
| <b>4</b>  | <b>4</b> | <b>4</b> | <b>2</b>   | <b>1</b> | <b>0</b>  | <b>0</b> |

### SA Summary Comments

The candidate site performs well against the key sustainability issues relating to accessibility, supporting and enhancing community facilities. This is primarily as a result of the sites close proximity to the existing settlement pattern and the ability for future residents to access local services available within St Athan by walking and cycling and further afield by existing public transport services. However the appraisal has highlighted the need to enhance walking and cycling facilities along Gileston Road to fully take advantage of this. Additionally as a large site, it offers the opportunity to secure a significant level of affordable housing to meet the identified need within the coastal housing market.

Neutral scores primarily result from effects not being directly associated with the development itself, and a negative impact resulting from the generation of waste – common to all development proposals. Combined positive and negative impacts relate to effects arising from climate change, highlighting the tensions between the sites potential for providing on site renewable and good accessibility and the acceptance that residents will nevertheless travel further afield. Similarly, the loss of Greenfield development is identified as a negative, however its close proximity to existing settlement pattern and potential for high density development are seen as a positives in terms of using land effectively.

## SA Assessment: Land to the north of Weycock Cross, Barry

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development of the site will have both positive and negative impacts on sustainability  | +/-    |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |

| Sustainability Objective  | Appraisal guidance notes:  | Assessment Criteria  | Effect |
|---|--|--|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study.</p> | The site is being considered for a mixed use development of housing and employment. 10ha is to be allocated for employment use within a wider and larger housing allocation. As a large residential development there would be the potential to deliver a significant number of affordable housing units in an area where a significant need has been identified.  | ++     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>   | The site is under consideration for a mix of employment (B1 office use) and housing and does not promote community, leisure and recreational facilities, nor would it lead to a loss of a community facility. However given the scale of the proposed development there is likely to be potential for the provision of enhanced and/or new community facilities e.g. sustainable transport measures, play areas. | +      |

|   |   |  |           |
|---|---|--|-----------|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | <p>The site is located on the outskirts of Barry and is approximately 3 kilometres from the town's main retail centre and less than 2 kilometres from High Street district centre and Park Crescent local centre. The site is well located to access local bus routes which operate regular services along Pontypridd Road to numerous locations within the Vale. Rail services are accessible from within the town and provide regular and easy access to Cardiff and Bridgend; however the nearest station is approximately 2.5 kilometres away. However the site is separated from the main built up area of the town by the A4050 and while access via walking and cycling is possible, no crossing facilities exist.</p> <p>Future development could contribute to local sustainable transport improvements e.g. walking and cycling facilities to address the issues identified above.</p> | <b>++</b> |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.                       | Positive impact on reducing causes of deprivation given its promotion for employment and housing within an area ranked low against the indices of multiple deprivation.  | <b>++</b> |
| <b>5. To maintain, protect and enhance community spirit</b>               | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>  | <p>Development of this site would not lead to coalescence.</p> <p>The proposal would not result in the loss of recreational or community facilities however a PROW crosses the site and the openness of the area affords considerable visual amenity.</p>  | <b>0</b>  |
| <b>6. To minimise the causes and manage the effects of climate change</b> | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> | The site is located on the outskirts of Barry and is approximately 3 kilometres from the town's main retail centre and less than 2 kilometres from High Street district centre and Park Crescent local centre. The site is well located to access to local bus routes which operate regular services along Pontypridd Road to  | <b>+</b>  |

|   |  |   |    |
|---|--|---|----|
|   | <p>The site is capable of incorporating renewable energy sources or energy conservation measures.</p>  | <p>numerous locations within the Vale. Rail services are accessible from within the town and provide regular and easy access to Cardiff and Bridgend; however the nearest station is approximately 2.5 kilometres away. The site is separated from the main built up area of the town by the A4050 and while access via walking and cycling is possible, no crossing facilities exist.</p> <p>Future development could contribute to local sustainable transport improvements e.g. walking and cycling facilities to address the issues identified above.</p> <p>Zone B flood risk and surface water flooding areas have been identified within the site and the EA have advised that consideration should be given to surface water disposal and management.</p> <p>Given the scale of the site under consideration, there is scope for the incorporation of renewable energy sources or energy conservation measures. In addition, future development of the site could incorporate sustainable development measures to address issues such as surface water run off.</p> |    |
| <b>7. To minimise waste</b>                       | <p>The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).</p>   | <p>Future development for employment and housing would generate additional commercial and domestic waste.</p>   | -- |

|  |   | vicinity.  |    |
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>The site is not located within a conservation area and development as proposed would not impact upon a historic garden or building of historic interest.</p> <p>Development of the site is likely to have a detrimental impact upon a number of local and national ecological and landscape designations, including Ancient Woodland, SSSI and SLA. The CCW have raised concerns over the development of the site and the impact that urbanisation of this site would have on the Barry Woodlands SSSI.</p> | -- |
| <b>10. To provide a high quality environment within all new developments</b>   | The development has the potential to support high quality public realm.   | As an employment site within a wider housing development the site has the potential to develop a high quality public realm. The benefits of which would be felt by the residents and workers, with the potential to extend beyond the site given its prominence/location near the primary road network.  | +  |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).   | Development of the site is likely to have a detrimental impact upon a national ecological designation namely the Barry Woodland SSSI and CCW have raised concerns over the development of the site and the impact that this would have on the designation.   | -- |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p>   | The site is located on the outskirts of Barry and is approximately 3 kilometres from the town's main retail centre and less than 2 kilometres from High Street district centre and Park Crescent local centre. The site also lies within close proximity to services and facilities at Highlight Park and along Port Road e.g.   | ++ |

|  |   |  |                  |
|--|---|--|------------------|
|  |   | <p>supermarket, doctors and secondary schools.</p> <p>The site is well located to access local bus routes which operate regular services along Pontypridd Road to numerous locations within the Vale. Rail services are accessible from within the town and provide regular and easy access to Cardiff and Bridgend; however the nearest station is approximately 2.5 kilometres away.</p> <p>The site is separated from the main built up area of the town by the A4050 and while access via walking and cycling is possible, no crossing facilities currently exist. However, development as proposed could contribute to local sustainable transport improvements.</p> <p>Furthermore, the co-location of employment and residential uses on this site provides the opportunity for employees to live locally thereby reducing significant commuting.</p> |                  |
| <p><b>13. To provide for a diverse and wide range of local job opportunities</b></p>                   | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p> | <p>The proposal is for 10ha of employment land as part of a wider housing development.</p> <p>The site would not result in a loss of employment land and development as proposed would further enhance the employment opportunities within the local area.</p> <p>This employment use is B1 office use to provide an edge of town Business Park location for Barry.</p>  | <p><b>++</b></p> |
| <p><b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b></p> | <p>The site is located either within a centre, edge of centre or an out of town location.</p>   | <p>The site is located on the outskirts of Barry and is in close proximity to local, district and town retail centres. However given the relative scale of the proposed development to Barry, it is considered unlikely that any future development would have a noticeable affect</p>   | <p><b>0</b></p>  |

|   |  |  |          |
|---|--|--|----------|
|   |  | upon the viability of any of these centres.  |          |
| <b>15. To promote appropriate tourism</b> | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility. | The proposal would not contribute to the promotion or development of tourism within the Vale of Glamorgan. | <b>0</b> |

### Effect Summary Table

| ++ | + | 0 | +/- | - | -- | ? |
|----|---|---|-----|---|----|---|
| 5  | 3 | 3 | 0   | 0 | 4  | 0 |

### SA Summary Comments

The site is under consideration for a mixed use housing and employment (specifically B1 office use) development. 10ha is to be allocated for employment use within a wider housing allocation. The site is located on the outskirts of Barry and is approximately 3 kilometres from the town's main retail centre and less than 2 kilometres from High Street district centre and Park Crescent local centre. The site is well located to access local bus routes which operate regular services along Pontypridd Road and the A4050 to numerous locations within the Vale. Rail services are accessible from within the town and provide regular and easy access to Cardiff and Bridgend however the nearest station is approximately 2.5 kilometres away. The site is separated from the main built up area of the town by the A4050 and while access via walking and cycling is possible, no crossing facilities exist.

The proposal would involve development of greenfield land that has been identified as Grade 3 on the 1966 Agricultural Land Classification map. Development of the site is likely to have a detrimental impact upon a number of local and national ecological and landscape designations, including Ancient Woodlands, SSSI and SLA. The CCW have raised concerns over the development of the site and the impact that urbanisation of this site would have on the Barry Woodlands SSSI. Zone B flood risk and surface water flooding have been identified within the site and the EA have advised that consideration should be given to surface water disposal and management.

## SA Assessment Criteria: Barry Island Pleasure Park, Barry Island

| <b>SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL</b>                    |  |   |               |
|---|--|---|---------------|
|   |  | <b>Assessment Criteria</b>  | <b>Effect</b> |
|   |  | Development at the site will have a positive impact on sustainability   | ++            |
|   |  | Development at the site will have a some positive impact on sustainability  | +             |
|   |  | Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects.   | 0             |
|   |  | Development at the site will have a slight negative impact on the sustainability.   | -             |
|   |  | Development at the site will have a very negative impact on sustainability  | --            |
|   |  | Development of the site will have both positive and negative impacts on sustainability.   | +/-           |
|   |  | The impact of an issue cannot be predicted at this stage  | ?             |
| <b>Sustainability Objective</b>   | <b>Appraisal guidance notes:</b>   | <b>Assessment Criteria</b>  | <b>Effect</b> |
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study.</p> | The site has been promoted for a mixed use development comprised primarily of residential apartments (circa 240 units) but also a hotel, leisure facilities, public house, retail units and car parking. The site therefore offers the potential to deliver a significant number of affordable units over the plan period in an area of substantial identified need. The range of housing however would be restricted to apartments.              | ++            |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>   | <p>The site has been promoted for a mixed use development comprised primarily of residential apartments (circa 240 units) but also a hotel, leisure facilities, public house, retail units and car parking.</p> <p>Development as proposed would result in the loss of the existing pleasure park and the associated leisure businesses located along the boundary of the site (amusement arcades, retail premises etc.) however the proposal</p> | ++            |

|  |   |   |           |
|--|---|---|-----------|
|  |   | <p>includes modern replacement leisure facilities which although different from the current facilities available would compensate for the loss and possibly enhance the tourism facilities available.</p> <p>Given the proposed scale of the development and the demands and pressures that it would place on the surrounding area there would be significant opportunity/need to provide additional community facilities e.g. highway improvements, public realm enhancement, sustainable transport improvements</p>   |           |
| <b>3. To maintain and improve access for all</b> | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | The site is located at the heart of Barry Island a traditional tourist destination. As a result, the area is well served by public transport with regular rail and bus services operating in close proximity to the site. Barry Island is easily accessible by foot from the main town and while there is little by way of cycling infrastructure, the area offers significant potential to develop new routes e.g. Barry Island Causeway. Secondary phases at Barry Waterfront will significantly improve access to Barry Island and will include additional sustainable transport facilities e.g. new walking and cycling infrastructure. | <b>++</b> |
| <b>4. Reduce the causes of deprivation</b>       | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation. | As a mixed use development that includes a hotel, leisure facilities and retail units the proposal would improve access to local employment opportunities and has the potential to deliver significant levels of improvements to the built environment contributing to the causes of deprivation within Barry an area with the highest concentration of deprived wards within the Vale of Glamorgan.  | <b>+</b>  |

|   |   |   |                  |
|---|---|---|------------------|
| <b>5. To maintain, protect and enhance community spirit</b>               | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>  | <p>Development of this site would not lead to coalescence.</p> <p>The proposal would result in the loss of an existing local recreational/community facilities (amusement park and associated retail outlets) however the replacement facilities within the mixed use development would compensate for this loss and further add to the tourism offer at Barry Island.</p>  | <p><b>+</b></p>  |
| <b>6. To minimise the causes and manage the effects of climate change</b> | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> <p>The site is capable of incorporating renewable energy sources or energy conservation measures.</p> | <p>The mixed use development proposed would be an additional and modern attraction at Barry Island. The site is located at the heart of Barry Island and the area is well served by public transport as a result of its historic role as a tourist destination. Regular bus and rail services operate in close proximity to the site. Barry Island is accessible on foot from the main town and while there is little by way of cycling infrastructure, the area offers significant potential to develop new routes e.g. Barry Island Causeway. Secondary development phases at Barry Waterfront will provide improved access to Barry Island and will include additional sustainable transport facilities e.g. new walking and cycling infrastructure.</p> <p>The area is not prone to flooding.</p> <p>Given the scale of the proposed development the potential exists to incorporate energy efficiency measures and new houses would be required to meet the current energy efficiency standards.</p> | <p><b>++</b></p> |
| <b>7. To minimise waste</b>   | <p>The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).</p>  | <p>The proposed development is substantial and will generate additional domestic and commercial waste associated with the future use.</p>   | <p><b>--</b></p> |

|   |   |  |          |
|---|---|--|----------|
| <p><b>8. To use land effectively and efficiently</b></p>                              | <p>The site is a brownfield site and / or involves the beneficial re-use of existing buildings.</p> <p>The site is capable of accommodating high density development</p>  | <p>The proposal would involve development of brown field site in a prominent coastal location.</p> <p>The mixed use development proposed incorporates circa 240 residential apartments in conjunction with retail and leisure facilities. The site is therefore capable of accommodating high density development however such a density can only be achieved by building multi storey apartments and given the highly prominent location of the site it is considered that this would result in an adverse visual impacts which should be avoided.</p>  | <p>+</p> |
| <p><b>9. To protect and enhance the built environment and natural environment</b></p> | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>The site is located within the Barry Marine Conservation Area and the Management Plan and Appraisal recognise the economic pressures on the current fairground and the potential that the site has for future redevelopment and the impact that this will have on the character and appearance of the conservation area. Notwithstanding this, its proposed use for 'tourism' related activities is considered appropriate and could offer an opportunity to enhance the conservation area.</p> <p>The management plan also recognises that the future potential redevelopment of the site will have a significant impact on the character and appearance of the adjacent area and that it's proposed use for 'tourism' related activities is considered appropriate and could offer an opportunity to enhance the conservation area. The management plan identifies "positive building" that contributes to the CA. In accordance with Government guidance contained within Circular 61/96, the Council will adopt a general presumption against the demolition of 'positive' buildings with proposals to demolish such buildings assessed against the same broad criteria as proposals to</p> | <p>+</p> |

|  |   |   |   |
|--|---|---|---|
|  |   | <p>demolish listed buildings. Any application for the demolition of a positive building will therefore need to be justified as to why the building should not be retained. In addition the amusement park has an historic association with Barry Island. Beneficial impact assumed based on improvements.</p> <p>The development as proposed will not impact upon an international, national or local ecological designation.</p>   |   |
| <b>10. To provide a high quality environment within all new developments</b>   | The development has the potential to support high quality public realm.   | Given the scale and range of uses of the proposed development there is significant potential for the proposal to embrace high standards of design and to develop a high quality public environment both with the development and within the external public spaces.   | + |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area). | <p>The site is located within the Barry Marine Conservation Area and the Management Plan and Appraisal recognise the economic pressures on the current fairground and the potential that the site has for future redevelopment and the impact that this will have on the character and appearance of the conservation area. Notwithstanding this, its proposed use for 'tourism' related activities is considered appropriate and could offer an opportunity to enhance the conservation area.</p> <p>The management plan identifies "positive building" that contributes to the CA. |   |   | <p>therefore need to be justified as to why the building should not be retained. In addition the amusement park has an historic association with Barry Island. Beneficial impact assumed based on improvements.</p> <p>The development as proposed will not impact upon an international, national or local ecological designation.</p>  |           |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b> | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p> | <p>The site is located at the heart of Barry Island a traditional tourist destination. As a result, the area is well served by public transport with regular rail and bus services operating in close proximity to the site. Barry Island is easily accessible by foot from the main town and while there is little by way of cycling infrastructure, the area offers significant potential to develop new routes e.g. Barry Island Causeway. Secondary phases at Barry Waterfront will significantly improve access to Barry Island and will include additional sustainable transport facilities e.g. new walking and cycling infrastructure.</p> | <b>++</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>                     | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>                           | <p>Development as proposed would result in job losses associated with the amusement park, however the seasonal nature of these positions is likely to be more than compensated for by the range of facilities being promoted within the new mixed use development.</p> <p>The site would not result in a loss of an allocated employment site.</p>   | <b>+</b>  |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b>   | <p>The site is located either within a centre, edge of centre or an out of town location.</p>   | <p>The site is not located within an existing town or district centre however it is within close proximity to tourist related retail outlets, bars and cafes and would provide additional attractions that would help sustain the viability of the tourist centre at Barry Island. Notwithstanding this, additional residential apartments of the scale proposed are likely to</p>   | <b>+</b>  |

|   |  |  |           |
|---|--|--|-----------|
|   |  | result in additional convenience shopping expenditure within the local area whether that be the town centre of Barry Waterfront.   |           |
| <b>15. To promote appropriate tourism</b> | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility. | While the proposal identifies circa 240 residential apartments it also includes additional recreational/tourist related development which would enhance the tourism offer available at Barry Island. | <b>++</b> |

### Effect Summary Table

| <b>++</b> | <b>+</b> | <b>0</b> | <b>-</b> | <b>--</b> | <b>+/-</b> | <b>?</b> |
|-----------|----------|----------|----------|-----------|------------|----------|
| <b>6</b>  | <b>8</b> | <b>0</b> | <b>0</b> | <b>1</b>  | <b>0</b>   | <b>0</b> |

### SA Summary Comments

The site is within the Barry Marine Conservation Area but has not been identified as a positive element within this designation and improvements/redevelopment for tourist related activities would be welcomed. The loss of existing uses and local employment is of concern but their replacement with modern facilities and jobs would compensate for this loss. The site is well served by sustainable transport which could serve the needs of the future residents. Given the scale of the proposal there is further potential to enhance local transport services and still further benefits could result from the continued development proposals at Barry Waterfront. The primary issue relating to the conservation area would be the scale of the residential apartments proposed and the visual impact that would result. Other issues relating to the CA could be resolved at the later planning application stages.

This proposal returns strong positive scores against the sustainability objectives given that it is in a sustainable location and that the site has been promoted for a mixed use development the elements of which would enhance the tourist facilities available at Barry Island.

## SA Assessment Criteria: Land at White Farm, Barry

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have positive and negative impacts upon sustainability   | +/-    |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |

| Sustainability Objective  | Appraisal guidance notes:  | Assessment Criteria  | Effect |
|---|--|--|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study.</p> | The site has been promoted for housing and would provide a minimum of 20% affordable housing.                            | ++     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>   | The site has been promoted for residential use and would incorporate a significant element (7.4 hectares) of open space. | +      |
| <b>3. To maintain and improve access for all</b>                            | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.  | The site is centrally located within the town of Barry and would be accessible by sustainable means.                     | ++     |

|   |  |  |          |
|---|--|--|----------|
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.  | Minor positive impact on multiple deprivation given the provision of housing, including affordable housing, and accessible open space within Barry.  | <b>+</b> |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.  | Development of this site would not lead to coalescence.<br><br>The proposal would not result in the loss of recreational or community facilities.  | <b>0</b> |
| <b>6. SA Summary Comments

Development of the site would meet local housing needs, including provision of affordable housing. Although development of the site would increase the need to travel locally, it is located within the centre of Barry and would be accessible by sustainable transport. In addition, the proposed site also includes retention of a significant amount of open space. This results in a generally positive assessment with 7 positive scores overall. The negative effects result from the nature conservation impacts and loss of some informal open space.

## SA Assessment: Land to the south west of Weycock cross SA

| <b>SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL</b>                    |  |  |               |

|   |  | Development at the site will have a positive impact on sustainability  | <b>++</b>     |
|   |  | Development at the site will have a some positive impact on sustainability   | <b>+</b>      |
|   |  | Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects.  | <b>0</b>      |
|   |  | Development will have both positive and negative impacts on sustainability   | <b>+/-</b>    |
|   |  | Development at the site will have a slight negative impact on the sustainability.  | <b>-</b>      |
|   |  | Development at the site will have a very negative impact on sustainability   | <b>--</b>     |
|   |  | The impact of an issue cannot be predicted at this stage   | <b>?</b>      |
| <b>Sustainability Objective</b>   | <b>Appraisal guidance notes:</b>   | <b>Assessment Criteria</b>   | <b>Effect</b> |
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study.</p> | The site has not been promoted for affordable housing. However, as a large residential site it has the potential to deliver a significant number of affordable housing units in an area where a significant need has been identified.  | <b>++</b>     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>   | <p>The site is not promoted for community, leisure or recreational facilities however as a substantial housing site it is likely to incorporate open space, play areas.</p> <p>The site is currently in agricultural use and would not result in the loss of a community facility.</p> <p>Given the scale of the proposed residential development there is likely to be potential for the provision of enhanced and/or new community facilities e.g. sustainable transport</p> | <b>+</b>      |

|   |   |  |           |
|---|---|--|-----------|
|   |   | measures, play areas.  |           |
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | <p>The site is located on the outskirts of Barry and is approximately 3 kilometres from the town's main retail centre and less than 2 kilometres from High Street district centre and Park Crescent local centre. The site is well located to access to local bus routes which operate regular services along Pontypridd Road to numerous locations within the Vale. Rail services are accessible from within the town and provide regular and easy access to Cardiff and Bridgend.</p> <p>Development as proposed could contribute to local sustainable transport improvements e.g. walking and cycling facilities.</p> | <b>++</b> |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.   | A positive impact on reducing the causes of deprivation given that the site has been promoted for housing and is likely to provide enhanced local facilities within an area ranked low against the indices of multiple deprivation.  | <b>+</b>  |
| <b>5. To maintain, protect and enhance community spirit</b>               | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>  | <p>The site is located within the Barry, Rhose and St Athan Green wedge UDP policy ENV 3 (v) refers and would therefore have a detrimental affect on the open nature of countryside on the outskirts of Barry.</p> <p>The proposal would not result in the loss of recreational or community facilities.</p>   | <b>-</b>  |
| <b>6. To minimise the causes and manage the effects of climate change</b> | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> <p>The site is capable of incorporating renewable energy sources or energy conservation measures.</p> | The site is located on the outskirts of Barry and is approximately 3 kilometres from the town's main retail centre and less than 2 kilometres from High Street district centre and Park Crescent local centre. The site is well located to access to local bus routes which operate regular services along Pontypridd Road to numerous locations within the Vale. Rail services are accessible from within the town and provide regular and easy access to Cardiff   | <b>++</b> |

|  |   |  |    |
|--|---|--|----|
|  |   | <p>and Bridgend. Development could contribute to further local sustainable transport improvements e.g. walking and cycling facilities.</p> <p>A narrow band of “less” surface water flooding has been identified across a small part of the site but this is unlikely to prejudice future development.</p> <p>Given the site is proposed for residential development there is scope for the incorporation of energy efficiency or renewable energy measures. Future residential properties would be required to comply with current energy efficiency standards.</p> |    |
| <b>7. To minimise waste</b>  | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).   | The proposed development will generate additional domestic waste and the site has not been promoted for new waste management facilities.   | -- |
| <b>8. To use land effectively and efficiently</b>                              | <p>The site is a brownfield site and / or involves the beneficial re-use of existing buildings.</p> <p>The site is capable of accommodating high density development</p>  | <p>The proposal would involve development of greenfield land which the 1966 Agricultural Land Classification Barry subdivision map of identifies as being of grade 3 quality.</p> <p>The site is capable of accommodating medium / low density development to reflect the character of the surrounding developments.</p>   | -  |
| <b>9. To protect and enhance the built environment and natural environment</b> | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>Development of the site as proposed would not directly impact upon a local, national or European ecological, archaeological or historic designations. However, the site is in close proximity to a number of such designations e.g. SINC, SLA, ancient woodlands. Although minimal, the combined risk to these designations is felt to warrant a –ve.</p> <p>The site is located within the Barry, Rhoose and St Athan Green wedge UDP policy ENV 3 (v) refers and would therefore have a</p>   | -- |

|  |   |   |           |
|--|---|---|-----------|
|  |   | detrimental affect on the open nature of countryside on the outskirts of Barry.   |           |
| <b>10. To provide a high quality environment within all new developments</b>   | The development has the potential to support high quality public realm.   | This is a substantial site and the potential therefore exists to develop a high quality public realm particularly along the northern boundary of the site that fronts Port Road.  | <b>++</b> |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area). | Development of the site as proposed would not directly impact upon a national or European ecological, archaeological or historic designations. However, the site is in close proximity to ancient woodlands. Although minimal, the combined risk to these designations is felt to warrant a –ve.  | <b>-</b>  |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | The site is well served by public transport and accessible by walking and cycling.<br><br>Services and facilities are easily accessible by a range of transport modes including walking and cycling.        | The site is located on the outskirts of Barry and is approximately 3 kilometres from the town's main retail centre and less than 2 kilometres from High Street district centre and Park Crescent local centre. The site is well located for access to local bus routes which operate regular services along Pontypridd Road to numerous locations within the Vale. Rail services are accessible from within the town and provide regular and easy access to Cardiff and Bridgend. Development could contribute to further local sustainable transport improvements e.g. walking and cycling facilities. | <b>++</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | The proposal is for new employment development<br><br>The site would not result in a loss of employment land that has been identified as having a continued economic role.                                  | The site has not been promoted for employment uses and would not result in a loss of employment land.   | <b>0</b>  |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b>                      | The site is located either within a centre, edge of centre or an out of town location.  | The site is located on the outskirts of Barry and is in close proximity to local, district and town retail centres. However given the relative scale of the proposed development to Barry, it is considered unlikely that any future development would have a noticeable affect upon the viability of any of these centres  | <b>+</b>  |

|   |  |  |          |
|---|--|--|----------|
|   |  | however a single +ve has been awarded.                                 |          |
| <b>15. To promote appropriate tourism</b> | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility. | The site has not been promoted for a new or enhanced tourism facility. | <b>0</b> |

### SA Summary Comments

This is a large green field site located on the outskirts of Barry. This is a prominent with an extensive frontage onto Port Road. The agricultural land classification identifies the land quality as Grade 3. Development would not impact upon any local, national or European sites of ecological, archaeological or historic interest. The site is well located to local bus services that provide easy access to the services and facilities available within the town centre.

Overall the site realises a positive assessment against the sustainability objectives with positive or neutral scores being realised against most of the objectives. Strong positive scores are realised by the sites location on the outskirts of Barry and the contribution to local housing and negative scores result from the loss of agricultural land, the production of waste and the impact upon local designations however this impact is marginal given that site does not directly affect any such designations. Negative scores have also been influenced by the impact that development would have upon the open nature of the countryside on the outskirts of Barry.

## SA Assessment: Land to the east of Pencoedre Lane, Barry SA

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development of the site would have positive and negative impacts upon sustainability  | +/-    |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |

| Sustainability Objective  | Appraisal guidance notes:  | Assessment Criteria   | Effect |
|---|--|---|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study.</p> | The site has not been promoted for affordable housing however, as a large residential site it has the potential to deliver affordable housing units in the Barry sub market area where the identified need is significant.  | ++     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>   | <p>The site is not promoted for community, leisure or recreational facilities.</p> <p>The site is currently in agricultural use although the Agricultural Land Classification indicates that the land is not the best and most versatile. The proposal would not result in the loss of a community facility but if developed as proposed, could result in additional local community enhancements/facilities e.g. improved sustainable transport links, that would enhance existing local facilities.</p> | +      |

|   |   |   |           |
|---|---|---|-----------|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | <p>The site is within the existing residential settlement boundary fro Barry and is located adjacent to the A4050 Port Road. Local buses operate regular services along Port Road which provide access to Barry, Cardiff and Llantwit Major. There are local footways and proposals for improved cycle infrastructure in the area. The nearest major convenience store is accessible on foot or by cycle although this is located approximately 2.5 kilometres away. Other convenience stores are located closer to the site however these are unlikely to provide for the regular needs of future residents and it is likely that the majority of trips form the site would be via private transport.</p> <p>Notwithstanding the above the services available within Barry (including additional sustainable transport) are extensive and any trips need not therefore be extensive.</p> | <b>++</b> |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.   | Minor positive impact on reducing causes of deprivation given its promotion for housing within an area that is in close proximity to wards that are ranked low in terms of multiple deprivation.  | <b>+</b>  |
| <b>5. To maintain, protect and enhance community spirit</b>               | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>  | <p>Development of this site would not lead to coalescence.</p> <p>The proposal would not result in the loss of recreational or community facilities.</p>  | <b>0</b>  |
| <b>6. To minimise the causes and manage the effects of climate change</b> | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> <p>The site is capable of incorporating renewable energy sources or energy conservation measures.</p> | <p>The site is within the existing residential settlement boundary fro Barry and is located adjacent to the A4050 Port Road. Local buses operate regular services along Port Road which provide access to Barry, Cardiff and Llantwit Major. There are local footways and proposals for improved cycle infrastructure in the area. The nearest major convenience store is accessible on foot or by cycle although this is located approximately 2.5 kilometres away.</p>  | <b>+</b>  |

|   |  |   |    |
|---|--|---|----|
|   |  | <p>Other convenience stores are located closer to the site however these are unlikely to provide for the regular needs of future residents and it is likely that the majority of trips from the site would be via private transport.</p> <p>Notwithstanding the above the services available within Barry (including additional sustainable transport) are varied and any trips need not therefore be extensive.</p> <p>The site is unaffected by flooding.</p> <p>Given the scale of the site there is the potential for the incorporation of energy efficiency and sustainable design measures. Houses would need to comply with current energy efficiency standards.</p> |    |
| <b>7. To minimise waste</b>                       | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).  | The site has been promoted for residential use and development as proposed would generate additional domestic waste.  | -- |
| <b>8. To use land effectively and efficiently</b> | <p>The site is a brownfield site and / or involves the beneficial re-use of existing buildings.</p> <p>The site is capable of accommodating high density development</p> | <p>This is a green field site that has been identified as being of grade 3 agricultural land value. Development of the site would represent an extension of the settlement edge into open countryside.</p> <p>The site is capable of high density development however given the character of the surrounding development and the local landscape characteristics this is unlikely to be appropriate if development were to proceed.</p>   | -  |

|  |   |   |   |
|--|---|---|---|
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>The site is in close proximity to a number of local ecological sites and ancient woodlands including the Barry Woodlands Site of Special Scientific Interest which encompasses Pencoedre Wood to the east. The CCW have expressed concerns over the impact that residential development would have on the ancient woodland (through increased recreational activity). Outline consent for residential development has already been granted on the majority of the site. The assessment has therefore been limited to a single –ve.</p> <p>The site is opposite the Duffryn Basin and Ridge Slopes Special Landscape Area however development as proposed would not impact upon this designation. A number of SINC sites have been identified close to the site but again development as proposed is not considered likely to impact upon these designations.</p> | - |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>Improvements to public realm are likely to be limited to within the site itself due to the nature and character of the surround built form.</p>  | + |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | <p>The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).</p>  | <p>The site is in close proximity to a number of local ecological sites and ancient woodlands including the Barry Woodlands Site of Special Scientific Interest which encompasses Pencoedre Wood to the east. The CCW have expressed concerns over the impact that residential development would have on the ancient woodland (through increased recreational activity). Outline consent for residential development has already been granted on the majority of the site. The assessment has therefore been limited to a single –ve.</p>   | - |

|   |   |   |          |
|---|---|---|----------|
|   |   | The site is opposite the Duffryn Basin and Ridge Slopes Special Landscape Area however development as proposed would not impact upon this designation. A number of SINC sites have been identified close to the site but again development as proposed is not considered likely to impact upon these designations.  |          |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b> | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p> | <p>The site is within the existing residential settlement boundary from Barry and is located adjacent to the A4050 Port Road. Local buses operate regular services along Port Road which provide access to Barry, Cardiff and Llantwit Major. There are local footways and proposals for improved cycle infrastructure in the area. The nearest major convenience store is accessible on foot or by cycle although this is located approximately 2.5 kilometres away. Other convenience stores are located closer to the site however these are unlikely to provide for the regular needs of future residents and it is likely that the majority of trips from the site would be via private transport.</p> <p>Notwithstanding the above the services available within Barry (including additional sustainable transport) are varied and any trips need not therefore be extensive.</p> | <b>+</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>                     | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>                           | The site has not been promoted for employment uses. The site was previously a UDP allocated employment site EMP1(11) Pencoedre Business Park (B1/B8) however the majority of this site has now been granted consent for residential development and it is questionable whether the remaining site area is sufficient to provide a meaningful contribution to future employment needs. This has therefore limited assessment to a single -ve.  | <b>-</b> |
| <b>14. To maintain and enhance the viability of</b>   | The site is located either within a centre, edge of centre or an out of town location.  | Although on the outskirts of Barry, the site is located in excess of 3 kilometres from the main   | <b>0</b> |

|   |  |  |   |
|---|--|--|---|
| the Vale's town, district and local centres |  | retail centre or district centres. Development as proposed would therefore do little to enhance the viability of the identified district or local centres. |   |
| 15. To promote appropriate tourism          | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility. | The development of the site would not realise a new or enhanced tourism facility.  | 0 |

### Effect Summary Table

| ++ | + | 0 | - | +/- | -- | ? |
|----|---|---|---|-----|----|---|
| 2  | 5 | 3 | 4 | 0   | 1  | 0 |

### SA Summary Comments

This site was a long standing employment allocation within the UDP however it has recently been granted planning consent for residential development leaving only a small element of the previous employment allocation. The site is in a relatively sustainable location on the outskirts of Barry adjacent to the main A4050 Port Road. While there are a number of local designations close to the site development would have little or no impact on these. However the CCW has expressed concern over the future impact that development would have on the Barry Woodland SSSI as a result of informal recreation.

Overall this is a positive assessment against the sustainability criteria the site scoring well due to its general location on the outskirts of Barry and the availability of local bus services. The main negative impacts of the proposal relate to the loss of agricultural land and the potential harm to the SSSI however, these have been limited to mainly single negative scores given that the site has already secured residential planning consent.

Houses would need to comply with current energy efficiency standards.</p> |    |
| <b>7. To minimise waste</b>                       | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).  | The site has been promoted for residential use and development as proposed would generate additional domestic waste.   | -- |
| <b>8. To use land effectively and efficiently</b> | <p>The site is a brownfield site and / or involves the beneficial re-use of existing buildings.</p> <p>The site is capable of accommodating high density development</p> | <p>This is a green field site that has been identified as being of grade 3 agricultural land value. Development of the site would represent an extension of the settlement edge into open countryside.</p> <p>The site is capable of high density development however given the character of the surrounding development and the local landscape characteristics this is unlikely to be appropriate if development were to proceed.</p>  | -  |

|  |   |  |   |
|--|---|--|---|
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>The site is in close proximity to a number of local ecological sites and ancient woodlands including the Barry Woodlands Site of Special Scientific Interest which encompasses Pencoedtre Wood to the east. The CCW have expressed concerns over the impact that residential development would have on the ancient woodland (through increased recreational activity). Outline consent for residential development has already been granted on the majority of the site. The assessment has therefore been limited to a single –ve.</p> <p>The site is opposite the Duffryn Basin and Ridge Slopes Special Landscape Area however development as proposed would not impact upon this designation. A number of SINC sites have been identified close to the site but again development as proposed is not considered likely to impact upon these designations.</p> | - |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>Improvements to public realm are likely to be limited to within the site itself due to the nature and character of the surround built form.</p>   | + |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | <p>The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).</p>  | <p>The site is in close proximity to a number of local ecological sites and ancient woodlands including the Barry Woodlands Site of Special Scientific Interest which encompasses Pencoedtre Wood to the east. The CCW have expressed concerns over the impact that residential development would have on the ancient woodland (through increased recreational activity). Outline consent for residential development has already been granted on the majority of the site. The assessment has therefore been limited to a single –ve.</p>   | - |

|   |   |   |          |
|---|---|---|----------|
|   |   | The site is opposite the Duffryn Basin and Ridge Slopes Special Landscape Area however development as proposed would not impact upon this designation. A number of SINC sites have been identified close to the site but again development as proposed is not considered likely to impact upon these designations.  |          |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b> | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p> | <p>The site is within the existing residential settlement boundary from Barry and is located adjacent to the A4050 Port Road. Local buses operate regular services along Port Road which provide access to Barry, Cardiff and Llantwit Major. There are local footways and proposals for improved cycle infrastructure in the area. The nearest major convenience store is accessible on foot or by cycle although this is located approximately 2.5 kilometres away. Other convenience stores are located closer to the site however these are unlikely to provide for the regular needs of future residents and it is likely that the majority of trips from the site would be via private transport.</p> <p>Notwithstanding the above the services available within Barry (including additional sustainable transport) are varied and any trips need not therefore be extensive.</p> | <b>+</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>                     | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>                           | The site has not been promoted for employment uses. The site was previously a UDP allocated employment site EMP1(11) Pencoedre Business Park (B1/B8) however the majority of this site has now been granted consent for residential development and it is questionable whether the remaining site area is sufficient to provide a meaningful contribution to future employment needs. This has therefore limited assessment to a single –ve.  | <b>-</b> |
| <b>14. To maintain and enhance the viability of</b>   | The site is located either within a centre, edge of centre or an out of town location.  | Although on the outskirts of Barry, the site is located in excess of 3 kilometres from the main   | <b>0</b> |

|   |  |  |          |
|---|--|--|----------|
| the Vale's town, district and local centres |  | retail centre or district centres. Development as proposed would therefore do little to enhance the viability of the identified district or local centres. |          |
| 15. To promote appropriate tourism          | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility. | The development of the site would not realise a new or enhanced tourism facility.  | <b>0</b> |

### Effect Summary Table

| ++ | + | 0 | - | +/- | -- | ? |
|----|---|---|---|-----|----|---|
| 2  | 5 | 3 | 4 | 0   | 1  | 0 |

### SA Summary Comments

This site was a long standing employment allocation within the UDP however it has recently been granted planning consent for residential development leaving only a small element of the previous employment allocation. The site is in a relatively sustainable location on the outskirts of Barry adjacent to the main A4050 Port Road. While there are a number of local designations close to the site development would have little or no impact on these. However the CCW has expressed concern over the future impact that development would have on the Barry Woodland SSSI as a result of informal recreation.

Overall this is a positive assessment against the sustainability criteria the site scoring well due to its general location on the outskirts of Barry and the availability of local bus services. The main negative impacts of the proposal relate to the loss of agricultural land and the potential harm to the SSSI however, these have been limited to mainly single negative scores given that the site has already secured residential planning consent.

## SA Assessment Criteria: Cowbridge Comprehensive Lower School, Town Mill Road, Cowbridge

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development will have positive and negative impacts upon sustainability.  | +/-    |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |

| Sustainability Objective  | Appraisal guidance notes:  | Assessment Criteria  | Effect |
|---|--|--|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study.</p> | The site has been promoted for residential development providing 45 dwellings with a minimum of 35% affordable housing.  | ++     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>   | The site is promoted for residential use on a former education site which is surplus to requirements. Therefore, development of the site would not result in the loss of a community facility. | +      |
| <b>3. To maintain and improve access for all</b>                            | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.  | The location of the site within the centre of Cowbridge provides for easy access to the town centre and the services and facilities that it offers.  | +      |

|   |  |  |           |
|---|--|--|-----------|
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.  | Development of the site would help to meet local housing needs including affordable housing resulting in a minor positive effect.  | <b>+</b>  |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.  | Development of the site would not lead to the coalescence of settlements and would not result in the loss of a recreational or community facility.   | <b>0</b>  |
| <b>6. To minimise the causes and manage the effects of climate change</b> | The site would not increase the need to travel and or increase travel distances<br><br>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources<br><br>The site is capable of incorporating renewable energy sources or energy conservation measures. | The location of the site within the centre of Cowbridge provides for easy access to the town centre and the services and facilities that it offers.<br><br>The majority of the site does not lie within an identified flood risk area for main river flooding however a small corner of the site to the south lies within a C flood zone.<br><br>As the site is promoted for residential use redevelopment of the site could incorporate renewable energy proposals. | <b>+</b>  |
| <b>7. To minimise waste</b>   | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).  | Development of the site would create additional residential waste.   | <b>-</b>  |
| <b>8. To use land effectively and efficiently</b>                         | The site is a brownfield site and / or involves the beneficial re-use of existing buildings.<br><br>The site is capable of accommodating high density development  | The site is brownfield and located within close proximity to the town centre.<br><br>Given the sites location it could accommodate high density development.   | <b>++</b> |

|  |   |  |              |
|--|---|--|--------------|
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>The site adjoins the Cowbridge Conservation area and is in close proximity to a number of listed buildings including the Grade II listed Rose Cottage, Boot House and Grade II* listed South Gate, also a scheduled ancient monument. Therefore, development proposals would need to be sensitively designed towards these important features.</p>  | <b>+ / -</b> |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>This brownfield site contains a number of disused school buildings and playground. Given its existing form, the site has the potential to improve the public realm.</p>   | <b>++</b>    |

### SA Summary Comments

This is a brownfield site located close to the main retail centre of Cowbridge and the range of services and facilities that the town provides. Development of the site would help to meet local housing needs and provide a minimum 35% affordable housing.

Overall this is a particularly positive assessment given the site is brownfield and currently vacant. Furthermore, the site is located within a sustainable location in close proximity to Cowbridge town centre. Other positive effects arise from local environmental / public realm improvements, meeting local housing needs and the potential contribution towards the viability of the town centre.

## SA Assessment Criteria: Cowbridge Cattle Market, the Butts, Cowbridge

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |

### SA Summary Comments

This is a brownfield site located close to the main retail centre of Cowbridge and the range of services and facilities that the town provides. Development of the site would help to meet local housing needs and provide a minimum 35% affordable housing.

Overall this is a positive assessment and while a number of negative or neutral scores are realised resulting from the loss of local employment. However, given that the existing employment use is unlikely to extend beyond March 2012 these negative elements are negligible and are outweighed by the more positive elements of the assessment e.g. the contribution that redevelopment of the site would have upon the character of the conservation area, local environmental improvements, meeting local housing needs and potential contribution towards the viability of the town centre.

SA Summary Comments

This 0.52 hectare site comprises the former Sixth form building on Aberthin Road to the north east of Cowbridge. The Victorian school building has some architectural merit and lends itself to conversion although it should be noted that the building is not listed. Conversion or redevelopment of the site could provide up to 15 dwellings and support 35% affordable housing.

Overall this is a particularly positive assessment given the site is brownfield and currently vacant. Furthermore, the site is located within a sustainable location in close proximity to Cowbridge town centre and access to public transport services. Other positive effects arise from local environmental / public realm improvements, meeting local housing needs and the potential contribution towards the viability of the town centre.

## SA Assessment: Land adjoining St Athan Road

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |
| Development at the site would have positive and negative impacts on sustainability  | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria  | Effect |
|---|---|--|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | <p>The site has been promoted for residential use. The site has the potential to deliver a significant number of Affordable Housing units in the Rural Vale housing submarket area which is an area identified in the LHMA with a need for affordable housing.</p> | ++     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | <p>The site is not promoted for these uses. The development of the site will not lead to a loss of a community facility. The potential exists for the site to contribute towards or provide additional facilities.</p>   | +      |

|   |   |  |          |
|---|---|--|----------|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | The site is within a reasonable distance of Cowbridge's town centre however it is unlikely that people would travel from the site to this service area by foot; resultantly car journeys would be generated.<br>The site is within walking/cycling distance of a bus stop. Cowbridge is served by the X2 V1 V2 V3 V4 V5 and V6 services which run to Cardiff, Bridgend, Llantwit Major and Rhoose.<br>Site access via Windmill Lane is very narrow and access via St Athan Road would be unsuitable. An alternative point of access is via Bessant Close in the Cul de Sac located on the sites northern boundary. | <b>+</b> |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.   | Minor impact on reducing the causes of deprivation, given its location and promotion solely for housing.   | <b>+</b> |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.   | The site would not lead to a coalescence of settlements or result in a loss in recreational land / a community facility.   | <b>0</b> |
| <b>6. To minimise the causes and manage the effects of climate change</b> | The site would not increase the need to travel and or increase travel distances<br><br>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources<br><br>The site is capable of incorporating renewable energy sources or energy conservation measures | The site is within walking/cycling distance of a bus stop.<br>Although within a reasonable distance of the town centre, it is unlikely that people would travel to these services by foot. Therefore development would increase the need to travel.<br>The site is not located within an area prone to flooding.<br>As the site is proposed for residential development there is scope for the incorporation of energy efficiency or renewable   | <b>+</b> |

|  |  |   |   |
|--|--|---|---|
|  |  | energy measures.  |   |
| <b>7. To minimise waste</b>  | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).  | The site would generate waste and does not promote waste management facilities.   | - |
| <b>8. To use land effectively and efficiently</b>                              | The site is a brownfield site and / or involves the beneficial re-use of existing buildings.<br><br>The site is capable of accommodating high density development  | It is a greenfield site and contains no existing buildings. The Agricultural Land Classification map 1986 identifies the site to have a mixture of grade 3b and 3c land.<br>The site would be capable of accommodating low to medium density development considering the character of surrounding dwellings and its rural location. | - |
| <b>9. To protect and enhance the built environment and natural environment</b> | The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.<br><br>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation. | The site does not lie within or adjacent to a conservation area, building or garden designated as having historic interest.<br>It falls within an area that has been identified to have landscape value.  | - |

|  |   |  |          |
|--|---|--|----------|
| <b>10. To provide a high quality environment within all new developments</b>   | The development has the potential to support high quality public realm.   | The potential exists, but its value would be limited due the sites location.   | <b>+</b> |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area). | The site is not located within a nationally or internationally designated ecological site and is therefore not affected.   | <b>0</b> |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | The site is well served by public transport and accessible by walking and cycling.<br><br>Services and facilities are easily accessible by a range of transport modes including walking and cycling.        | The site is accessible by foot and cycling. It is in close proximity to bus stops which provide links with other major service centres allowing access to wider services. The town centre of Cowbridge provides a wide range of services and is within walking distance of the site however car use is likely. | <b>+</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | The proposal is for new employment development<br><br>The site would not result in a loss of employment land that has been identified as having a continued economic role.                                  | Site is not promoted for employment and would not result in loss of employment land.   | <b>0</b> |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b>                      | The site is located either within a centre, edge of centre or an out of town location.  | The site is located approximately 1km away from Cowbridge town centre. The proposed development would have a minor positive effect on enhancing the viability of Cowbridge.  | <b>+</b> |
| <b>15. To promote appropriate tourism</b>  | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility.  | No tourism development proposed therefore no impact.   | <b>0</b> |

Effect Summary Table

| ++ | + | 0 | - | -- | +/- | ? |
|----|---|---|---|----|-----|---|
| 1  | 7 | 4 | 3 | 0  | 0   | 0 |

### SA Summary Comments

The site has a relatively high number of positive effects as Cowbridge is well served by public transport and is within walking/cycling distance of the existing town facilities. Due to its size the site has the potential to deliver a significant number of affordable dwellings in an area identified to have affordable housing need. Site access via Windmill Lane is very narrow and via St Athan Road would be unsuitable. An alternative site access is via Bessant Close in the Cul de Sac located on the sites northern boundary.

## SA Assessment Criteria: Plasnewydd Farm, Llantwit Major

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |
| Development at the site would have positive and negative impacts on sustainability  | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria  | Effect |
|---|---|--|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | <p>The site under consideration has not been promoted solely for Affordable Housing.</p> <p>Residential development provided the opportunity to secure affordable housing that would contribute to the identified need within the coastal housing market area.</p> | ++     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | <p>Development opportunities would provide the opportunity for enhanced or new community facilities.</p>   | ++     |

|   |  |  |     |
|---|--|--|-----|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.  | Llantwit Major District retail centre is approximately 900 metres walking distance from the site. There are currently no public transport facilities serving this site and pedestrian and cycling facilities are constrained towards the centre of Llantwit Major. Therefore accessibility by walking and cycling is considered to be limited at present.  | -   |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.  | Development of the site would contribute towards improving access to housing.  | +   |
| <b>5. To maintain, protect and enhance community spirit</b>               | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>   | Development of the site would not lead to a coalescence of settlements.  | 0   |
| <b>6. To minimise the causes and manage the effects of climate change</b> | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> <p>The site is capable of incorporating renewable energy sources or energy conservation measures</p> | <p>Llantwit Major District retail centre is approximately 900 metres walking distance from the site. There are currently no public transport facilities serving this site and pedestrian and cycling facilities are constrained towards the centre of Llantwit Major. However regular public transport services include rail park and ride is to be found within the centre of Llantwit Major.</p> <p>The site is not affected by flooding.</p> <p>New development will be required to meet existing energy efficiency standards. The site would also offer the potential for on site renewable energy generation.</p> | +/- |
| <b>7. To minimise waste</b>   | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).  | New development proposal will generate additional domestic waste.  | -   |

|  |   |   |            |
|--|---|---|------------|
| <b>8. To use land effectively and efficiently</b>  | <p>The site is a brownfield site and / or involves the beneficial re-use of existing buildings.</p> <p>The site is capable of accommodating high density development</p>  | The 1986 Agricultural Land Classification map indicates that the site is grade 2  | -          |
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | The site is not affected by any historic environment or nature conservation designations.   | <b>0</b>   |
| <b>10. To provide a high quality environment within all new developments</b>   | The development has the potential to support high quality public realm.   | Any development has the potential to support high quality public realm.   | <b>+</b>   |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).   | The site is not affected by any historic environment or nature conservation designations.   | <b>0</b>   |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p>   | Llantwit Major District retail centre is approximately 900 metres walking distance from the site. There are currently no public transport facilities serving this site and pedestrian and cycling facilities are constrained towards the centre of Llantwit Major. However regular public transport services include rail park and ride is to be found within the centre of Llantwit Major. | <b>+/-</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>   | The site is not being considered for employment.  | <b>0</b>   |

|---|--|--|----------|
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b> | The site is located either within a centre, edge of centre or an out of town location.                             | It is likely that residential development would assist in maintaining local services and facilities. | +        |
| <b>15. To promote appropriate tourism</b>   | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility. | The site is not being considered for a tourism related facility.                                     | <b>0</b> |

### Effect Summary Table

| ++ | + | 0 | - | -- | +/- | ? |
|----|---|---|---|----|-----|---|
| 2  | 3 | 5 | 3 | 0  | 2   | 0 |

### SA Summary Comments

The SA of the site realised relatively evenly dispersed sustainability scores. Positive impacts related to the potential for the site to deliver a range of housing types, and likelihood for any future development to support the enhancement of existing community facilities. However, being some 900 meters from the centre of Llantwit Major and presently limited accessibility by walking, cycling and public transport are the prime source of the negatives. +/- scores similarly relate to these issues, but recognising good accessibility by public transport is available within the centre of Llantwit Major. The neutral impacts highlight that the site not being affected by any built or nature conservation designations.

## SA Assessment: MG 2.15 Land to rear of Heol-y- Felin Estate SA

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development of the site would have positive and negative effects on sustainability.   | +/-    |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |

| Sustainability Objective  | Appraisal guidance notes:  | Assessment Criteria  | Effect |
|---|--|--|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study.</p> | <p>The site has not been promoted solely for Affordable Housing.</p> <p>The site has been promoted for residential development and therefore provides the opportunity to deliver affordable housing units that would contribute towards meeting the identified affordable housing need within the coastal housing market area.</p> | ++     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>   | <p>The site is not promoted for community, leisure or recreational facilities.</p> <p>Development would provide the opportunity to delivery new and enhanced community facilities.</p>   | ++     |

|   |  |  |     |
|---|--|--|-----|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.  | The candidate site adjoins existing residential development to the south of Llantwit Major. Nearest services and facilities are located some 800 metres away at Boverton and a 1km away within the centre of Llantwit Major. Public transport services are also found in these locations.  | +   |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.  | Residential development would provide the potential for residents to access housing locally.   | +   |
| <b>5. To maintain, protect and enhance community spirit</b>               | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>   | <p>The site is adjoins existing residential development and would not lead to coalescence.</p> <p>The proposal lies within the boundary of the Heritage Coast which has recreational value</p>   | -   |
| <b>6. To minimise the causes and manage the effects of climate change</b> | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> <p>The site is capable of incorporating renewable energy sources or energy conservation measures</p> | <p>The provision of housing within Llantwit Major would provide residents access to local services and facilities. However it is also likely that residents also would need to travel elsewhere to access services and facilities and also employment.</p> <p>The EA has confirmed that the site partially lies within a C2 flood zone and is susceptible to surface water flooding (more).</p> <p>Development will be required to meet existing energy efficiency standards. Given the extent of the site, it is likely that the site would have the potential for on site renewable generation</p> | +/- |
| <b>7. To minimise waste</b>   | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).  | New development proposal will generate additional domestic waste.  | -   |

|  |   |  |    |
|--|---|--|----|
| <b>8. To use land effectively and efficiently</b>  | <p>The site is a brownfield site and / or involves the beneficial re-use of existing buildings.</p> <p>The site is capable of accommodating high density development</p>  | <p>The proposal would involve development of greenfield land, which the 1966 Agricultural Land Classification map indicates as being Grade 2 agricultural land.</p>  | -  |
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>The site lies in an elevated position within the Heritage Coast; development in this location may have a negative visual impact on the character of the Heritage Coast.</p>   | -- |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>It is likely that the site would provide high quality public realm, it is however unlikely that this would mitigate its impact on the heritage coast designation, and as such a neutral impact is realised.</p>   | 0  |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | <p>The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).</p>  | <p>The site is not affected by any built heritage designations.</p>  | 0  |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p>   | <p>The candidate site adjoins existing residential development to the south of Llantwit Major. Nearest services and facilities are located some 800 metres away at Boverton and a 1km away within the centre of Llantwit Major. Public transport services are also found in these locations.</p> | +  |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>   | <p>The site is not promoted for employment.</p>  | 0  |

|   |  |   |          |
|---|--|---|----------|
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b> | The site is located either within a centre, edge of centre or an out of town location.                             | It likely that development would assist in maintaining local services and facilities. | <b>+</b> |
| <b>15. To promote appropriate tourism</b>   | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility. | Development may have an impact on the Heritage Coast which is tourism asset.          | <b>-</b> |

| <b>2</b>  | <b>4</b> | <b>3</b> | <b>1</b>   | <b>4</b> | <b>1</b>  | <b>0</b> |

### SA Summary Comments

The assessment scored a high number of negatives which relate to the potential impact that development would have on the Heritage Coast and as a result of the site being partially affected by flooding and the loss of agricultural land. . Positive scores relate to the contribution which the proposal could have in providing housing and employment opportunities and the potential for residents to access services locally however these are significantly outweighed by the negatives identified.

## SA Assessment Criteria: Land at Fort Road, Lavernock

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |
| Development at the site would have positive and negative impacts on sustainability  | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria  | Effect |
|---|---|--|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | The site is under consideration for housing and as such would deliver a mix of housing types including affordable housing. Being a sizeable site it has the potential to deliver a number of Affordable Housing units in the Penarth Housing Market Area.  | ++     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | <p>The site is not under consideration for community, leisure or recreational facilities and its development would not result in the loss such a facility, the site being overgrown and not in use at present.</p> <p>Given the scale of the proposed residential development there is likely to be the potential to secure enhancements/new local facilities e.g. sustainable transport contribution etc.</p> | +      |

|   |   |   |          |
|---|---|---|----------|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | The site is located to the south of Penarth however the town's main retail and service centre is approximately 2.5 kilometres from the centre of the site. It is likely therefore that there would remain a propensity for future residents to utilise private transport over more sustainable means. Notwithstanding this, the area benefits from a number of walking and cycling routes and the development could contribute towards the development of new/improved routes e.g. coastal access and NCN88. Similarly the scale of the development could support the enhancement/extension of local bus services to serve the development.     | <b>+</b> |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.   | A limited positive impact on reducing the causes of deprivation given that the site has been promoted for housing and would result in additional affordable housing in an area of identified need, this however is negligible.  | <b>+</b> |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.   | Development of the site would not lead to coalescence of settlements however a new green wedge designation is under consideration for the remaining area between Penarth and Sully.   | <b>0</b> |
| <b>6. To minimise the causes and manage the effects of climate change</b> | The site would not increase the need to travel and or increase travel distances<br><br>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources<br><br>The site is capable of incorporating renewable energy sources or energy conservation measures | The site is located to the south of Penarth and future occupiers would be able to access the range and choice of services and facilities available within the town via public transport or walking and cycling however it is more likely that private transport will remain the primary mode of transport.<br><br>The site is unaffected by fluvial or tidal flooding and only small areas of surface water flooding in isolated areas affect the site.<br><br>The site is under consideration for residential development and it is considered that there would be limited opportunities for the incorporation of energy efficiency, renewable | <b>+</b> |

|  |  |  |          |
|--|--|--|----------|
|  |  | energy or sustainable development measures. Notwithstanding this, any future residential properties would be required to meet current energy efficiency standards associated with that use.  |          |
| <b>7. To minimise waste</b>  | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).  | The site is under consideration for residential uses and would therefore generate additional domestic waste. No new waste management facility has been proposed  | -        |
| <b>8. To use land effectively and efficiently</b>                              | The site is a brownfield site and / or involves the beneficial re-use of existing buildings.<br><br>The site is capable of accommodating high density development  | Development of the site would involve the loss of green field land with an agricultural land classification of 3b/c. Given the constraints present at the site future development is likely to be at low to medium densities and incorporate areas of public open space and/or suitable buffer zones.  | -        |
| <b>9. To protect and enhance the built environment and natural environment</b> | The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.<br><br>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation. | The site under consideration is located in close proximity (on the cliff above) to the Penarth Coast SSSI designation however it is not considered that development for residential purposes would have an adverse impact upon the site.<br><br>In addition, the site overlooks the Severn Estuary which includes the Severn Estuary Ramsar site and the Severn estuary Special Protection Area. However given the scale and location of the site it is unlikely that future development would have an adverse impact on these designations. Future development will need to have due regard to these designation and consultation with CCW will be essential.<br><br>An area of contaminated land has been identified in an old quarry site within the site under consideration however as low density development is under consideration it is likely that this can be appropriately incorporated into any future development. | <b>0</b> |

|  |   |   |          |
|--|---|---|----------|
| <b>10. To provide a high quality environment within all new developments</b>   | The development has the potential to support high quality public realm.   | Future development could support increased high quality public realm however the benefits of these are likely to be restricted to future residents.   | <b>0</b> |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area). | <p>The site under consideration is located in close proximity (on the cliff above) to the Penarth Coast SSSI designation however it is not considered that development for residential purposes would have an adverse impact upon the site.</p> <p>In addition, the site overlooks the Severn Estuary which includes the Severn Estuary Ramsar site and the Severn estuary Special Protection Area. However given the scale and location of the site it is unlikely that future development would have an adverse impact on these designations. Future development will need to have due regard to these designation and consultation with CCW will be essential.</p> | <b>0</b> |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p> | The site is located to the south of Penarth however the town's main retail and service centre is approximately 2.5 kilometres from the centre of the site. It is likely therefore that there would remain a propensity for future residents to utilise private transport over more sustainable means. Notwithstanding this, the area benefits from a number of walking and cycling routes and the development could contribute towards the development of new/improved routes e.g. coastal access and NCN88. Similarly the scale of the development could support the enhancement/extension of local bus services to serve the development.                           | <b>+</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic</p>                                 | The site is not under consideration for employment uses and no employment would be lost as a result of future development.  | <b>0</b> |

|   |  |   |          |
|---|--|---|----------|
|   | role.  |   |          |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b> | The site is located either within a centre, edge of centre or an out of town location.                             | The site is approximately 2.5 kilometres from the district retail centre of Penarth and a number of local retail centres identified within the town. However given the scale of the site it is unlikely that future development would be a major contributor to the local retail centres and the district centre is well established and any additional patronage would be minimal. | <b>0</b> |
| <b>15. To promote appropriate tourism</b>   | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility. | The site is not under consideration for tourist related uses.   | <b>0</b> |

### Effect Summary Table

| ++ | + | 0 | - | -- | + /- | ? |
|----|---|---|---|----|------|---|
| 1  | 5 | 7 | 2 | 0  | 0    | 0 |

### SA Summary Comments

The is a generally positive assessment against the sustainability objectives, with positive scores being generated by the location of the site close to the services and facilities within Penarth and the public transport available associated with the at settlement. Minor negative scores are associated with the loss of agricultural land and the generation of additional domestic waste. While a number of nationally designated sites have been identified close to the site, the site is elevated above these designations on a cliff top and it is unlikely that any adverse impact will result from any future development. The site under consideration includes and area of contaminated land however it is considered that this could be incorporated into any future development proposals.

## SA Assessment: Land adjoining St Josephs School SA

| <b>SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL</b>                    |  |   |               |
|---|--|---|---------------|
|   |  | <b>Assessment Criteria</b>  | <b>Effect</b> |
|   |  | Development at the site will have a positive impact on sustainability   | <b>++</b>     |
|   |  | Development at the site will have a some positive impact on sustainability  | <b>+</b>      |
|   |  | Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects.   | <b>0</b>      |
|   |  | Development at the site will have a slight negative impact on the sustainability.   | <b>-</b>      |
|   |  | Development at the site will have a very negative impact on sustainability  | <b>--</b>     |
|   |  | Development at the site will have both positive and negative impacts on sustainability  | <b>+/-</b>    |
|   |  | The impact of an issue cannot be predicted at this stage  | <b>?</b>      |
| <b>Sustainability Objective</b>   | <b>Appraisal guidance notes:</b>   | <b>Assessment Criteria</b>  | <b>Effect</b> |
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study.</p> | The site has not been promoted for Affordable Housing. However, as a sizeable residential site it has the potential to deliver a number of Affordable Housing units in the Penarth Housing Market Area.   | <b>++</b>     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>   | <p>The site is not promoted for community, leisure or recreational facilities and its development would not result in the loss such a facility, the site being overgrown and not in use at present.</p> <p>Given the scale of the proposed residential development there is likely to be the potential to secure enhancements/new local facilities e.g. sustainable transport contribution etc.</p> | <b>+</b>      |

|   |   |  |   |
|---|---|--|---|
| <b>3. To maintain and improve access for all</b>            | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | <p>The site is located on the edge of Penarth approximately 2 kilometres from the main retail centre of the town. While the primary access to the site is via Sully Road local PROW provide for access to the main core of the town and the services and facilities of the town centre. Local improvements to the footway/cycleway network are proposed which would further improve access and the development of the site could further contribute to this work. Local bus services are available along the main transport corridors within Penarth and the site is approximately 2 kilometres from 2 no. railway stations.</p> <p>The site is located adjacent to an area of open space close to Myrtle Close and development could allow for improved walking/cycling links that would further enhance access to Penarth.</p> <p>Development of the site could contribute to local congestion particularly that associated with the schools in close proximity to the site.</p> | + |
| <b>4. Reduce the causes of deprivation</b>                  | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation. | A limited positive impact on reducing the causes of deprivation given that the site has been promoted for housing and would result in additional affordable housing in an area of identified need, this however is negligible.   | + |
| <b>5. To maintain, protect and enhance community spirit</b> | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>  | <p>The site is located within the existing green wedge designation and while not directly leading to the coalescence of the settlements of Dinas Powys and Penarth, its development would impact upon the general openness of the surrounding area and further encroach into the very narrow strip of countryside between the two settlements which is less than 275 metres in places.</p> <p>The development of the site would not result in the loss of any recreational or community</p>  | - |

|   |   |  |          |
|---|---|--|----------|
|   |   | facilities.  |          |
| <b>6. To minimise the causes and manage the effects of climate change</b> | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> <p>The site is capable of incorporating renewable energy sources or energy conservation measures.</p> | <p>Local services and facilities are accessible from the site by sustainable transport modes. Frequent bus and train services are available from various locations within Penarth town centre that provide sustainable access to larger service centres such as Barry and Cardiff. However there is still a strong likelihood that the majority of trips from the site, particularly for employment and convenience shopping would remain via private transport.</p> <p>The site is located adjacent to an area of open space close to Myrtle Close and development could allow for improved walking/cycling links that would further enhance access to Penarth.</p> <p>Certain parts of the site, particularly around the south boundary are susceptible to surface water flooding although this is not thought to be of an extent that would prohibit development.</p> <p>Given the site is proposed for residential development there is scope for the incorporation of energy efficiency, renewable energy or sustainable design measures. However residential development will be required to meet current energy efficiency standards.</p> | <b>+</b> |
| <b>7. To minimise waste</b>   | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).   | The proposed development will generate additional domestic waste.  | <b>-</b> |

|  |   |  |   |
|--|---|--|---|
| <b>8. To use land effectively and efficiently</b>                              | <p>The site is a brownfield site and / or involves the beneficial re-use of existing buildings.</p> <p>The site is capable of accommodating high density development</p>  | <p>The proposal would involve development on green field land which the 1979 Agricultural Land Classification south Glamorgan Sub-Division map indicates as being of Grade 3c, not the best or most versatile agricultural land.</p> <p>The site is capable of accommodating medium / low density development to reflect the character of the surrounding development.</p>   | - |
| <b>9. To protect and enhance the built environment and natural environment</b> | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>The site is not affected by any specific historic, conservation or ecological designations however there is the potential for the site to have biodiversity value and to support local ecology which would be lost if it were to be developed. The site is in close proximity (400m) of the site of the deserted Cosmeston Medieval Village.</p> <p>While the site does not lie within an area considered to be of landscape importance its development would be an extension of the built form into the countryside and the existing green wedge designation.</p> <p>A linear TPO is crosses the southern boundary of the site although this is not likely to be a significant issue for the sites development. No European, national or other local ecological designations apply to this site.</p> | - |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>The site has the potential to develop a high quality public realm although this is likely to be limited and of benefit only to future residents of any development given that the site is somewhat divorced from the existing elements of the settlement.</p>   | + |

|  |   |   |          |
|--|---|---|----------|
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area). | The site is not located within or adjoining any specific designation.   | <b>0</b> |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p> | <p>Local services and facilities are accessible from the site by sustainable transport modes. Frequent bus and train services are also available from various locations within the town centre which provide sustainable access to larger service centres.</p> <p>The site is located adjacent to an area of open space close to Myrtle Close and development could allow for improved walking/cycling links that would further enhance access to Penarth.</p> <p>However there is still a strong likelihood that the majority of trips from the site, particularly for employment and convenience shopping would remain via private transport.</p> | <b>+</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>                           | The proposed development is not for an employment use and would not result in a loss of employment land.  | <b>0</b> |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b>                      | The site is located either within a centre, edge of centre or an out of town location.  | The site is located on the edge of Penarth approximately 2 kilometres from the main retail centre of the town centre. While the primary access to the site is via Sully Road local PROW do provide for access to the main core of the town and the services and facilities within the town centre. Notwithstanding this, the scale of any development would have little bearing upon maintaining the viability of the services within the town. The site is also located close to Dinas Powys although future residents are   | <b>0</b> |

|   |  |  |          |
|---|--|--|----------|
|   |  | more likely to access the wider range and choice of facilities within Penarth. |          |
| <b>15. To promote appropriate tourism</b> | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility. | The site has not been promoted for tourism uses.                               | <b>0</b> |

### Effect Summary Table

| ++ | + | 0 | - | +/- | -- | ? |
|----|---|---|---|-----|----|---|
| 1  | 6 | 4 | 4 | 0   | 0  | 0 |

### SA Summary Comments

The site lies on the western edge of Penarth and is within the existing green wedge designation. While direct access is restricted a local PROW provides access to the town and the services and facilities that are available. The site is unaffected by any local or national ecological, conservation or archaeological designations however there is a linear TPO present at the south of the site but this would not restrict future development. The site is affected by minor surface water flooding but again this is limited and unlikely to be of a concern. The site is located within the current green wedge designation and while its development would not in itself result in the coalescence of the two settlements of Dinas Powys and Penarth, there would be a loss of an open area on the outskirts of the town although the nature of the locality is such that the impact of development would be reduced. Sully Road would form a permanent and defensible boundary to the green wedge.

Assessment of this site against the sustainability objectives results in appositve outcome.

## SA Assessment: Headlands School, Penarth

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| Development at the site will have a positive and a negative impact on sustainability  | +/-    |
| The impact of an issue cannot be predicted at this stage  | ?      |

| Sustainability Objective  | Appraisal guidance notes:  | Assessment Criteria   | Effect |
|---|--|---|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study.</p> | <p>The site is approximately 2.27 hectares and has the potential to deliver a mix of housing types including affordable housing in a housing market area identified as requiring substantial additional affordable housing over the plan period.</p>  | ++     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>   | <p>The site has not been promoted for these uses.</p> <p>Development of the site for housing would result in the loss of a residential special school catering for children with autism/special needs however the proposer has advised that the buildings and site are not ideal for their current use. The school grounds provide considerable local amenity and include recreational and sports facilities although it is not known whether these are accessible to the general public.</p> | --     |

|   |   |   |           |
|---|---|---|-----------|
|   |   | Given the likely scale/density of the proposed residential development there is likely to be scope to secure improvements to or new local community facilities e.g. improved cycle/footways within the vicinity of the site.  |           |
| <b>3. To maintain and improve access for all</b>            | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | <p>The site is located in close proximity to Penarth town centre (less than 1km) and the range and choice of facilities that it offers are easily accessible by walking, cycling and public transport. Given the previous use of the site good vehicular access already exists.</p> <p>Development of the site for residential purposes could contribute to localised congestion within the town.</p> <p>Given the scale of the site there would be scope to seek sustainable transport improvements via developer contributions related to the site.</p> | <b>++</b> |
| <b>4. Reduce the causes of deprivation</b>                  | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation. | <p>Minor positive impact on reducing the causes of deprivation given that the site is promoted for housing within an area with relatively low multiple deprivation.</p> <p>Development of the site for residential use would contribute to providing affordable housing units within an area of need and may result in improvements to the local environment.</p>   | <b>+</b>  |
| <b>5. To maintain, protect and enhance community spirit</b> | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>  | <p>The site is located within the urban area of Penarth and therefore development would not lead to coalescence.</p> <p>The development proposal would result in the loss of a residential special school (not ideal for current use) and its associated recreational facilities that provide significant local amenity value.</p>  | <b>-</b>  |

|   |   |   |           |
|---|---|---|-----------|
| <b>6. To minimise the causes and manage the effects of climate change</b> | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> <p>The site is capable of incorporating renewable energy sources or energy conservation measures.</p> | <p>The site is located on the outskirts of Penarth Town Centre and future occupiers would be able to access that range and choice of services and facilities available within the town via public transport or walking and cycling.</p> <p>The site is not affected by flooding.</p> <p>Given the site has been proposed for residential development there will be limited scope for the incorporation of energy efficiency, renewable energy or sustainable development measures. However residential development will be required to meet current energy efficiency standards.</p>  | <b>++</b> |
| <b>7. To minimise waste</b>   | <p>The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).</p>  | <p>The development of residential properties would generate additional domestic waste.</p>  | <b>-</b>  |
| <b>8. To use land effectively and efficiently</b>                         | <p>The site is a brownfield site and / or involves the beneficial re-use of existing buildings.</p> <p>The site is capable of accommodating high density development</p>  | <p>The proposal would involve development of a brownfield (still utilised as a special needs school) site that houses a number of buildings/structures although the site includes a large area of open ground, recreational and sports facilities which forms a part of the school external grounds. The proposer has advised that the site and structures are not ideally suited to their current function. Much of this space affords considerable local amenity and should be protected/incorporated into any future development where possible.</p> <p>The site is capable of accommodating Medium / low density development although this could be bolstered by the conversion of the listed building.</p> | <b>+</b>  |

|   |   |   |          |
|---|---|---|----------|
| <p><b>9. To protect and enhance the built environment and natural environment</b></p> | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>The majority of the site lies outside the Penarth conservation area however the element of the site fronting Paget Place is located within the CA. This part of the site includes the Grade 2 listed Headlands School building The building is included in the 2006 Buildings at Risk Survey as “to be monitored” and is considered to be capable of sensitive conversion to residential use. Development of the site is unlikely to have a significant detrimental impact upon the CA and would improve the listed building.</p> <p>Given the current circumstances of the buildings at the site there may be an impact upon local habitats e.g. bats, and these should be further explored.</p> <p>A number of tree preservation orders are located within the site although these are not likely to hinder future development.</p> <p>The site is located on top of a cliff overlooking the Severn Estuary which includes the Severn Estuary Ramsar site and Special Protection Area. Future development will need to have due regard to this designation and consultation with CCW will be required.</p> | <p>+</p> |
| <p><b>10. To provide a high quality environment within all new developments</b></p>   | <p>The development has the potential to support high quality public realm.</p>  | <p>The proposal involves the redevelopment of a 2.2 hectare site and the potential therefore exists to develop a high quality environment within the new development although the benefits of this would be largely limited to future residents. There is the potential to provide additional local enhancements via s106. A large part of the current site affords considerable local amenity.</p>   | <p>+</p> |

|  |   |  |           |
|--|---|--|-----------|
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area). | The majority of the site lies outside the Penarth conservation area however the element of the site fronting Paget Place is located within the CA. This part of the site includes the Grade 2 listed Headlands School building The building is included in the 2006 Buildings at Risk Survey as "to be monitored" and is considered to be capable of sensitive conversion to residential use and its improvement would greatly enhance local amenity.<br><br>Development of the site is unlikely to have a significant detrimental impact upon the CA and would improve the listed building. | <b>+</b>  |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | The site is well served by public transport and accessible by walking and cycling.<br><br>Services and facilities are easily accessible by a range of transport modes including walking and cycling.        | The site is located in close proximity to Penarth town centre (less than 1km) and the range and choice of facilities that it offers are accessible from the site by walking, cycling and public transport.   | <b>++</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | The proposal is for new employment development<br><br>The site would not result in a loss of employment land that has been identified as having a continued economic role.                                  | The site is proposed for residential use not employment. Were the site to be developed the existing school would be redeveloped and the specialist skills associated with that use would be lost.  | <b>-</b>  |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b>                      | The site is located either within a centre, edge of centre or an out of town location.  | The site is located within walking distance (less than 1 km) of Penarth Town centre and future residents would likely support local shops and services with their patronage. However given the scale of the development to Penarth as a whole this additional patronage would be negligible.<br><br>A large convenience retailer is located nearby in Penarth Haven however given the local topography it is likely that any trips to this location would be by private transport.   | <b>+</b>  |
| <b>15. To promote appropriate tourism</b>  | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility.  | The development proposed is not for a new or an enhanced tourism facility.   | <b>0</b>  |

Effect Summary Table

| ++ | + | 0 | - | +/- | -- | ? |
|----|---|---|---|-----|----|---|
| 4  | 6 | 1 | 3 | 0   | 1  | 0 |

SA Summary Comments

The site is located on the outskirts of Penarth town centre (less than 1km) and the services and facilities that it affords are easily accessible via walking or cycling or public transport. A large convenience retailer is also located nearby in Penarth Haven however given the local topography it is likely that any trips to this location would be by private transport. Development of the site is not likely to impact adversely on local conservation designations and could contribute to local environmental and/or service improvements. While located in close proximity to a national ecological designation it is unlikely that development of the site would result in detrimental impact. Loss of existing special school however the candidate site submission advises that the site and the facilities are not ideally suited to their current uses. Development of this site is would help to meet the housing needs within the Penarth area.

Overall, this site scores well in relation to the sustainability objectives and provided certain issues are addressed development of the site would deliver a residential development on a brown field site within a key service centre in a sustainable location which would provide the necessary renovation of a Grade II listed building.

## SA Assessment Criteria: St Cyres Land at and adjoining St Cyres School, Murch Road

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |
| Development at the site would have positive and negative impacts on sustainability  | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria  | Effect |
|---|---|--|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | The site has not been considered for Affordable Housing. However, as a residential site it has the potential to deliver Affordable Housing within the Penarth submarket housing area.  | +      |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | <p>The site is being considered for residential use.</p> <p>The proposal would lead to the loss of a community use; St Cyres Comprehensive School and its adjacent playing field and tennis courts. The size of the site would provide the potential to provide additional community facilities that would serve the local area.</p> | +/-    |

|   |   |  |            |
|---|---|--|------------|
| <b>3. To maintain and improve access for all</b>            | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | <p>This site is located on the eastern side of Dinas Powys. Existing housing is located to the north and west of the site and open countryside to the south and east. Appropriate access to the site is available by use of existing roads the previously served to access the school site. The site is within walking and cycling distance of existing services and facilities within Dinas Powys with the neighbourhood centres of Camms Corner and Castle Court being located roughly 600-700m from the site.</p> <p>Dinas Powys is well served by public transport services by virtue of its location on a railway line and strategic highway. The site is close to existing public transport provisions which are within walking/cycling distance; the nearest bus stop is approximately 650m away, and Eastbrook and Dinas Powys railway stations are both located around 1.5km away.</p> <p>As the site is very large and rural the accessibility to existing services and facilities is limited to areas that lie adjacent to Dinas Powys residential settlement boundary.</p> | <b>++</b>  |
| <b>4. Reduce the causes of deprivation</b>                  | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation. | Limited impact on reducing the causes of deprivation given that the site is being considered for housing within an area with relatively low multiple deprivation.  | <b>0</b>   |
| <b>5. To maintain, protect and enhance community spirit</b> | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>  | <p>This site lies within a sensitive part of open undeveloped countryside between Dinas Powys and Penarth. It is considered that development of this site on its own would not lead to the coalescence of settlements as it is not located within the narrowest part of this important green corridor.</p> <p>Development of this site would result in a loss of a community facility; St Cyres</p>  | <b>+/-</b> |

|  |  |   |            |
|--|--|---|------------|
|  |  | Comprehensive School, however the development proposal does include an area of public open space.   |            |
| <b>6. To minimise the causes and manage the effects of climate change</b>      | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> <p>The site is capable of incorporating renewable energy sources or energy conservation measures</p> | <p>The site is within walking and cycling distance of existing services and facilities. Dinas Powys is well served by public transport services by virtue of its location on a railway line and strategic highway. There is an existing bus stop within walking distance of the site and Dinas Powys Railway Station can be accessed via foot or cycle.</p> <p>The site has no identified flooding issues. Given the site is proposed for residential development there is scope for the incorporation of energy efficiency or renewable energy measures.</p> | <b>++</b>  |
| <b>7. To minimise waste</b>  | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).  | The site is being considered for residential uses and would therefore generate additional domestic waste.   | <b>--</b>  |
| <b>8. To use land effectively and efficiently</b>                              | <p>The site is a brownfield site and / or involves the beneficial re-use of existing buildings.</p> <p>The site is capable of accommodating high density development</p>   | <p>The site is brown field and involves the re-use of St Cyres Comprehensive School and its adjacent playing fields and tennis courts.</p> <p>The Agricultural Land Classification map 1966 identifies a large part of the site as Grade 3 agricultural land.</p> <p>The site is capable of accommodating medium density development to reflect the character of the existing surrounding development.</p>  | <b>+/-</b> |
| <b>9. To protect and enhance the built environment and natural environment</b> | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p>  | A small area to the north-west of the site is covered by TPO's, any development on the site must therefore respect the protection of the existing trees. A protected species, Pipistrellus, is located within or adjacent to the site, therefore the proposal will have a negative effect on the biodiversity of the land. A large part of the site is considered to be undeveloped   | <b>--</b>  |

|  |   |  |           |
|--|---|--|-----------|
|  |   | countryside outside the settlement boundary and development may have negative landscape and biodiversity impacts. However some elements of the site comprise logical extensions and infilling of the existing settlement.  |           |
| <b>10. To provide a high quality environment within all new developments</b>   | The development has the potential to support high quality public realm.   | The site has potential to develop a high quality public realm, although this is likely to be limited to future residents of the site.  | <b>+</b>  |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area). | The site is not located within or adjoining to any of these environmental, cultural or heritage designations.  | <b>0</b>  |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | The site is well served by public transport and accessible by walking and cycling.<br><br>Services and facilities are easily accessible by a range of transport modes including walking and cycling.        | The site is within walking and cycling distance of existing bus stops and Dinas Powys Railway Station. Dinas Powys is well served by buses to Cardiff and Bridgend with services almost every hour from 07.30 till 20.00 Monday to Saturday with slight changes to Sunday Service. Train services are frequent, running every 15 minutes Monday to Saturday from 05.30 till 23.30, and every half an hour on a Sunday. Local neighbourhood centres, Camms Corner and Castle Close are located within walking/cycling distance approximately 600-700m away. | <b>++</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | The proposal is for new employment development<br><br>The site would not result in a loss of employment land that has been identified as having a continued economic role.                                  | The site is not being considered for employment uses and would not result in a loss of employment land.  | <b>0</b>  |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b>                      | The site is located either within a centre, edge of centre or an out of town location.  | The site is located within walking / cycling distance of 2 neighbourhood retail centres (Castle Court / the Parade and Camms Corner).  | <b>+</b>  |

|   |  |  |          |
|---|--|--|----------|
| <b>15. To promote appropriate tourism</b> | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility. | The site is not being considered for new or enhanced tourism facilities. | <b>0</b> |
|---|--|--|----------|

### Effect Summary Table

| ++ | + | 0 | - | -- | +/- | ? |
|----|---|---|---|----|-----|---|
| 3  | 3 | 4 | 0 | 2  | 3   | 0 |

### SA Summary Comments

This site under consideration is located on the eastern site of Dinas Powys and comprises large areas of open countryside and an existing comprehensive school. Existing housing is located to the north and west of the site and open countryside surrounds the remaining area. Appropriate access to the site is available by use of existing roads that provided access to the school site and local housing.

Existing services and facilities are within walking/cycling distance of the site; the local service centres of Camms Corner and Castle Court are located approximately 600-700m away. Dinas Powys is well served by public transport services by virtue of its location on a railway line and strategic highway. The 89A/B and the 93 bus services serve the closest bus stop to the site and the train stations of Dinas Powys and Eastbrook are both approximately 1.5km away.

Development would result in the re-use of a brown field site as the site includes St Cyres Comprehensive School and its adjacent playing fields and tennis courts as well as the loss of grade 3 agricultural land. TPOs cover a small area of the site therefore any development must respect the protection of the existing trees. The site lies within an area classified as a sensitive part of undeveloped open countryside between Dinas Powys and Penarth, however it is considered that development of this site on its own would not lead to the coalescence of settlements. This is largely positive assessment which is primarily derived from the sites location in close proximity to the services and facilities available within Dinas Powys.

## SA Assessment: Land off Caerleon Road, Dinas Powys

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| Development at the site will have a positive and negative impact on sustainability  | +/-    |
| The impact of an issue cannot be predicted at this stage  | ?      |

| Sustainability Objective  | Appraisal guidance notes:  | Assessment Criteria  | Effect |
|---|--|--|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study.</p> | <p>The site has not been promoted for Affordable Housing. However, as a relatively large residential site it has the potential to deliver Affordable Housing within the Penarth submarket housing area.</p>  | ++     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>   | <p>The site is promoted for residential development and not community, leisure or recreational facilities.</p> <p>The southern part of the site is currently allocated for playing fields in the adopted UDP under Policy REC 5 (i). However, given that this recreational allocation has not been implemented the proposed development would not result in the loss of an existing recreational facility.</p> | + / -  |

|   |   |   |           |
|---|---|---|-----------|
|   |   | There may be the potential for the provision of enhanced / new community facilities from developer contributions related to the site.   |           |
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | <p>This triangular site is located on the eastern side of Dinas Powys. It is bounded by the railway line to the north, existing housing to the south and open countryside to the east. The site is within walking and cycling distance of existing services and facilities.</p> <p>Dinas Powys is well served by public transport services by virtue of its location on a railway line and strategic highway. There is an existing bus stop within walking distance of the site and Eastbrook Station can be accessed via a footbridge.</p> | <b>+</b>  |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.                       | Limited impact on reducing causes of deprivation given its promotion for housing within an area with relatively low multiple deprivation.   | <b>0</b>  |
| <b>5. To maintain, protect and enhance community spirit</b>               | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>  | <p>The development of this site would extend Dinas Powys to the north east. However, there would still be a substantial green buffer between Dinas Powys and Penarth. Accordingly it is considered that the development of this site would not result in coalescence.</p> <p>Redevelopment of the site would result in the loss of an existing UDP recreational allocation. However, as stated above this facility has not been implemented to date.</p>  | <b>+</b>  |
| <b>6. To minimise the causes and manage the effects of climate change</b> | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> | The site is within walking and cycling distance of existing services and facilities. Dinas Powys is well served by public transport services by virtue of its location on a railway line and strategic highway. SA Summary Comments

This site is located on the edge of the Dinas Powys village along Pen-y-turnpike road. Existing services and facilities could be accessible cycling however pedestrians would need to walk along a steep section of Pen-y-turnpike road with no pavement. However, it is noted that a separate, apparently disused and overgrown, path leads to the south west corner of the site which could be improved and utilised if developed.

Dinas Powys is well served by public transport services by virtue of its location on a railway line and strategic highway. The nearest bus service to the site is the 89A/B which runs from the Village Square, roughly 650 metres away, with 5 busses per day in each direction to Cardiff. The site is also located roughly 650 meters away from the two local retail centres in Dinas Powys.

This brownfield site scores a mixture of positive and negative results, although generally more positive effects. The positive results primarily relate to providing additional housing, including affordable housing, within an area of relatively high need in a generally sustainable location on what is a brownfield site. The negative effects arise from the loss of the children's care home as a community facility and potential site constraints and development impacts relating to protected trees, providing safe pedestrian access and limiting any overlooking and overbearing issues on neighbouring dwellings.

## SA Assessment: Land South of Llandough Hill-Penarth Road

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |

|   |   | <p>within any residential development.</p> <p>Given the scale of the proposed residential development there is likely to be potential for the provision of enhanced / new community facilities from developer contributions related to the site.</p>   |              |
| <b>3. To maintain and improve access for all</b>            | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | <p>The site is located close to the existing services and facilities within Llandough which would be accessible by walking or cycling to / from the site, particularly as the site lies adjacent to a recently upgraded shared walking and cycle path. Additionally, the area has the potential to link into cycle routes into Cardiff Bay and Cardiff city centre.</p> <p>Llandough is well served by public transport by virtue of its location close to the strategic highway network and Cardiff and Penarth. The area has five bus services (89A, 89B, X5, 95, X46) with one service providing 8 busses a day to / from Llantwit Major, Barry and Cardiff.</p> <p>Given the scale of the site there would be scope to seek walking, cycling and public transport improvements from developer contributions related to the site.</p> | <b>++</b>    |
| <b>4. Reduce the causes of deprivation</b>                  | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation. | Llandough its self is an area with relatively low multiple deprivation. However, there would be positive and negative effects on reducing causes of deprivation given that if developed the site would provide additional affordable housing within an area of relatively high need whilst realising negative impacts from the loss of informal open space.  | <b>+ / -</b> |
| <b>5. To maintain, protect and enhance community spirit</b> | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>  | The site is bounded by Llandough Hill road, Cogan Pill Road and Penarth Road. Although the site comprises a green buffer between development along Penarth road and the existing developed area of Llandough it is   | <b>+</b>     |

|  |   |   |          |
|--|---|---|----------|
|  |   | <p>surrounded by existing development including a primary school and dwellings to the north, west and south of the site.</p> <p>Furthermore, Penarth Road in combination with the local topography, the Vale of Glamorgan railway line and River Ely form an important and logical separation between Llandough and the urban areas of Leckwith and Cardiff Bay. Therefore, it is considered development of this site would not lead towards coalescence.</p> <p>Although not a formal recreational facility the proposal would result in the loss of informal open space. However, given the steeply sloping topography on part of the site there is scope to incorporate open space provisions within any residential development.</p>  |          |
| <p><b>6. To minimise the causes and manage the effects of climate change</b></p> | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> <p>The site is capable of incorporating renewable energy sources or energy conservation measures.</p> | <p>The site is located close to the existing services and facilities within Llandough which would be accessible by walking or cycling to / from the site, particularly as the site lies adjacent to a recently upgraded shared walking and cycle path. Additionally, the area has the potential to link into cycle routes into Cardiff Bay and Cardiff city centre.</p> <p>Llandough is well served by public transport by virtue of its location close to the strategic highway network and Cardiff and Penarth. The area has five bus services (89A, 89B, X5, 95, X46) with one service providing 8 busses a day to / from Llantwit Major, Barry and Cardiff.</p> <p>The site partially lies within a flood zone B to the north and also lies within an area considered to be of intermediate susceptibility to surface water flooding. The Environment Agency has noted that any proposal would need to undertake a surface water assessment</p> | <p>+</p> |

|  |   |   |   |
|--|---|---|---|
|  |   | <p>which considers surface water disposal and management.</p> <p>Given the site is proposed for residential development there is scope for the incorporation of energy efficiency or renewable energy measures.</p>   |   |
| <b>7. To minimise waste</b>  | <p>The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).</p>  | <p>The proposed development will generate additional domestic waste.</p>  | - |
| <b>8. To use land effectively and efficiently</b>                              | <p>The site is a brownfield site and / or involves the beneficial re-use of existing buildings.</p> <p>The site is capable of accommodating high density development</p>  | <p>The proposal would involve development of greenfield land.</p> <p>Although not in agricultural use, the site is undeveloped and partially used for informal open space. Therefore, this site is considered as being a greenfield site. An exception to this is the former reservoir site to the east, which has been submitted as a separate candidate site, and is considered as being a brownfield site.</p> <p>The site is capable of accommodating medium density development to reflect the character of the existing urban area.</p> | - |
| <b>9. To protect and enhance the built environment and natural environment</b> | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>The site does not lie within or adjoin a conservation area or other historic interest designation.</p> <p>A number of mature trees are present throughout the site, some of which may have some merit for protection, however this is not considered to be a significant issue for development of the site.</p> <p>There is the potential for the site to have ecological value given the greenfield nature and the existence of a stream and pond to the east of the site. The Environment Agency have</p>                                | - |

|  |   |   |           |
|--|---|---|-----------|
|  |   | advised that such features, within the woodland / scrub area, should be protected as standing open water and running water are Priority UK BAP Habitats. It is noted that small eutrophic ponds are also listed within the UK BAP. Therefore, it is likely that significant mitigation or off site compensation will be required.   |           |
| <b>10. To provide a high quality environment within all new developments</b>   | The development has the potential to support high quality public realm.   | The site has potential to develop a high quality and accessible public realm.   | <b>+</b>  |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area). | The site is not located within or in close proximity to these historic or cultural designations.  | <b>0</b>  |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p> | <p>The site is located close to the existing services and facilities within Llandough, including large employment sites such as Llandough Hospital and others in Cardiff and Penarth, which would be accessible by walking or cycling to / from the site. This is particularly the case as the site lies adjacent to a recently upgraded shared walking and cycle path.</p> <p>Furthermore, Llandough is well served by public transport by virtue of its location close to the strategic highway network and Cardiff and Penarth. The area has five bus services (89A, 89B, X5, 95, X46) with one service providing 8 busses a day to / from Llantwit Major, Barry and Cardiff.</p> <p>The area has the potential to link into cycle routes into Cardiff Bay and Cardiff city centre. ### SA Summary Comments

The site is an undeveloped greenfield parcel of land within Llandough. Part of the site submitted includes a separate candidate site (2312/CS1) which comprises the former reservoir site and is considered as being a brownfield site.

The site has the potential to deliver a significant number of residential dwellings, including affordable housing, within the Penarth Housing Submarket which is an area of relatively high need. In addition, existing services and facilities, including some employment, are accessible from the site by walking and cycling and the surrounding area has the potential to building upon existing walking and cycling paths. Furthermore, Llandough is well served by public transport by virtue of its location close to the strategic highway network and Cardiff and Penarth. The area has five bus services (89A, 89B, X5, 95, X46) with one service providing 8 busses a day to / from Llantwit Major, Barry and Cardiff.

Therefore, this site generally realises a greater number of positive effects due to the delivery of housing within a relatively sustainable location. The negative effects arise from the potential mitigation and offsite compensation relating to nature conservation and flooding issues and the loss of informal open space within the built environment.

## SA Assessment: Land north and south of Leckwith Road, Llandough:

| <b>SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL</b>                    |  |  |               |
|---|--|--|---------------|
|   |  | <b>Assessment Criteria</b>   | <b>Effect</b> |
|   |  | Development at the site will have a positive impact on sustainability  | ++            |
|   |  | Development at the site will have a some positive impact on sustainability   | +             |
|   |  | Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects.  | 0             |
|   |  | Development at the site will have a slight negative impact on the sustainability.  | -             |
|   |  | Development at the site will have a very negative impact on sustainability   | --            |
|   |  | Development at the site would have both positive and negative impacts on sustainability  | +/-           |
|   |  | The impact of an issue cannot be predicted at this stage   | ?             |
| <b>Sustainability Objective</b>   | <b>Appraisal guidance notes:</b>   | <b>Assessment Criteria</b>   | <b>Effect</b> |
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study.</p> | The site has not been promoted for Affordable Housing although as a residential site it has the potential to deliver some Affordable Housing within the Penarth Housing Submarket which is an area of relatively high need.  | <b>+</b>      |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>   | <p>Part of the site is undeveloped greenfield site and is not promoted for community, leisure or recreational facilities.</p> <p>The site would not result in the loss of a community facility.</p> <p>Given the relatively small scale of the site there is unlikely to be potential for developer contributions towards new/enhanced community facilities.</p> | <b>+</b>      |

|   |   |  |              |
|---|---|--|--------------|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | <p>The sites consist of two parcels of line is located on the north and of the western edge of Llandough along Leckwith Road. However, existing services and facilities within Llandough would be accessible by walking or cycling to / from the site.</p> <p>Llandough is well served by public transport by virtue of its location close to the strategic highway network and Cardiff and Penarth. The area has five bus services (89A, 89B, X5, 95, X46) with one service providing 10 busses a day to / from Barry and Cardiff Central. In particular, the site is located less than 200 meters away from a bus shelter.</p> | <b>+</b>     |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.   | Llandough is an area with relatively low multiple deprivation and development of this site is unlikely to have a significant impact upon the causes of deprivation. There would, however, be minor positive effects given the small provision of affordable housing within an area of relatively high need.  | <b>0</b>     |
| <b>5. To maintain, protect and enhance community spirit</b>               | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>  | <p>Although development of the site would not lead to coalescence it would extend the built up area of Llandough further along Leckwith Road.</p> <p>Development of the site would not lead to a loss of a recreational facility.</p>  | <b>+ / -</b> |
| <b>6. To minimise the causes and manage the effects of climate change</b> | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> <p>The site is capable of incorporating renewable energy sources or energy conservation measures.</p> | <p>The sites consist of two parcels of line is located on the north and of the western edge of Llandough along Leckwith Road. However, existing services and facilities within Llandough would be accessible by walking or cycling to / from the site.</p> <p>Llandough is well served by public transport by virtue of its location close to the strategic highway network and Cardiff and Penarth. The area has five bus services (89A, 89B, X5, 95, X46) with one service providing 10 busses a</p>   | <b>+</b>     |

### SA Summary Comments

This is a greenfield candidate site which lies on the north western edge of Llandough along Leckwith road and is formed by approximately half undeveloped scrubland with the remainder of the site dense woodland.

The site is located along the ridge forming the Leckwith escarpment and forms part of an area considered to be of landscape importance. Given the prominent position of the site along the Leckwith escarpment it is likely that if developed in its entirety, insensitively designed, tall or high density development would have a negative landscape impact. Therefore, it may be that it is only appropriate to develop the half of the site currently not covered by woodland. If the site boundary were to be drawn here it would provide a more logical settlement boundary with the existing development on the opposite side of Leckwith road.

Development of the site would contribute towards meeting the housing needs, including affordable housing, within the Penarth Housing Submarket which is an area of relatively high need. Although slightly detached and on the north western edge of Llandough, existing services and facilities, including some employment, would be accessible from the site by walking and cycling. Furthermore, Llandough is well served by public transport by virtue of its location close to the strategic highway network and to

Cardiff and Penarth. The area has five bus services (89A, 89B, X5, 95, X46) with one service passing the site providing up to 10 busses a day to / from Barry and Cardiff Central.

Therefore, this site generally realises positive effects due to the delivery of housing on a brownfield site within a relatively sustainable location. Some negative effects were realised mainly due to the potential negative effects on the landscape and nature conservation interests if the site were developed in its entirety.

## SA Assessment: Land north of the Railway Line, Rhoose

| <b>SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL</b>                    |  |   |               |
|---|--|---|---------------|
|   |  | <b>Assessment Criteria</b>  | <b>Effect</b> |
|   |  | Development at the site will have a positive impact on sustainability   | <b>++</b>     |
|   |  | Development at the site will have a some positive impact on sustainability  | <b>+</b>      |
|   |  | Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects.   | <b>0</b>      |
|   |  | Development at the site will have a slight negative impact on the sustainability.   | <b>-</b>      |
|   |  | Development at the site will have a very negative impact on sustainability  | <b>--</b>     |
|   |  | Development at the site will have both positive and negative impacts on sustainability.   | <b>+/-</b>    |
|   |  | The impact of an issue cannot be predicted at this stage  | <b>?</b>      |
| <b>Sustainability Objective</b>   | <b>Appraisal guidance notes:</b>   | <b>Assessment Criteria</b>  | <b>Effect</b> |
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study.</p> | The site has been promoted for residential development and given the large scale of the site has the potential to deliver a significant number of affordable dwellings within an area of high need.   | <b>++</b>     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>   | <p>The site has been promoted for residential development.</p> <p>Development of the site would not result in the loss of a community facility.</p> <p>Given the scale of the site there is likely to be significant potential for the provision of enhanced / new community facilities from developer contributions related to the site.</p> | <b>+</b>      |

|   |   |  |           |
|---|---|--|-----------|
| <b>3. To maintain and improve access for all</b>            | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | <p>The site is located to the North of Rhoose Point on a greenfield site which has previously been allocated for residential development.</p> <p>Initial highway observations consider that a safe and suitable access could be provided if developed in conjunction with the adjoining site to the east. It would be possible to walk and cycle to the villages existing services and facilities given that the village core is located within close proximity to the site.</p> <p>Rhoose is relatively well served by public transport by virtue of its location along a main highway. The village is served by the X5, X45, X91, 95, V5 and M1 bus services. The nearest bus stops are located close to the site on Porthkerry Road.</p> <p>Given the location and scale of the site there is potential for the improvement of sustainable transport links for developer contributions related to the site.</p> | <b>++</b> |
| <b>4. Reduce the causes of deprivation</b>                  | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation. | The site lays within an area of relatively low multiple deprivation. However, given the scale of the proposal and potential affordable housing and community facilities the development is likely to realise a positive effect on deprivation.   | <b>+</b>  |
| <b>5. To maintain, protect and enhance community spirit</b> | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>  | <p>Although providing an extension to Rhoose development of the site would not lead to coalescence of settlements. Furthermore, it is considered that Pentir-y-de provides a logical settlement boundary at this location.</p> <p>Development of the site would not lead to loss of a community facility.</p>  | <b>++</b> |

|  |   |  |                  |
|--|---|--|------------------|
| <b>6. SA Summary Comments

This 11.97 ha greenfield site is located to the north of Rhoose Point and has been promoted for residential use.

If developed the site would provide a significant number of dwellings, including affordable housing, within an area of high need. Furthermore, the site is located within a sustainable location close to public transport links and to the village centre with the potential to build upon existing walking / cycling links.

Therefore, this site scores generally positive results against the sustainability objectives. These arise from the provision of housing within an area of high need within a relatively sustainable location. The negative results relate to impacts of developing a large greenfield site.

### SA Summary Comments

This undeveloped brownfield site is located to the south of the railway line within the Rhoose Point development and has been promoted for residential use.

If developed the site would provide additional dwellings, including affordable housing, within an area of high need. Furthermore, the site is located within a relatively sustainable location close to public transport links and to the village centre with the potential to build upon existing walking / cycling links. However, residential development of the site would result and would result in a loss of land previously allocated for employment land. Notwithstanding this, the site has remained undeveloped for a number of years. The Employment Land study has reviewed the potential uses and suitability of the site and recommends it should be re-allocated for mixed-uses.

Therefore, this site realises a mixture of results against the sustainability objectives with generally more positive effects than negatives. The negative effects relate to the loss of employment land whilst the positives are realised by the provision of additional housing, including affordable housing, within an area of relatively high need.

## SA Assessment: Land West of Swanbridge, Sully

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |

### SA Summary Comments

The site is located to the east of Sully and is bounded by Swanbridge road to the east and a large residential candidate site to the north. The site is currently in agricultural use and although development of the site would not directly lead to coalescence it would extend the built up area of Sully to Swanbridge road, which could form a logical boundary to the village.

Initial highway observations consider that there are significant access constraints. If suitable access can be provided existing services and facilities would be accessible by walking and cycling. Sully is relatively well served by public transport by virtue of its location along a main highway and bus stops in each direction are located on Lavernock road roughly 130 metres away from the edge of the site.

This greenfield site generally scores positively with a limited number of double negative effect. The positive effects generally arise from developing a site within a relatively sustainable location with the potential to improve local walking / cycling routes and from the provision of housing within an area of relatively high need. The negative results primarily relate to the impact of developing Grade 2 agricultural land and the impacts of developing a large residential site.

## SA Assessment Criteria: Land to the West of Port Road, Wenvoe

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |
| Development at the site would have positive and negative impacts on sustainability  | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria  | Effect |
|---|---|--|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | The site is being considered for housing including some affordable housing. Wenvoe falls within the East Vale housing market area identified in the Local Housing Market Assessment. The provision of some affordable housing on this site would assist in meeting the need identified in the sub market area. | ++     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | The site is not being considered for these uses and development would not result in the loss of a community facility. The proposed development would support existing services and facilities in the village.  | +      |

|   |   |   |            |
|---|---|---|------------|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | Existing village facilities are accessible from the site by foot and cycle. Future occupiers would still need to travel to Barry or Culverhouse Cross to access secondary education and the wider services and facilities that area required on a regular basis. Wenvoe is on a bus route and is served by the X91, 86, 90 and 96 services. There is a bus stop in close proximity to the site. | <b>+</b>   |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.   | Development of the site would have a minor impact on reducing the causes of deprivation given the sites location and consideration for housing (including affordable housing).  | <b>+</b>   |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.   | Development of the site would not lead to coalescence of settlements or the loss of recreation land / a community facility.   | <b>0</b>   |
| <b>6. To minimise the causes and manage the effects of climate change</b> | The site would not increase the need to travel and or increase travel distances<br><br>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources<br><br>The site is capable of incorporating renewable energy sources or energy conservation measures | The site lies on the southern fringe of Wenvoe. However, there will inevitably be a need for future occupiers to travel to access additional services and facilities in Barry/Culverhouse Cross.<br><br>The site is not within an area prone to flooding and sustainable energy measures could be incorporated into future development.   | <b>+/-</b> |
| <b>7. To minimise waste</b>   | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).   | The site is being considered for residential development which would generate additional domestic waste.  | <b>--</b>  |
| <b>8. To use land effectively and efficiently</b>                         | The site is a brownfield site and / or involves the beneficial re-use of existing buildings.<br><br>The site is capable of accommodating high density development   | The site is greenfield and appears to be grade 3b agricultural land quality. Medium density development would be in keeping with the character of surrounding dwellings and would be appropriate given its semi rural location.   | <b>-</b>   |

|  |   |   |       |
|--|---|---|-------|
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>The site does not lie within or immediately adjacent to a conservation area. The southern part of the site adjoins the Wenvoe Castle historic parks and gardens. Parts of the site are covered in trees and hedgerows which have biodiversity and landscape value. Any development should seek to incorporate a large proportion of the existing landscaping into the new development. The site is in adjacent to an area of conservation value. The site is within the Duffryn Basin and Ridge Slopes Special Landscape Area.</p> | --    |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>There is some scope to incorporate high quality public realm as part of any future development however the benefits of this are likely to be restricted to the future users of the site.</p>   | +     |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | <p>The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).</p>  | <p>The site is adjacent to an area of ancient woodland and is in close proximity to the Wenvoe Castle historic parks and gardens.</p>   | -     |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p>   | <p>Existing village facilities are accessible from the site by foot and cycle. Future occupiers would need to travel to Barry to access secondary education and wider facilities. They may also travel to Culverhouse Cross for shopping. Wenvoe is on a bus route and is served by the X91, 86, 90 and 96 services. There is a bus stop in close proximity to the site.</p>  | + / - |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>   | <p>The site is not under consideration for these uses.</p>  | 0     |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b>                      | <p>The site is located either within a centre, edge of centre or an out of town location.</p>   | <p>The site is not located within or adjoining a retail centre. However, the development could assist in supporting existing services within Wenvoe village as well as facilities in Barry</p>  | +     |

|   |  |   |          |
|---|--|---|----------|
|   |  | town centre and Culverhouse Cross.                            |          |
| <b>15. To promote appropriate tourism</b> | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility. | The site is not under consideration for tourism related uses. | <b>0</b> |

### Effect Summary Table

| ++ | + | 0 | - | -- | +/- | ? |
|----|---|---|---|----|-----|---|
| 1  | 5 | 3 | 3 | 1  | 2   | 0 |

### SA Summary Comments

This site has a high number of positive and neutral effects as it will provide an element of affordable housing, is located in close proximity to existing local services and public transport. Negative impacts are derived from the use of predominantly green field agricultural land and the possible impact on the existing treescape and local biodiversity. Any future development should be appropriately landscaped to reduce visual impact on the surrounding sensitive special landscape. Notwithstanding the proximity of the site to local services, these are limited and there will remain a need for future occupiers of the site to travel further afield for their primary services and facilities.

Overall this is a slightly more positive than negative assessment against the sustainability indicators' primarily resulting from the sites location close to a primary settlement which provides services and facilities.

## SA Assessment: Land adjoining Court Close Aberthin

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| Development at the site will have both positive and negative impacts on   | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria  | Effect   |
|---|---|--|----------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | <p>The site will deliver a mix of housing in an area of identified need. The amount of affordable housing will be somewhat small given the restricted nature of the site.</p> <p>The LHMA identifies the rural Vale as a location in need of affordable housing.</p>   | <b>+</b> |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | <p>Site is not promoted for these uses. The proposal would not result in loss of facility and this has the limited potential to support existing facilities.</p> <p>The potential to deliver further facilities is limited due to the scale of the site, although its location close to the village is of a benefit.</p> | <b>+</b> |

|   |   |   |          |
|---|---|---|----------|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | The site is closely related to the existing village with facilities within easy reach. There would be a need to travel to nearby Cowbridge for wider facilities. A bus service is available and Cowbridge Secondary School is a short walk away. The location of the village within short travel distance of Cowbridge is of benefit in terms of access to services, although limited car use to access services will be unavoidable. | <b>+</b> |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.   | Minor impact on reducing the causes of deprivation, given its location and promotion solely for housing.  | <b>0</b> |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.   | Would not lead to coalescence and would not result in loss of recreational land. Limited impact on setting of Aberthin given its restricted size and relationship to the existing urban form.   | <b>0</b> |
| <b>6. To minimise the causes and manage the effects of climate change</b> | The site would not increase the need to travel and or increase travel distances<br><br>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources<br><br>The site is capable of incorporating renewable energy sources or energy conservation measures | The site is closely related to Aberthin with direct access via Court Close, to village facilities. The need to travel further a field will have minimum impact due to the restricted nature of the site. The site is not located in an area prone to flooding and sustainable energy could be incorporated into the development.  | <b>0</b> |
| <b>7. To minimise waste</b>   | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).   | The development would generate waste and does not promote waste management facilities. The impact will be minimal due to the restricted nature of the site.   | <b>-</b> |

|  |   |  |          |
|--|---|--|----------|
| <b>8. To use land effectively and efficiently</b>  | <p>The site is a brownfield site and / or involves the beneficial re-use of existing buildings.</p> <p>The site is capable of accommodating high density development</p>  | <p>Site is greenfield. High density development is feasible but consideration needed to the character of the area and rural context. No loss of BMV agricultural land. Well related to the urban form of Aberthin.</p> <p>Would represent an affective limited urban extension.</p>  | <b>-</b> |
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>No impact on specific designations. Potential impact on wildlife, although no known wildlife destinations. Very closely related to the built environment of Aberthin and existing properties on Court Close.</p>  | <b>0</b> |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>The potential exists, but the value would be limited due to it not being a site that provides linkages.</p>   | <b>+</b> |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | <p>The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).</p>  | <p>No designations/no impact.</p>  | <b>0</b> |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p>   | <p>The site is in close proximity to the village with limited facilities. Aberthin is served by public transport. Use of the private car to access services will be mitigated in part due to the scale of the site and its proximity to the village, bus services and Cowbridge.</p> | <b>0</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>   | <p>No employment proposed. No loss of employment land.</p>   | <b>0</b> |

|   |  |  |          |
|---|--|--|----------|
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b> | The site is located either within a centre, edge of centre or an out of town location.                             | No impact on Vale town centres. Will assist services in Cowbridge to some extent, although Cowbridge has a high level of viability and vitality. | <b>0</b> |
| <b>15. To promote appropriate tourism</b>   | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility. | No tourism development proposed. No impact.  | <b>0</b> |

### Effect Summary Table

| ++ | + | 0 | - | +/- | -- | ? |
|----|---|---|---|-----|----|---|
| 0  | 4 | 9 | 2 | 0   | 0  | 0 |

### SA Summary Comments

The site has potential to deliver limited housing, given its restricted size. This restricted size and the relationship of the site to the existing village will result in the use of those small scale local facilities and a minimal impact in terms of traffic growth to access facilities in other service centres. The relationship of the site to the existing urban form of Aberthin will result in limited impact on the rural area. The proximity of the village to Cowbridge will also potentially reduce the need to travel by private car to access services.

## SA Assessment: Land to Rear of St David's Church in Wales Primary School, Colwinston

| <b>SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL</b>                    |   |   |               |
|---|---|---|---------------|
|   |   | <b>Assessment Criteria</b>  | <b>Effect</b> |
|   |   | Development at the site will have a positive impact on sustainability   | <b>++</b>     |
|   |   | Development at the site will have a some positive impact on sustainability  | <b>+</b>      |
|   |   | Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | <b>0</b>      |
|   |   | Development at the site will have a slight negative impact on the sustainability.   | <b>-</b>      |
|   |   | Development at the site will have a very negative impact on sustainability  | <b>--</b>     |
|   |   | Development at the site would have both positive and negative impacts on sustainability.  | <b>+/-</b>    |
|   |   | The impact of an issue cannot be predicted at this stage  | <b>?</b>      |
| <b>Sustainability Objective</b>   | <b>Appraisal guidance notes:</b>  | <b>Assessment Criteria</b>  | <b>Effect</b> |
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | Potential to deliver a range and change of housing, although not promoted solely for affordable housing. The site is located in the rural Vale, where an identified need exists.  | <b>+</b>      |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | Site is not promoted for these uses. However, potential exists, due to its location adjoining the school to provide enhanced school and or community facilities.  | <b>+</b>      |

|   |   |   |          |
|---|---|---|----------|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | Village facilities are accessible (especially the school, community hall and park, which are immediately adjoining the site). There would be a need to travel further a field for wider facilities.   | <b>+</b> |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.   | Very minor impact in reducing causes of deprivation given its promotion for housing and the Welsh Index of multiple deprivation for this area.  | <b>0</b> |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.   | Would not lead to coalescence and would not result in loss of recreational land or facilities. Potential to cause some urbanisation in a rural context, but in a highly sustainable location.   | <b>0</b> |
| <b>6. To minimise the causes and manage the effects of climate change</b> | The site would not increase the need to travel and or increase travel distances<br><br>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources<br><br>The site is capable of incorporating renewable energy sources or energy conservation measures | Site is sustainably located, immediately adjacent to village facilities. The site is not prone to flooding and sustainable measures could be incorporated into the development. There would however, be a need to travel further afield for wider facilities. | <b>+</b> |
| <b>7. To minimise waste</b>   | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).   | The development would generate waste and does not promote waste management facilities. The impact will not be significant given the scale of Colwinston.  | <b>-</b> |
| <b>8. To use land effectively and efficiently</b>                         | The site is a brownfield site and / or involves the beneficial re-use of existing buildings.<br><br>The site is capable of accommodating high density development   | The site lies within a designated conservation area and could therefore have an impact on the conservation area. The impact on landscape will however, be mitigated by the fact the site relates closely to existing urban development.                       | <b>-</b> |

|  |   |   |   |
|--|---|---|---|
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>Not designated as a conservation area. The southern boundary of the site is adjacent to the conservation area. The site will have a landscape impact and potential impact on biodiversity, but potential exists for mitigation especially given the fact that the land does slope gently away from the road. Hedgerows are unaffected.</p> | - |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>The site is located within a Conservation Area.</p>  | + |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | <p>The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).</p>  | <p>Not a designated site – no impact.</p>   | - |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p>   | <p>Colwinston is served by limited public transport. Bus links are located close to the site. Walking links to school and facilities are clearly viable given the location adjacent to facilities. There will be a need to travel further afield (car) to other facilities).</p>  | 0 |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>   | <p>Site is not promoted for employment.</p>   | 0 |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b>                      | <p>The site is located either within a centre, edge of centre or an out of town location.</p>   | <p>No impact on Vale town centres. Will potentially assist Cowbridge given its relationship to Cowbridge as nearest town.</p>   | 0 |
| <b>15. To promote appropriate tourism</b>  | <p>The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility.</p>   | <p>No tourism proposed – no impact.</p>   | 0 |

| <b>0</b>  | <b>5</b> | <b>6</b> | <b>4</b> | <b>0</b>   | <b>0</b>  | <b>0</b> |

### SA Summary Comments

The site has clear potential to deliver housing in a rural area of housing need. Colwinston does benefit from limited facilities, but a key attribute of the site is its location adjoining the local school and close to other village facilities, especially playing fields and the village hall. The development of the site would have an urbanising effect given its location on agricultural land within the Conservation Area. Potential exists to mitigate given the gentle terrain and the fact that the site backs on to existing residential development to the south, north and west.

## SA Assessment: The Garden Emporium, Fferm Goch

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| Development at the site would have both positive and negative impacts on sustainability.  | +/-    |
| The impact of an issue cannot be predicted at this stage  | ?      |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria  | Effect |
|---|---|--|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | The site has been promoted for executive housing but it has the potential to deliver a mix of housing tenures including affordable housing. Fferm Goch falls within the Rural housing market area identified in the Local Housing Market Assessment and the Rural Housing Needs Study indicates a need for affordable housing in this housing market area. | ++     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | The site is not being promoted for any of these uses. However, a development of this scale could provide some new or enhanced local facilities and help to support existing facilities in the village. The development of this site would not lead to the loss of a community facility.  | +      |

|   |  |   |           |
|---|--|---|-----------|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.  | Existing village services and facilities are easily accessible from the site by foot / cycle. However, there would remain a need to travel to Cowbridge (and other service centres) for secondary education and other wider facilities. These trips could be made by bus but they are more likely to be made by car given the frequency of the service.   | -         |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.  | Minor impact on reducing the causes of deprivation given its location and its promotion solely for housing.   | <b>0</b>  |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.  | The development of the site would not lead to coalescence or the loss of a recreational / community facility.   | <b>0</b>  |
| <b>6. To minimise the causes and manage the effects of climate change</b> | The site would not increase the need to travel and or increase travel distances.<br><br>The site is not located within an area prone to flood risk or will have a negative effect on the quality of water resources.<br><br>The site is capable of incorporating renewable energy sources or energy conservation measures. | Given the scale of the site and the availability of local services and facilities, the majority of future occupiers will need to travel to other settlements to access employment and wider facilities. The site is not located within an area of flood risk. There is potential for sustainable energy measures to be incorporated into the development. | -         |
| <b>7. To minimise waste</b>   | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).  | The development would generate waste and does not promote waste management facilities. The impact would be reasonably significant due to the size of the proposal.  | -         |
| <b>8. To use land effectively and efficiently</b>                         | The site is a brownfield site and / or involves the beneficial re-use of existing buildings.<br><br>The site is capable of accommodating high density development  | The site was previously used as a garden centre and is considered to be brownfield. The site is capable of accommodating high density development.  | <b>++</b> |

|  |   |   |          |
|--|---|---|----------|
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>No impact on specific designations. Potential adverse impact on biodiversity although new biodiversity opportunities will be created as part of the new development. The redevelopment of this site would also have a positive impact on the built environment in terms of visual amenity.</p> | <b>+</b> |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>The potential exists to incorporate this within the new development.</p>   | <b>+</b> |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | <p>The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).</p>  | <p>No designations / no impact.</p>   | <b>0</b> |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p>   | <p>Although the site is in close proximity to a bus stop, the village bus service (V3/V4) is not very frequent. The existing services and facilities within the village can be accessed by foot and cycle.</p>  | <b>+</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>   | <p>Although the former garden centre was a source of employment it was a retail use. The proposed use is for residential not employment.</p>  | <b>0</b> |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b>                      | <p>The site is located either within a centre, edge of centre or an out of town location.</p>   | <p>The development will assist in supporting existing services and facilities in Cowbridge district centre and other service centres.</p>   | <b>0</b> |
| <b>15. To promote appropriate tourism</b>  | <p>The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility.</p>   | <p>No tourism development proposed, therefore no impact.</p>  | <b>0</b> |

### SA Summary Comments

This brownfield site relates well to the existing housing within the village and offers the potential to deliver a mix of housing including affordable housing. The front part of site is highly visible from the main road and the development of the site would help to improve the public realm. Although Fferm Goch does benefit from some local facilities, there will be a need for residents to travel to service centres such as Cowbridge to access employment opportunities and additional services.

## SA Assessment: Ogmore Residential Centre

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| Development at the site would have both positive and negative impacts on sustainability.  | +/-    |
| The impact of an issue cannot be predicted at this stage  | ?      |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria   | Effect |
|---|---|---|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | The site has not been promoted by AH. However, given the scale of the site, it has the potential to deliver a mix of housing tenures including affordable housing. The LHMA indicates a need for AH across the whole of the Vale of Glamorgan.  | ++     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | The site has not been promoted for community, leisure or recreational facilities. Approximately 50% of the site is occupied by an existing residential education centre. However, it is acknowledged that this use ceased some time ago. The proposed development would help to sustain existing community facilities in Ogmore-by-Sea and has the potential to provide/contribute towards additional community facilities. | +      |

|   |   |  |          |
|---|---|--|----------|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | Existing services and facilities are easily accessible from the site by foot/bike/bus. There would be a need to travel to Llantwit Major/Bridgend for employment and other facilities. However, this could be via public transport.  | <b>+</b> |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.   | Minor impact on reducing causes of deprivation given the location of the site and its promotion for housing.   | <b>0</b> |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.   | The site would not lead to coalescence and relates with to the existing built form within the village. The existing use as a caravan has now ceased. The existing community facility closed some ago.  | <b>0</b> |
| <b>6. To minimise the causes and manage the effects of climate change</b> | The site would not increase the need to travel and or increase travel distances<br><br>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources<br><br>The site is capable of incorporating renewable energy sources or energy conservation measures | Future occupiers would be able to access existing village facilities by bike/foot. There would be a need to travel to other larger settlements, e.g. Llantwit Major/Bridgend to access employment opportunities and other services. However, these journeys could be made by public transport. In terms of flooding, the site falls within Zone A and is therefore not prone to flooding. There is potential for the development to incorporate renewable energy sources and energy conservation measures. | <b>-</b> |
| <b>7. To minimise waste</b>   | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).   | The proposed development will generate additional waste.   | <b>-</b> |
| <b>8. To use land effectively and efficiently</b>                         | The site is a brownfield site and / or involves the beneficial re-use of existing buildings.<br><br>The site is capable of accommodating high density development   | The site is classified as brownfield but will not involve the beneficial reuse of existing buildings. The site is capable of accommodating medium density development to reflect existing.   | <b>+</b> |

|  |   |  |          |
|--|---|--|----------|
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>No impact on specific designations. Impact on GHC is likely to be minimal provided that the scale and design of the dwellings is given careful consideration. Given that the site has been vacant for some time, there is the potential for it to have some ecological value.</p> | <b>?</b> |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>Site has some potential to support high quality public realm.</p>   | <b>+</b> |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | <p>The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).</p>  | <p>No impact on specific designations. Impact on GHC is likely to be minimal.</p>  | <b>0</b> |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p>   | <p>The site is accessible by foot/bike and within walking distance of existing bus stops. Services and facilities in adjoining settlements are accessible by public transport and bike.</p>  | <b>+</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>   | <p>The potential is not for employment use and will not result in the loss of employment land.</p>   | <b>0</b> |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b>                      | <p>The site is located either within a centre, edge of centre or an out of town location.</p>   | <p>The site is not located in or near an existing town, district or local centre. However, its residents are likely to use facilities in Llantwit Major or Bridgend.</p>   | <b>+</b> |
| <b>15. To promote appropriate tourism</b>  | <p>The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility.</p>   | <p>The proposal is not for a new or enhanced tourism facility. Although the last use of the site was for tourism, it is acknowledged that this use ceased some time ago.</p>   | <b>0</b> |

Effect Summary Table

| ++ | + | 0 | - | +/- | -- | ? |
|----|---|---|---|-----|----|---|
| 1  | 6 | 5 | 2 | 0   | 0  | 1 |

SA Summary Comments

Site has the potential to deliver a mix of housing including AH. Future occupiers could access existing services and facilities by foot/bike and public transport. There is likely to be some increased travel to nearby service centres (Llantwit Major and Bridgend) to access employment and additional facilities. Existing community use ceased some time ago. Potential for some new facilities to be incorporated into new development/contribute towards improving existing. Southerndown has a reasonable bus service and therefore it is feasible to access these areas by this mode. Scope to improve services on back of development.

## SA Assessment: Ogmore Caravan Park

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| Development at the site will have both positive and negative impacts on sustainability.   | +/-    |
| The impact of an issue cannot be predicted at this stage  | ?      |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria   | Effect |

SA Summary Comments

Site has the potential to deliver a mix of housing including AH. Future occupiers could access existing services and facilities by foot/bike and public transport. There is likely to be some increased travel to nearby service centres (Llantwit Major and Bridgend) to access employment and additional facilities.

## SA Assessment Criteria: Land to the East of St Nicholas

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |
| Development at the site would have positive and negative impacts on sustainability  | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria   | Effect    |
|---|---|---|-----------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | The site is under consideration for residential purposes and comprises elements of several sites that have been promoted for residential development. The LHMA indicates a need for affordable housing in the rural Vale and the site has the potential to deliver affordable or market housing for St Nicholas and the eastern part of the Vale. | <b>++</b> |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | The site is not under consideration for these uses and development of the site would not result in the loss of community facilities. The potential exists for the site to contribute towards or provide additional facilities, although any contribution would be small as the site is small.   | <b>0</b>  |

|   |   |   |           |
|---|---|---|-----------|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | The site is on the same side of the road as the village facilities. A short walk would bring you to bus stops for the main through regular bus service which operates from Bridgend to Cardiff. The school is accessible via a short walk as is the church. The village has no shops or pubs and the nearest facilities would be at Culverhouse Cross. It is unclear whether suitable access could be obtained via Ger y Lan as the road does not appear to be suitable for additional traffic. | <b>0</b>  |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.   | Development of the site would have a minor impact on reducing the causes of deprivation, given its location and that it is under consideration solely for housing.  | <b>0</b>  |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.   | Development of the site would not lead to the coalescence of settlements and would not result in the loss of recreational land.   | <b>0</b>  |
| <b>6. To minimise the causes and manage the effects of climate change</b> | The site would not increase the need to travel and or increase travel distances<br><br>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources<br><br>The site is capable of incorporating renewable energy sources or energy conservation measures | The site is located close to the centre of St Nicholas not far from the village core. The nearest shopping is located at Culverhouse Cross approximately 2.5 kilometres away. A local bus service runs along the A48 between Cardiff and Bridgend and the nearest bus stop is approximately 300 metres from the site. The site is not located in an area prone to flooding and sustainable energy could be incorporated into the development.   | <b>+</b>  |
| <b>7. To minimise waste</b>   | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).   | Development of the site for housing would generate additional domestic waste. The site is not under consideration for a waste management facility.  | <b>--</b> |
| <b>8. To use land effectively and efficiently</b>                         | The site is a brownfield site and / or involves the beneficial re-use of existing buildings.<br><br>The site is capable of accommodating high density development   | The site is greenfield and has been identified as Grade 2 agricultural land the best and most versatile. Development for residential uses should reflect the densities of the surrounding area.   | <b>-</b>  |

|  |   |   |          |
|--|---|---|----------|
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>The site lies adjacent to the St Nicholas Conservation Area to the south however relatively modern housing is located to the west of the identified site. Future development would need to respect the character of the conservation area as detailed within the conservation area appraisal document. The site is within the Ely Valley and Ridge Slopes Special Landscape Area.</p>  | -        |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>There is limited potential for improvements to the public realm and any benefits would be enjoyed largely by future residents.</p>   | <b>0</b> |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | <p>The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).</p>  | <p>The site lies adjacent to the St Nicholas Conservation Area to the south however relatively modern housing is located to the west of the identified site. Future development would need to respect the character of the conservation area as detailed within the conservation area appraisal document. No other designations would be affected by future development.</p>  | -        |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p>   | <p>The site is located on the edge of St Nicholas. The village facilities are accessible by walking and cycling however any future residents would be reliant upon the wider range of services and facilities available within centres such as Barry or Culverhouse Cross to meet their regular needs. St Nicholas is served by public transport to Cowbridge/Bridgend and Culverhouse Cross/Cardiff and there are bus stops approximately 300 metres from the site on the A48.</p> | -        |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>   | <p>The site is not under consideration for employment uses and development would not result in the loss of employment land.</p>   | <b>0</b> |

|   |  |  |          |
|---|--|--|----------|
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b> | The site is located either within a centre, edge of centre or an out of town location.                             | No impact on Vale town centres. Any occupiers of the development are likely to go to the out of centre development at Culverhouse Cross for there day to day shopping needs as the nearest centre. | <b>0</b> |
| <b>15. To promote appropriate tourism</b>   | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility. | The site is not under consideration for tourist related facilities.  | <b>0</b> |

### Effect Summary Table

### SA Summary Comments

The site is under consideration for residential development and is located close to the centre of the village of St Nicholas. The site is located close to the main A48 and local bus services operate between Cardiff and Bridgend. Local bus stops are located approximately 300 metres from the site. The site has been identified as grade 2 agricultural land and is within the Ely Valley and Ridge Slopes Special Landscape Area. The site is also adjacent to the St Nicholas conservation area any future development would need to be carefully planned to avoid any adverse impact on these designations.

## SA Assessment: Land off St Brides Road, Wick

| <b>SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL</b>                    |   |  |               |
|---|---|--|---------------|
|   |   | <b>Assessment Criteria</b>   | <b>Effect</b> |
|   |   | Development at the site will have a positive impact on sustainability  | <b>++</b>     |
|   |   | Development at the site will have a some positive impact on sustainability   | <b>+</b>      |
|   |   | Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects.  | <b>0</b>      |
|   |   | Development at the site will have a slight negative impact on the sustainability.  | <b>-</b>      |
|   |   | Development at the site will have a very negative impact on sustainability   | <b>--</b>     |
|   |   | Development at the site will have both positive and negative impacts on sustainability.  | <b>+/-</b>    |
|   |   | The impact of an issue cannot be predicted at this stage   | <b>?</b>      |
| <b>Sustainability Objective</b>   | <b>Appraisal guidance notes:</b>  | <b>Assessment Criteria</b>   | <b>Effect</b> |
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | The site has not been promoted for affordable housing but it has the potential to deliver a mix of housing. Wick falls within the Rural housing market area identified in the Local Housing Market Assessment and the Rural Housing Needs Study indicates a need for affordable housing in this housing market area. | <b>++</b>     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | The site is not being promoted for these uses and the development would not result in the loss of a community facility. The development would support existing services and facilities in the village and is likely to deliver additional facilities due to its size.  | <b>++</b>     |

|   |   |  |           |
|---|---|--|-----------|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | Existing village facilities are accessible from the site by foot and cycle. There would be a need to travel to Llantwit Major and other service centres to access secondary education and other wider facilities. Wick has a good bus service and there is a bus stop within walking distance of the site.   | <b>++</b> |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.   | Minor impact on reducing the causes of deprivation given its location and promotion solely for housing.  | <b>0</b>  |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.   | The development of the site would not lead to the coalescence of settlements or the loss of a community facility / recreation land.  | <b>0</b>  |
| <b>6. To minimise the causes and manage the effects of climate change</b> | The site would not increase the need to travel and or increase travel distances<br><br>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources<br><br>The site is capable of incorporating renewable energy sources or energy conservation measures | The site lies on the north western fringe of the village but is within easy reach of existing village services and facilities. However, there will be a need for future occupiers to travel to access additional services and facilities in Llantwit Major and other service centres. The site is not within an area prone to flooding and sustainable energy measures could be incorporated into the development. | <b>0</b>  |
| <b>7. To minimise waste</b>   | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).   | The development would generate waste and does not promote waste management facilities.   | <b>--</b> |
| <b>8. To use land effectively and efficiently</b>                         | The site is a brownfield site and / or involves the beneficial re-use of existing buildings.<br><br>The site is capable of accommodating high density development   | The site is Greenfield and appears to be grade 2 agricultural land quality. High density development would not be in keeping with the character of surrounding dwellings and would be inappropriate given its semi rural location.   | <b>-</b>  |

|  |   |   |           |
|--|---|---|-----------|
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>There are a number of TPOs in close proximity to the southern site boundary. The site is bounded by hedgerows to the north and east with potential biodiversity value. These could be retained and incorporated into the layout of the development.</p>  | <b>0</b>  |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>The potential exists but would be limited given the location of the site.</p>  | <b>+</b>  |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | <p>The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).</p>  | <p>The site is not located within any of these designations, therefore no impact.</p>   | <b>0</b>  |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p>   | <p>Existing village facilities are accessible from the site by foot and cycle. There would be a need to travel to Llantwit Major and other service centres to access secondary education and other wider facilities. Wick has a good bus service and there is a bus stop within walking distance of the site.</p> | <b>++</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>   | <p>The site is not being promoted for employment use and the development would not lead to the loss of employment land.</p>   | <b>0</b>  |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b>                      | <p>The site is located either within a centre, edge of centre or an out of town location.</p>   | <p>The site is not located within or adjoining a retail centre. However, the development will assist in supporting existing services and facilities in Llantwit Major district centre and other service centres.</p>  | <b>0</b>  |
| <b>15. To promote appropriate tourism</b>  | <p>The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility.</p>   | <p>No tourism development proposed, therefore no impact.</p>  | <b>0</b>  |

Effect Summary Table

| <b>++</b> | <b>+</b> | <b>0</b> | <b>-</b> | <b>+/-</b> | <b>--</b> | <b>?</b> |
|-----------|----------|----------|----------|------------|-----------|----------|
| <b>4</b>  | <b>1</b> | <b>8</b> | <b>1</b> | <b>0</b>   | <b>1</b>  | <b>0</b> |

SA Summary Comments

This green field site has the potential to deliver a mix of housing types including affordable housing. However, the development would appear to result in the loss of some of the best and most versatile agricultural land. Although the site is currently undeveloped farmland it is located close to the heart of the village and bounded by existing development on two sides. Although the site is within walking / cycling distance of existing village services, there will still be a need for future occupiers to travel to service centres such as Llantwit Major to access employment opportunities and additional services. However, there may be some potential for the development to deliver additional services / facilities for the village given its size.

## SA Assessment: Land North of Sandy Lane, Ystradowen

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| Development at the site will have both positive and negative impacts on sustainability.   | +/-    |
| The impact of an issue cannot be predicted at this stage  | ?      |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria   | Effect |
|---|---|---|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | <p>The site has potential to deliver a range and choice of housing and by implication affordable housing. The site is located in an area of need or affordable housing (LHMA report).</p> <p>Given the small and restricted size of the site the potential to deliver affordable housing is somewhat limited.</p> | +      |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | <p>The site is not promoted for community, leisure or recreational facilities. Its development could deliver limited facilities and will assist in retaining, sustaining and potentially enhancing village services.</p>  | +      |

|   |   |  |           |
|---|---|--|-----------|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | Potential for good links to the village facilities, given the specific location of the site. Bus links are close to the site given the relatively central location of the site to the village.   | <b>+</b>  |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.   | Minor impact or deprivation as Ystradowen is not ranked in the lower indices of multiple deprivation.  | <b>0</b>  |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.   | Will not lead to loss of community facilities or recreational land or led to coalescence. No impact on PROW's.   | <b>0</b>  |
| <b>6. To minimise the causes and manage the effects of climate change</b> | The site would not increase the need to travel and or increase travel distances<br><br>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources<br><br>The site is capable of incorporating renewable energy sources or energy conservation measures | The site is close to the village centre which has limited facilities. There would however, be a need to travel, as facilities are limited, although there are bus links. The propensity to travel by private car will remain, although this negative impact is slightly mitigated by the fact that the site is restricted in scale. The site is not subject to flooding and could incorporate renewable energy and energy conservation measures. | <b>0</b>  |
| <b>7. To minimise waste</b>   | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).   | The site will generate waste (albeit restricted due to its size).<br><br>The site does not provide a waste management facility.  | <b>-</b>  |
| <b>8. To use land effectively and efficiently</b>                         | The site is a brownfield site and / or involves the beneficial re-use of existing buildings.<br><br>The site is capable of accommodating high density development   | Site is greenfield, it does not propose re-use of buildings. The site is unlikely to yield high density development due to the character of surrounding area. Will lead to the loss of agricultural land, but well related to the urban form of Ystradowen.  | <b>--</b> |

|  |   |  |          |
|--|---|--|----------|
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>The site is well related to the village and current built environment. No impact on designations. Any hedgerows bound the site and could be retained and protected.</p> <p>The proposal will nevertheless urbanise a current open Greenfield.</p>                 | <b>-</b> |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>Site could incorporate public realm and the site is potentially accessible through pedestrian/cycling links.</p>  | <b>+</b> |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | <p>The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).</p>  | <p>Not located in or adjoining to a designated site.</p>   | <b>0</b> |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p>   | <p>Site is well located to Ystradowen which has limited services. Access can be obtained via Badger Brook and/or Sandy Lane. The need to travel to wider services (to Cowbridge and beyond) remains. Public Transport (in the form of limited bus links) exists.</p> | <b>-</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>   | <p>Not for employment and no loss of employment land. No impact.</p>   | <b>0</b> |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b>                      | <p>The site is located either within a centre, edge of centre or an out of town location.</p>   | <p>Site is no located in a town centre.</p>  | <b>0</b> |
| <b>15. To promote appropriate tourism</b>  | <p>The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility.</p>   | <p>Not proposed for a tourist facility and would not result in a loss of tourism facilities.</p>   | <b>0</b> |

### Effect Summary Table

| <b>++</b> | <b>+</b> | <b>0</b> | <b>-</b> | <b>+/-</b> | <b>--</b> | <b>?</b> |
| <b>0</b>  | <b>4</b> | <b>7</b> | <b>3</b> | <b>0</b>   | <b>1</b>  | <b>0</b> |

SA Summary Comments

The site has the potential to deliver an appropriate mix of housing, related in scale to the existing village of Ystradowen and also well located in terms of access to the village and existing facilities. There would be a requirement to travel further a field for wider services and bus links are available. The impact of travel by the private car is minimised given the small scale of the site. Given the relationship of the site to the existing built form, the development would not be highly urbanising and would not constitute urban spread into the open countryside.

## SA Assessment Criteria: ITV Wales, Culverhouse Cross

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |
| Development at the site would have positive and negative impacts on sustainability  | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria  | Effect |
|---|---|--|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | The site has not been promoted for affordable housing however, as a large residential site it has the potential to deliver a significant number of affordable housing units. While located within the East Vale housing sub market, the site is located in close proximity to the Barry and Coastal housing sub market area where significant affordable housing need has been identified.               | ++     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | <p>The site has not been promoted for community, leisure or recreational uses however as a large residential proposal development could provide additional local facilities.</p> <p>The proposal would not lead to a loss of a community facility as such but the sites current use is the ITV Wales Studio, therefore development would result in the loss of a commercial enterprise on this site.</p> | 0      |

|   |   |  |   |
|---|---|--|---|
| <b>3. To maintain and improve access for all</b>            | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | The site is well located (less than 500m) to access local bus services between Cardiff, Barry and Penarth which operate frequent services along the A4050. However local improvements e.g. footpaths and cycle ways, would be required to enable safe access to the A4050.<br>Given the site's location on the primary road network accessing the M4, Cardiff City Centre, Barry and Cardiff Airport, redevelopment of the site will require improvements to the local highway infrastructure.   | + |
| <b>4. Reduce the causes of deprivation</b>                  | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation. | A minor positive impact upon reducing the causes of deprivation given that the site has been promoted solely for housing however development could provide affordable housing as well as other local community facilities which would contribute towards reducing the causes of local deprivation.   | + |
| <b>5. To maintain, protect and enhance community spirit</b> | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.   | It is considered that residential development of this site would not lead to the coalescence of settlements although it should be noted the site partially lies within an existing UDP green wedge designation, which was designated to take account of pressure for development resulting from the continued expansion of Culverhouse Cross. The LDP Green Wedge review paper notes the elevated position and the openness of the land in this area. The site lies adjacent to the Duffryn Basin and Ridge Slopes Special Landscape Area.<br>Development of the site would not result in the loss of recreational land or a community facility. | - |

|  |  |  |                  |
|--|--|--|------------------|
| <b>6. To minimise the causes and manage the effects of climate change</b>      | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> <p>The site is capable of incorporating renewable energy sources or energy conservation measures</p> | <p>The site is well located (less than 500m) to access local bus services between Cardiff, Barry and Penarth which operate frequent services along the A4050. The site is within walking/cycling distance of the main retail centre at Culverhouse Cross which offers a wide range of services and facilities. The opportunity therefore exists for future residents to utilise sustainable modes of transport. However local improvements e.g. footpaths and cycle ways, would be required to enable safe access to the A4050 and this could be supported by future development.</p> <p>The site is not located in an area prone to flood risk.</p> <p>Given the scale of the site there is the potential for the incorporation of renewable energy measures. As a residential site all new properties would be required to comply with current national energy efficiency standards.</p> | <p><b>+</b></p>  |
| <b>7. To minimise waste</b>  | <p>The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).</p>   | <p>The site will generate significant additional domestic waste and no waste management facilities are proposed.</p>   | <p><b>--</b></p> |
| <b>8. To use land effectively and efficiently</b>                              | <p>The site is a brownfield site and / or involves the beneficial re-use of existing buildings.</p> <p>The site is capable of accommodating high density development</p>   | <p>The site is brownfield, its former use the ITV Wales Studios.</p> <p>High density development would be possible however it is unlikely that this would be appropriate.</p>  | <p><b>+</b></p>  |
| <b>9. To protect and enhance the built environment and natural environment</b> | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p>  | <p>Development of the site as proposed would not have an impact upon a conservation area or a building or garden of historic interest and no local ecological designations have been identified on or close to the site.</p> <p>Part of the site to the west lies within an existing UDP green wedge designation, which was designated to take account of pressure for development resulting from the continued</p>  | <p><b>-</b></p>  |

|  |   |   |          |
|--|---|---|----------|
|  |   | expansion of Culverhouse Cross.   |          |
| <b>10. To provide a high quality environment within all new developments</b>   | The development has the potential to support high quality public realm.   | The development of the site could present the opportunity for high quality public realm however the benefits of this are likely to be limited to future residents.  | <b>0</b> |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area). | The site is not located within a nationally or internationally designated ecological site and development as proposed would not impact upon an area of archaeological or historic importance.   | <b>0</b> |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | The site is well served by public transport and accessible by walking and cycling.<br><br>Services and facilities are easily accessible by a range of transport modes including walking and cycling.        | The site is well located (less than 500m) to access local bus services between Cardiff, Barry and Penarth which operate frequent services along the A4050. |----|---|---|---|----|-----|---|
| 1  | 5 | 6 | 2 | 1  | 0   | 0 |

### SA Summary Comments

This is a substantial brown field site located close to the major retail centre at Culverhouse Cross which offers a range of services and facilities. The site is well located (less than 500m) to access local bus services between Cardiff, Barry and Penarth which operate frequent services along the A4050. However local improvements e.g. footpaths and cycle ways, would be required to enable safe access to the A4050. Given the site's location on the primary road network accessing the M4, Cardiff City Centre, Barry and Cardiff Airport, redevelopment of the site will require improvements to the local highway infrastructure.

The site partially lies within an existing UDP Green Wedge allocation; therefore development on this site may have a negative landscape impact.

The development of this site would result in the loss of employment land; its current use is the ITV Wales Studios, however this is only in partial use and has not been identified as having a continued economic role.

## SA Assessment: Land of Badgers Brook Rise, Ystradowen

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| Development at the site will have both positive and negative impacts on   | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria  | Effect |
|---|---|--|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | The site will deliver limited housing in an area of identified need. The amount of affordable housing will be restricted given the restricted nature of the site.  | +      |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | <p>Site is not promoted for these uses. The proposal would not result in loss of facility and this has the limited potential to support existing facilities.</p> <p>The potential to deliver further facilities is limited due to the scale of the site, although its location close to the village is of a benefit.</p> | +      |

|   |   |   |          |
|---|---|---|----------|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | The site is closely related to the existing village with facilities within easy reach. There would be a need to travel to nearby Cowbridge for wider facilities (bus service available).  | <b>+</b> |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.   | Minor impact on reducing the causes of deprivation, given its location and promotion solely for housing.  | <b>0</b> |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.   | Would not lead to coalescence and would not result in loss of recreational land. Limited impact on setting of Ystradowen given its restricted size.   | <b>0</b> |
| <b>6. To minimise the causes and manage the effects of climate change</b> | The site would not increase the need to travel and or increase travel distances<br><br>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources<br><br>The site is capable of incorporating renewable energy sources or energy conservation measures | The site is closely related to Ystradowen with direct access via Sandy Lane, to village facilities. The need to travel further a field will have minimum impact due to the restricted nature of the site. The site is not located in an area prone to flooding and sustainable energy could be incorporated into the development. | <b>0</b> |
| <b>7. To minimise waste</b>   | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).   | The development would generate waste and does not promote waste management facilities. The impact will be minimal due to the restricted nature of the site.   | <b>-</b> |
| <b>8. To use land effectively and efficiently</b>                         | The site is a brownfield site and / or involves the beneficial re-use of existing buildings.<br><br>The site is capable of accommodating high density development   | Site is greenfield. High density development is feasible but consideration needed to the character of the area and rural context. No loss of BMV agricultural land. Well related to the urban form of Ystradowen.   | <b>-</b> |

|  |   |   |          |
|--|---|---|----------|
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>No impact on specific designations. Potential impact on wildlife, although no wildlife destinations. Very closely related to the built environment of Ystradowen and existing properties on Sandy Lane.</p>  | <b>-</b> |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>The potential exists, but the value would be limited due to it not being a site that provides linkages.</p>  | <b>+</b> |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | <p>The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).</p>  | <p>No designations/no impact.</p>   | <b>0</b> |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p>   | <p>The site is in close proximity to the village with limited facilities. Ystradowen is served by public transport. Use of the private car to access services will be mitigated in part due to the scale of the site and its proximity to the village and bus services.</p> | <b>0</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>   | <p>No employment proposed. No loss of employment land.</p>  | <b>0</b> |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b>                      | <p>The site is located either within a centre, edge of centre or an out of town location.</p>   | <p>No impact on Vale town centres. Will assist services in Cowbridge to some extent, although Cowbridge has a high level of viability and vitality.</p>   | <b>0</b> |
| <b>15. To promote appropriate tourism</b>  | <p>The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility.</p>   | <p>No tourism development proposed. No impact.</p>  | <b>0</b> |

Effect Summary Table

| <b>++</b> | <b>+</b> | <b>0</b> | <b>-</b> | <b>+/-</b> | <b>--</b> | <b>?</b> |
|-----------|----------|----------|----------|------------|-----------|----------|
| <b>0</b>  | <b>4</b> | <b>8</b> | <b>3</b> | <b>0</b>   | <b>0</b>  | <b>0</b> |

SA Summary Comments

The site has potential to deliver limited housing, given its restricted size. This restricted size and the relationship of the site to the existing village will result in the use of local facilities and a minimal impact in terms of traffic growth to access facilities in other service centres. The relationship of the site to the existing urban form of Ystradowen will result in limited impact on the rural area.

## SA Assessment: Llangan Gypsy and Traveller Allocation

| <b>SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL</b>  |   |   |               |
|---|---|---|---------------|
| <b>Assessment Criteria</b>  |   |   | <b>Effect</b> |
| Development at the site will have a positive impact on sustainability   |   |   | <b>++</b>     |
| Development at the site will have a some positive impact on sustainability  |   |   | <b>+</b>      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. |   |   | <b>0</b>      |
| Development at the site would have both positive and negative impact on sustainability  |   |   | <b>+/-</b>    |
| Development at the site will have a slight negative impact on the sustainability.   |   |   | <b>-</b>      |
| Development at the site will have a very negative impact on sustainability  |   |   | <b>--</b>     |
| The impact of an issue cannot be predicted at this stage  |   |   | <b>?</b>      |
| <b>Sustainability Objective</b>   | <b>Appraisal guidance notes:</b>  | <b>Assessment Criteria</b>  | <b>Effect</b> |
| <b>1. To provide the opportunity for people to meet their housing needs</b>   | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | The provision of a Gypsy and Traveller site would support the objectives of the Council's Housing Strategy 2007 – 2012 and meet the need identified within the 2008 Cardiff and Vale of Glamorgan Survey and Assessment of Gypsy and Traveller Accommodation.     | <b>+</b>      |
| <b>2. To maintain, promote and enhance the range of local facilities</b>  | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | <p>The site is not being investigated for these uses.</p> <p>The proposal to develop the site for the use proposed would not lead to the loss of existing community facilities and development of the site would not provide additional community facilities.</p> | <b>0</b>      |

|   |  |  |            |
|---|--|--|------------|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.  | The site is located close to the minor rural settlement of Fferm Goch and is approximately 600 metres from the village of Llangan. The service centre settlement of Cowbridge is approximately 7.5 kilometres away from the site. Limited local bus services operate in the vicinity. While the existing village services and facilities within Fferm Goch are accessible from the site by walking/cycling there would remain a need to travel to Cowbridge (and other service centres) for the full range of services and facilities that would be required on a regular basis and it is likely given the infrequency of the available bus services that these journeys would be made by private car. | <b>+/-</b> |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.  | Development of the site would not contribute toward reducing the causes of deprivation; however the provision of a permanent Gypsy and Traveller site could assist in enabling future residents of the site to access those services and facilities that contribute towards the measurement of multiple deprivation.   | <b>0</b>   |
| <b>5. To maintain, protect and enhance community spirit</b>               | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>   | Development of the site would not lead to coalescence and would not result in loss of recreational land or any community facilities.   | <b>0</b>   |
| <b>6. To minimise the causes and manage the effects of climate change</b> | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> <p>The site is capable of incorporating renewable energy sources or energy conservation measures</p> | The site is located close to the minor rural settlement of Fferm Goch and is approximately 600 metres from the village of Llangan. The service centre settlement of Cowbridge is approximately 7.5 kilometres away from the site. Limited local bus services operate in the vicinity. A permanent site is however likely to prove beneficial for future residents allowing improved access to the local employment market and/or a permanent base from which to develop self employment initiatives and opportunities. | <b>0</b> |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b> | The site is located either within a centre, edge of centre or an out of town location.   | The development proposed will not impact upon the viability of the Vale's town, district or local centres.   | <b>0</b> |
| <b>15. To promote appropriate tourism</b>   | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility.   | The proposal would not contribute to the promotion or development of tourism within the Vale of Glamorgan.   | <b>0</b> |

### Effect Summary Table

| ++ | + | 0  | +/- | - | -- | ? |
|----|---|----|-----|---|----|---|
| 0  | 2 | 10 | 3   | 0 | 0  | 0 |

### SA Summary Comments

The site is located within the countryside close to the minor rural settlement of Fferm Goch and some 7.5 kilometres from the main service centre of Cowbridge. The site is unaffected by any ecological, archaeological or historic designations and while there is evidence of localised surface water flooding in the area this does not directly affect the site. Although Fferm Goch benefits from

some local facilities, there would be a need for future residents of the site to travel to service centres such as Cowbridge or further afield to Bridgend to access employment opportunities and the wider range of services that would be required on a regular basis. Overall this is a largely neutral assessment against the sustainability objectives.

## SA Assessment Criteria: Penarth Learning Community, Sully Road, Penarth

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |
| Development at the site would have positive and negative impacts on sustainability  | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria   | Effect    |
|---|---|---|-----------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | The site has been promoted for education uses therefore will not deliver housing.                                       | <b>0</b>  |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | The site is promoted for educational uses therefore would have the ability to provide significant community facilities. | <b>++</b> |

|   |  |   |           |
|---|--|---|-----------|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.  | The site is within walking/cycling distance of existing facilities and public transport services; approximately 500m away from the nearest bus stop along Redlands Road. This stop is served by the 89A, 89B and 93 buses which run to Dinas Powys, Cardiff and Barry.                    | <b>+</b>  |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.  | Due to the sites proposed educational use, development would have a significant positive impact on reducing the causes of deprivation.  | <b>++</b> |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.  | The development proposed is within the existing school site therefore effects on coalescence would be neutral.<br><br>The sites development as proposed would not result in a loss of recreational land or a community facility.  | <b>0</b>  |
| <b>6. To minimise the causes and manage the effects of climate change</b> | The site would not increase the need to travel and or increase travel distances<br><br>The site is not located within an area prone to flood risk or would have a negative effect on the quality of water resources<br><br>The site is capable of incorporating renewable energy sources or energy conservation measures | The site is promoted for education on an existing education site therefore would not increase the need to travel.<br><br>The site is not located within an area prone to flood risk and could have the potential to incorporate renewable energy sources or energy conservation measures. | <b>0</b>  |
| <b>7. To minimise waste</b>   | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).  | The development would generate waste and does not promote waste management facilities however the impact would be negligible.   | <b>0</b>  |
| <b>8. To use land effectively and efficiently</b>                         | The site is a brownfield site and / or involves the beneficial re-use of existing buildings.<br><br>The site is capable of accommodating high density development  | The site is promoted for the same as its current use, education. It is a brownfield site and could involve the re-development of existing buildings and the construction of additional buildings.<br><br>The opportunity exists to use high density development where appropriate.        | <b>+</b>  |

|  |   |   |           |
|--|---|---|-----------|
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>The site is not affected by any on the listed designations.</p> <p>It is located within the undeveloped buffer between Dinas Powys and Penarth however the site is already in use for educational purposes therefore the significance of this is minimal.</p>  | <b>0</b>  |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>Due to the sites proposed use, the development has significant potential to support high quality public realm.</p>   | <b>++</b> |

Effect Summary Table

| ++ | + | 0 | - | -- | +/- | ? |
|----|---|---|---|----|-----|---|
| 3  | 4 | 8 | 0 | 0  | 0   | 0 |

SA Summary Comments

The site has been promoted for educational use on a site currently used for this purpose. It is within walking/cycling distance of existing facilities and public transport services; approximately 500m away from the nearest bus stop along Redlands Road. This stop is served by the 89A, 89B and 93 buses which run to Dinas Powys, Cardiff and Barry. Due to the sites proposed educational use, development would have a significant positive impact on reducing the causes of deprivation and there is some potential for local employment opportunities, although this would be limited. It is located within the undeveloped buffer between Dinas Powys and Penarth however the site is already in use for educational purposes therefore the significance of this is minimal.

### SA Summary Comments

This site has been promoted for educational use on a site currently used for this purpose, Llantwit Major Comprehensive School. It is within walking/cycling distance of existing facilities and public transport services; approximately 150m away from the nearest bus stops along Boverton Road and Ham Lane East. Llantwit Major is well served by a number of buses (X5, X45, X91, 95, 145, 146, V1, V2, M1) which provide services to Cardiff, Barry, Bridgend and Cowbridge. Llantwit Major train station is located around 750m away. Due to the sites proposed educational use, development would have a significant positive impact on reducing the causes of deprivation and there could be potential for local employment opportunities, although this would be limited.

## SA Assessment: Criteria: Land to the South of Junction 34, M4 Hensol

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |
| Development at the site would have positive and negative impacts on sustainability  | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria   | Effect   |
|---|---|---|----------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | The site has been promoted for employment uses and therefore would not contribute to housing need within the Vale of Glamorgan.   | <b>0</b> |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | <p>The site has been promoted for employment uses and would therefore not contribute to furthering the range of local facilities within this area.</p> <p>The site is located south of junction 34 of the M4 at Miskin and adjoins the former Bosch factory; the proposal would not lead to a loss of a community facility.</p> <p>Due to the proposed use the potential to</p> | <b>0</b> |

|  |   |  |            |
|--|---|--|------------|
|  |   | provide community facilities is limited.   |            |
| <b>3. To maintain and improve access for all</b> | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | <p>The site is located south of junction 34 of the M4 at Miskin and adjoins the former Bosch factory. The sites location in relation to the M4 motorway allows it to be easily accessed on a regional scale.</p> <p>The site is somewhat isolated from surrounding settlements with limited access to sustainable transport. The 320 bus service to Cardiff and Talbot Green currently serves the Hensol area, albeit a restricted service, however a bus stop serving this bus is not within walking/cycling distance of the site. This is somewhat limited however if the site is allocated for development there may be scope to increase the frequency of these services if funding were available.</p> <p>The site is located in an area characterised by employment uses and there is little by way of local facilities that would initiate shorter trips by walking or cycling. Future occupiers would therefore largely be reliant upon private transport or the limited bus services to access these services however it is considered that commuting distances for employment sites are not significant.</p> | <b>+/-</b> |
| <b>4. Reduce the causes of deprivation</b>       | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation. | Development of this site would have a significantly positive impact on reducing the causes of deprivation given the scale of the site and its promotion for employment development. Due to the sites large size the effects of its development would be felt regionally due to the level of employment that would be created.  | <b>++</b>  |

|   |  |   |    |
|---|--|---|----|
| <b>5. To maintain, protect and enhance community spirit</b>               | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>   | <p>The site would not lead to a coalescence of settlements or result in a loss of recreational land or a community facility.</p>  | +  |
| <b>6. To minimise the causes and manage the effects of climate change</b> | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> <p>The site is capable of incorporating renewable energy sources or energy conservation measures</p> | <p>Given the scale of the proposal the primary impact on climate change would be the trip generations resulting from the employment use (journey to work/servicing). The site is somewhat isolated with relatively limited sustainable transport therefore future occupiers would be largely reliant upon private transport to access the services and facilities that might be required.</p> <p>Parts of the site are within C2 flood zones and B flood zones. A FCA has been undertaken by Environmental Resources Management (ERM) which acknowledges that the type of development proposed for this site can be suitable and permissible within Flood Zones A, B and C, due to its classification as 'Less Vulnerable' under TAN15.</p> <p>The site could be capable of incorporating renewable energy sources or energy conservation measures.</p> | -  |
| <b>7. To minimise waste</b>   | <p>The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).</p>   | <p>The development would generate significant additional waste due to its proposed use and large size.</p>  | -- |
| <b>8. To use land effectively and efficiently</b>                         | <p>The site is a brownfield site and / or involves the beneficial re-use of existing buildings.</p> <p>The site is capable of accommodating high density development</p>   | <p>The site is greenfield land adjoining the former Bosch Factory Site. It does not involve the re-use of existing buildings.</p> <p>The site is capable of accommodating medium density development given the nature of the surrounding area and its proposed employment use.</p>  | -  |

|  |   |   |    |
|--|---|---|----|
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>The site lies within the Ely Valley and Ridge Slopes SLA; development would therefore have negative landscape impacts.</p> <p>The site has a number of significant Tree Preservation Order (TPO) clusters covering it and a small area of the southern edge lies within a SSSI designation; Ely Valley. If the proposed development is allocated, significant mitigation would be required through on site or off site compensation.</p>   | -- |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>Given that the site has been promoted for employment uses it is unlikely that a high quality environment will result.</p>  | 0  |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | <p>The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).</p>  | <p>GGAT have advised that an archaeological evaluation will be required in determining any planning application and that this may lead to development being avoided in certain areas.</p>   | ?  |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p>   | <p>The site is located within an area characterised by employment uses. It is isolated from existing settlements with limited access to sustainable transport however site access via the M4 provides sufficient regional links.</p> <p>There is little by way of local facilities that would initiate shorter trips by walking or cycling. Future occupiers of the site would therefore be largely reliant upon private transport to access any services and facilities that might be required however commuting distances are not considered to be significant for employment uses.</p> | -  |
| <b>13. To provide for a diverse and wide range of local job</b>  | <p>The proposal is for new employment development</p>   | <p>The proposal is for new employment development and would not result in a loss of employment land. Due to the sites large size a</p>  | ++ |

|   |  |  |          |
|---|--|--|----------|
| <b>opportunities</b>  | The site would not result in a loss of employment land that has been identified as having a continued economic role. | significant number of jobs will be created providing employment opportunities on a regional scale.         |          |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b> | The site is located either within a centre, edge of centre or an out of town location.                               | The development would not impact upon the viability of the Vales town centres.                             | <b>0</b> |
| <b>15. To promote appropriate tourism</b>   | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility.   | The proposal would not contribute to the promotion or development of tourism within the Vale of Glamorgan. | <b>0</b> |

### SA Summary Comments

This Greenfield site promoted for employment is located south of junction 34 of the M4 at Miskin and adjoins the former Bosch factory. The site is located in an area characterised by employment uses and there is limited sustainable transport therefore future occupiers would largely be reliant upon private transport.

Development of this site would have a significant positive impact on reducing the causes of deprivation given the scale of the site and its promotion for employment development. Due to the sites large size the effects of its development would be felt regionally due to the level of employment that would be created. Parts of the site are within C2 flood zones and B flood zones. An FCA has been undertaken by Environmental Resources Management (ERM) which acknowledges that the type of development proposed for this site can be suitable and permissible within Flood Zones A, B and C, due to its classification as 'Less Vulnerable' under TAN15. A number of nature designations are located within the proposed site. It lies within the Ely Valley and Ridge Slopes SLA, there are a number of Tree Preservation Orders (TPOs) clusters covering the site, and a small area of the southern edge lies within a SSSI designation; Ely Valley. If the proposed development is allocated, significant mitigation is required through on site or off site compensation.

## SA Assessment: Land Adjacent to Cardiff Airport and Port Road, Rhoose

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |
| Development at the site would have positive and negative impacts on sustainability  | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria  | Effect   |
|---|---|--|----------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | <p>This strategic site has been promoted for a number of commercial, transport and leisure uses including:</p> <p>(i) Aerospace related employment in the form of B1, B2 (appropriate manufacturing, research and development) and B8 uses (delivered in two phases).</p> <p>(iii) New rail link to Cardiff Airport with a bus - rail interchange.</p> <p>(iii) 42 hectare extension to Porthkerry County Park</p> | <b>0</b> |

|  |  |  |                  |
|--|--|--|------------------|
| <b>2. To maintain, promote and enhance the range of local facilities</b> | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p> | <p>The site has the potential to provide additional facilities such as a conference centre and leisure facilities although these would be detached from existing communities.</p> <p>Development of the site would not result in the loss of a community facility.</p>   | <p><b>+</b></p>  |
| <b>3. To maintain and improve access for all</b>                         | <p>Existing services and facilities are easily accessible from the site by walking, cycling or public transport.</p>   | <p>The site adjoins Cardiff Airport, Port Road and lies to the east of Porthkerry Road.</p> <p>Initial highway observations consider that safe and suitable access can be provided.</p> <p>Furthermore, the employment scheme proposed is in conjunction with a new rail link to Cardiff Airport. The proposal includes the provision of a new railway line connecting Cardiff Central to Cardiff Airport. A target of 4 trains per hour has been proposed with a journey time of 18-35 minutes.</p> <p>Although slightly detached from existing built up areas the site has the potential to provide walk or cycle facilities and commuting distances are not considered significant for employment uses.</p> <p>Rhoose is currently relatively well served by public transport by virtue of its location along a main highway. The village is served by the X5, X45, X91, 95, V5 and M1 bus services. A number of bus stops are accessible from the site along Porthkerry and Port Road. Furthermore, the Transport Hub proposal will only serve to improve public transport access.</p> | <p><b>++</b></p> |

|   |  |  |              |
|---|--|--|--------------|
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.                | The immediate area has relatively low multiple deprivation, however there are a number of more deprived wards are within short commuting distance in Barry.<br><br>Given the scale of the proposal and the sites promotion for commercial / employment uses development of the site is likely to realise a positive effect on multiple deprivation. Furthermore, as a strategic employment site the proposals could realise positive effects on deprivation across the region.   | <b>++</b>    |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.  | Part of the site forms part of the established Cardiff Airport business park and roughly half lies to the east of Porthkerry Road.<br><br>Although development of the land adjoining Port Road [phase II] will encroach into the countryside between Rhoose / Cardiff Airport and west Barry the site boundaries limit the potential unacceptable impacts upon the open countryside as they retain an undeveloped buffer of 1.3km with Barry.<br><br>Furthermore, the 42 hectare extension to Porthkerry Country Park will limit the potential impact upon the areas sensitive coastal and countryside setting.<br><br>Development of the site would not lead to loss of a community facility. | <b>+ / -</b> |
| <b>6. To minimise the causes and manage the effects of climate change</b> | The site would not increase the need to travel and or increase travel distances<br><br>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources | Initial highway observations consider that safe and suitable access can be provided.<br><br>Furthermore, the employment scheme proposed is in conjunction with a new rail link to Cardiff Airport. | <b>13. To provide for a diverse and wide range of local job opportunities</b>                   | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p> | <p>The proposal is predominantly for commercial and business uses and the provision of a new rail service that connects Cardiff Central with Cardiff Airport. Its development has the potential to provide a significant amount of accessible employment opportunities.</p> <p>The site would not result in a loss of employment land.</p>  | <b>++</b> |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b> | <p>The site is located either within a centre, edge of centre or an out of town location.</p>   | <p>The site is not located within or directly adjacent to an existing town or district retail centre.</p>   | <b>0</b>  |
| <b>15. To promote appropriate tourism</b>   | <p>The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility.</p>   | <p>The proposal is predominantly for commercial and business uses but also includes potential for a hotel, conference and leisure facilities indirectly related to the Cardiff Airport. Therefore development of the site may have a minor positive impact on tourism in the wider area given its location to the airport.</p>  | <b>+</b>  |

Effect Summary Table

| ++ | + | 0 | - | -- | +/- | ? |
|----|---|---|---|----|-----|---|
| 4  | 3 | 2 | 1 | 2  | 3   | 0 |

SA Summary Comments

The site has been promoted for a number of business and commercial uses to be directly and indirectly related to the airport including a range of business units and a hotel including leisure and conference facilities and the provision of a new railway line with station, connecting Cardiff Central to Cardiff Airport.

The site scores a mixture of results against the sustainability objectives with more positives than negatives. The positive effects arise from the provision of additional employment land, the potential positive effects upon tourism and the developments impact upon multiple deprivation. It is considered that the site is accessible by sustainable transport modes and that commuting distances at this location would not be significant. The provisions of a new rail way link connecting Cardiff Central to Cardiff airport will potentially extend the airports catchment area and significantly increase the use of public transport both to and from the airport.

The negative effects primarily relate to impacts of developing a large, visible Greenfield site within an area that forms part of the undeveloped green buffer between Rhoose and Barry.

## SA Assessment: Aerospace Business Park St Athan

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site would have positive and negative impacts on sustainability.   | +/-    |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria  | Effect |
|---|---|--|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | <p>The site has not been promoted solely for Affordable Housing.</p> <p>Residential development forms part of candidate site submission for service family accommodation associated with MoD activities at St Athan. Planning conditions have been placed on granted planning permission which ensure that the SFA becomes surplus to the needs of the MoD an element of this housing would become affordable housing. This housing would contribute to meeting affordable housing needs within the coastal housing market area.</p> | +      |

|  |  |   |           |
|--|--|---|-----------|
| <b>2. To maintain, promote and enhance the range of local facilities</b> | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p> | <p>The enhancement of ST Athan MoD provides the opportunity for enhanced community, leisure and recreation facilities, as identified within the approved outline planning permission.</p>   | <b>++</b> |
| <b>3. To maintain and improve access for all</b>                         | <p>Existing services and facilities are easily accessible from the site by walking, cycling or public transport.</p>   | <p>The proposal would offer a range of services and facilities for military staff. Additional opportunities for enhanced public transport services and walking and cycling facilities have been identified. ( Defence Technical College and Aerospace Business Park - St Athan Transport Assessment, May 2009)</p>  | <b>+</b>  |
| <b>4. Reduce the causes of deprivation</b>                               | <p>The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.</p>         | <p>Enhanced operations at RAF St Athan will provide the opportunity for residents to access employment opportunities. It is envisaged that employment opportunities would also extend to residents living elsewhere within the Vale.</p> <p>The scale of investment within the local area will have positive economic and social impacts for the Vale and also regionally.</p> <p>Information on the potential economic impact is contained with the Defence Training College and Aerospace Business Park St Athan Final Economic Impact Assessment Report (May 2009)</p> | <b>++</b> |
| <b>5. To maintain, protect and enhance community spirit</b>              | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>   | <p>The site would not lead to settlement coalescence or would result in a loss of recreational land.</p>  | <b>+</b>  |

|  |  |   |                   |
|--|--|---|-------------------|
| <p><b>6. To minimise the causes and manage the effects of climate change</b></p> | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> <p>The site is capable of incorporating renewable energy sources or energy conservation measures</p> | <p>Enhanced operations at RAF St Athan will provide the opportunity for residents to access employment opportunities. It is envisaged that employment opportunities would also extend to residents living elsewhere within the Vale. Whilst this would see an increase in travel demand to St Athan, it may mean that for residents in the Vale travel distances are shorter.</p> <p>The Environment Agency has confirmed that the site partially lies within a C2 flood zone. A detailed Strategic Flood Consequence Assessment has been undertaken which identifies appropriate flood mitigation measures. (Defence Technical College and Aerospace Business Park - St Athan, Flood Consequence Assessment May 2009)</p> <p>Residential development will be required to meet existing energy efficiency standards. Opportunities for on site renewables have been identified. (Defence Technical College St Athan, Sustainability &amp; Energy Statement, May 2009)</p> | <p><b>+/-</b></p> |
| <p><b>7. To minimise waste</b></p>   | <p>The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).</p>   | <p>Whilst the proposal would realise significant waste arisings, detailed waste management measures have been identified to handle this in a sustainable manner. (Defence Training College St Athan, Waste Management Strategy). Accordingly a single negative is realised.</p>   | <p><b>-</b></p>   |
| <p><b>8. To use land effectively and efficiently</b></p>                         | <p>The site is a brownfield site and / or involves the beneficial re-use of existing buildings.</p> <p>The site is capable of accommodating high density development</p>   | <p>The candidate site area consists of a large proportion of brownfield land currently in use by the MoD.</p> <p>The agricultural land classification survey covering the proposal has identified sub-Grades 3a and 3b and Grade 4 and Grade 5 land over. Some areas associated with the</p>  | <p><b>+/-</b></p> |

|  |   |  |          |
|--|---|--|----------|
|  |   | <p>activities of the MoD will not entail any built development and therefore would limit the loss of agricultural land. (See Agricultural Land Classification Report, Defence Training College, August 2009)</p> <p>It is likely that built development would be high density.</p>   |          |
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>Within the candidate site boundary are a number of built and natural environmental designations.</p> <p>Present proposals would involve the enhancement of St Brise Church- grade II listed building.</p> <p>Detailed mitigation measures have been identified in association with any proposals affecting these designations, including enhancement of nature conservation interests.</p> <p>(See Defence Technical College and Aerospace Business Park - St Athan, Ecology Strategy May 2009)</p> | <b>+</b> |
| <b>10. To provide a high quality environment within all new developments</b>   | The development has the potential to support high quality public realm.   | Proposals within the development itself would provide the opportunity to support high quality public realm. There is also additional scope to enhance the public realm associated with any areas publicly accessible.  | <b>+</b> |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).   | <p>Within the candidate site boundary are a number of built and natural environmental designations.</p> <p>Present proposals would involve the enhancement of St Brise Church- grade II listed building.</p> <p>Detailed mitigation measures have been identified in association with any proposals affecting these designations, including</p>  | <b>+</b> |

|   |   |   |            |
|---|---|---|------------|
|   |   | enhancement of nature conservation interests.(Defence Technical College and Aerospace Business Park - St Athan, Ecology Strategy May 2009)  |            |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b> | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p> | The proposal would offer a range of services and facilities for military staff. Additional opportunities for enhanced public transport services and walking and cycling facilities have been identified. ( Defence Technical College and Aerospace Business Park - St Athan Transport Assessment, May 2009)   | <b>+/-</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>                     | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>                           | <p>Enhanced operations at RAF St Athan will provide the opportunity for residents to access employment opportunities. It is envisaged that employment opportunities would also extend to residents living elsewhere within the Vale.</p> <p>The scale of investment within the local area will have positive economic and social impacts for the Vale and also regionally.</p> <p>Information on the potential economic impact is contained with the Defence Training College and Aerospace Business Park St Athan Final Economic Impact Assessment Report (May 2009)</p> | <b>++</b>  |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b>   | The site is located either within a centre, edge of centre or an out of town location.  | It is likely that development would support existing services and facilities with Llantwit Major which is a district retail centre. Additional support may also be given to services within St Athan and more localised services to be found within West Camp.  | <b>+</b>   |
| <b>15. To promote appropriate tourism</b>   | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility.  | Present proposals include tourism accommodation and museum.   | <b>+</b>   |

Effect Summary Table

| ++ | + | 0 | +/- | - | -- | ? |
|----|---|---|-----|---|----|---|
| 3  | 8 | 0 | 3   | 1 | 0  | 0 |

SA Summary Comments

The SA of the proposals as submitted for MoD St Athan scores positively across a range of SA objectives associated with social and economic factors which is expected for a development of the scale and type as proposed. These positive factors related to likely benefits accrued for those living within close proximity that would benefit to likely enhanced community facilities and services, and to the wider Vale resulting from potential new sources of employment.

As a result of the detailed case background information undertaken as part of the outline permission for the area associated with candidate site it has been possible to identify mitigation measures associated with negative impacts of development. Consequently this has significantly reduced number of negative impacts that would otherwise be expected for a development of this scale. Of those identified these relate to the generation of waste- common with all developments, however this has been limited to a single negative due to the potential for the sustainable management of waste identified within the Waste Strategy study. Additional negative is the potential for increased number of journeys to St Athan as a result of increased employment opportunities. However this may also realise shorter travel distances for Vale residents.

Further detailed information is referenced within the SA assessment, and is available via the Council's website:

[http://www.valeofglamorgan.gov.uk/living/planning/planning\\_applications/defence\\_technical\\_college/transport\\_assessment.aspx](http://www.valeofglamorgan.gov.uk/living/planning/planning_applications/defence_technical_college/transport_assessment.aspx)

A separate SA of the proposals has been undertaken as a part of the initial outline planning permission. This Environmental Report highlights any significant environment affects of the development and appropriate mitigation:

[http://www.valeofglamorgan.gov.uk/living/planning/planning\\_applications/defence\\_technical\\_college/environmental\\_statement.aspx](http://www.valeofglamorgan.gov.uk/living/planning/planning_applications/defence_technical_college/environmental_statement.aspx)

## SA Assessment Criteria: Atlantic Trading Estate (Employment Allocation)

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |
| Development at the site would have positive and negative impacts on sustainability  | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria   | Effect   |
|---|---|---|----------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | The site has been promoted for employment uses and would therefore not contribute to housing need within the Vale of Glamorgan.   | <b>0</b> |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | <p>The site has been promoted for employment uses and would therefore not contribute to furthering the range of local facilities within this area of Barry. However development of the site could possibly enable enhancements to bus services that could benefit the local community.</p> <p>The site was formerly part of a Ministry of Defence Depot located to the south of the No.2 Dock in Barry. Development as proposed</p> | <b>0</b> |

|   |   |   |            |
|---|---|---|------------|
|   |   | <p>would not result in the loss of a community facility.</p> <p>If developed as proposed, there is potential for the provision of enhanced or new community facilities e.g. contributions towards sustainable transport, improved pedestrian footways, etc.</p>   |            |
| <b>3. To maintain and improve access for all</b>            | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | <p>Access to sustainable transport from this site is somewhat limited. The nearest bus stops are approximately 500 metres away from the site and these are served by three local bus services (86, 88 &amp; 94). However these operate what could at best be termed an intermittent service (one service is weekly) to Barry and Penarth although there may be scope to increase the frequency of these services if funding were available.</p> <p>The site is located in an area characterised by employment uses and there is little by way of local facilities that would initiate shorter trips by walking or cycling. Future occupiers would therefore largely be reliant upon private transport or the limited bus services however commuting distances are not considered significant for employment uses.</p> | <b>+/-</b> |
| <b>4. Reduce the causes of deprivation</b>                  | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation. | Positive impact on reducing causes of deprivation given the scale of the site and its promotion for employment development close to areas of relatively high multiple deprivations.   | <b>++</b>  |
| <b>5. To maintain, protect and enhance community spirit</b> | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>  | <p>This site is a previously developed brownfield site to the south west of Dow Corning Industrial / Chemical complex. It is detached from Sully village and the residential areas of Barry. Given the site has previously been developed and the industrial nature of the area it is unlikely that development of this site will lead to coalescence.</p> <p>Development of the site would not result in the</p>   | <b>+</b>   |

|   |  |  |   |
|---|--|--|---|
|   |  | loss of a community facility and has the potential to provide new facilities.  |   |
| <b>6. To minimise the causes and manage the effects of climate change</b> | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> <p>The site is capable of incorporating renewable energy sources or energy conservation measures</p> | <p>Given the scale of the proposal the primary impact on climate change would be the trip generations resulting from the employment use (journey to work/servicing). In this regard, although located on the outskirts of Barry, this is an isolated site with limited access to sustainable transport. The three local bus services (86, 88 &amp; 94) that operate in this area provide an intermittent service to Barry and Penarth and future occupiers would be largely reliant upon private transport to access the services and facilities that might be required.</p> <p>Around half the site lies within a C2 flood risk zone and it is recommended that further development of this site is subject to consultation with the Environment Agency and a detailed FCA.</p> <p>There is potential for the site to incorporate renewable energy sources or energy conservation measures.</p> | - |
| <b>7. To minimise waste</b>   | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).  | The proposed development will generate additional waste.   | - |
| <b>8. To use land effectively and efficiently</b>                         | <p>The site is a brownfield site and / or involves the beneficial re-use of existing buildings.</p> <p>The site is capable of accommodating high density development</p>   | <p>The site is a previously developed brownfield site to the south west of the Dow Corning Industrial / Chemical complex.</p> <p>The site is capable of accommodating medium density development given the nature of the surrounding area.</p>   | + |

|  |   |   |            |
|--|---|---|------------|
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>The site has been identified to contain a significant archaeological resource, including Bronze Age settlement and Early Medieval burials. An archaeological evaluation of the site will be required and it may be determined that some parts of the site cannot be developed.</p>   | -          |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>Given that the site has been promoted for employment uses it is unlikely that a high quality environment will result.</p>  | <b>0</b>   |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | <p>The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).</p>  | <p>The site has been identified to contain a significant archaeological resource, including Bronze Age settlement and Early Medieval burials. An archaeological evaluation of the site will be required and it may be determined that some parts of the site cannot be developed. It is not located within or adjacent to a conservation area or listed building.</p>   | -          |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p>   | <p>While located on the outskirts of Barry this location has limited access to sustainable transport. The three local bus services (86,88 &amp; 94) that operate in this area provide what could be at best termed an intermittent service to Barry and Penarth that would not facilitate the level of service required for an employment site.</p> <p>The site is located to the south west of the Dow Corning Chemical Complex in an area characterised by employment uses. Although slightly detached from existing built up areas the site has the potential to provide improved public transport however commuting distances are not considered significant for employment uses.</p> | <b>+/-</b> |

|   |  |  |           |
|---|--|--|-----------|
| <b>13. To provide for a diverse and wide range of local job opportunities</b>                   | The proposal is for new employment development<br><br>The site would not result in a loss of employment land that has been identified as having a continued economic role. | The site is allocated as an employment site and relates to other employment allocations within the vicinity. Development as proposed would further enhance the employment opportunities within the local area. | <b>++</b> |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b> | The site is located either within a centre, edge of centre or an out of town location.   | The development would not impact upon the viability of the Vales town centres.   | <b>0</b>  |
| <b>15. To promote appropriate tourism</b>   | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility.   | The proposal would not contribute to the promotion or development of tourism within the Vale of Glamorgan.   | <b>0</b>  |

### Effect Summary Table

| <b>++</b> | <b>+</b> | <b>0</b> | <b>-</b> | <b>--</b> | <b>+ /-</b> | <b>?</b> |
|-----------|----------|----------|----------|-----------|-------------|----------|
| <b>2</b>  | <b>2</b> | <b>5</b> | <b>4</b> | <b>0</b>  | <b>2</b>    | <b>0</b> |

### SA Summary Comments

The site has been promoted for employment use and is located to the south east of Barry, south west of the Dow Corning Industrial / Chemical Complex. Frequency of public transport to this site is limited and it is likely that the majority of trips of future employees will be by private transport. However as the proposed use is employment, commuting distances are not considered significant. The site has been identified to contain a significant archaeological resource, including Bronze Age settlement and Early Medieval burials. An archaeological evaluation of the site will be required and it may be determined that some parts of the site cannot be developed.

Around half the site is covered by a C2 flood risk zone; therefore it is recommended that further development of this site is subject to consultation with the Environment Agency and a detailed FCA.

## SA Assessment: Land at Ffordd Mileniwm, Barry

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |

### SA Summary Comments

This 7.8 hectare brownfield site promoted for employment lies adjacent to the Ffordd y Mileniwm Way, the main access point to the strategically important Barry Waterfront Redevelopment. The site is within walking/cycling distance of the Barry Docks rail station and approximately 1km away from the nearest bus stop. Barry waterfront is served by bus service 90 to Culverhouse cross on an hourly basis everyday and a number of other services (X45, 88, 90, 94, 95, 96, 322, B3, M1) run from nearby Morrison's supermarket to various destinations. Due to the proposed use the need to travel will be increased and future occupiers would be largely reliant upon private transport. The GGAT advises that archaeological resources are contained within the area and that an archaeological evaluation of the site will be required, which may result in some parts of the site unable to be developed. The site lies within a B flood risk zone and adjacent to an area of C2 flood risk. If development is to take place it is recommended to consult with the Environment Agency as part of the site lies within 250m of a former landfill site and that flood defence levels are raised to a minimum of 8.6 AOD.

## SA Assessment: Hayes Lane, Sully

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |
| Development at the site would have positive and negative impacts on sustainability  | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria  | Effect   |
|---|---|--|----------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | The site has been promoted for employment uses and would therefore not contribute to housing need within the Vale of Glamorgan.  | <b>0</b> |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | <p>The site has been promoted for employment uses and therefore would not contribute to furthering the range of local facilities within this area of Barry. However development of the site could possibly enable enhancements to bus services that could benefit the local community.</p> <p>The site is a former scrap yard with and development as proposed would not result in</p> | <b>0</b> |

|  |   |  |            |
|--|---|--|------------|
|  |   | <p>the loss of a community facility.</p> <p>If developed as proposed, there is potential for the provision of enhanced or new community facilities e.g. contributions towards sustainable transport, improved pedestrian footways, etc. However given the scale of the proposed development any provision is likely to be limited.</p>   |            |
| <b>3. To maintain and improve access for all</b> | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | <p>Access to sustainable transport from this site is somewhat limited. The nearest bus stops are approximately 500 metres away from the site and these are served by three local bus services (86, 88 &amp; 94). However these operate what could at best be termed an intermittent service (one service is weekly) to Barry and Penarth although there may be scope to increase the frequency of these services if funding were available.</p> <p>The site is located south west of the Dow Corning Chemical Complex in an area characterised by employment uses and there is little by way of local facilities that would initiate shorter trips by walking or cycling. Future occupiers would therefore largely be reliant upon private transport or the limited bus services to access for journey to work trips. Although slightly detached from existing built up areas the site has the potential to provide walk or cycle facilities and commuting distances are not considered significant for employment uses.</p> | <b>+/-</b> |
| <b>4. Reduce the causes of deprivation</b>       | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation. | Minor positive impact on reducing the causes of deprivation given that the site has been promoted for employment and would provide local jobs within an area ranked low in terms of the indices of multiple deprivations.  | <b>+</b>   |

|   |  |   |          |
|---|--|---|----------|
| <b>5. To maintain, protect and enhance community spirit</b>               | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>   | <p>Development would not lead to coalescence given that the site is located on the outskirts of Barry in an area characterised by employment uses.</p> <p>The proposal would not result in the loss of recreational or community facilities.</p>  | <b>0</b> |
| <b>6. To minimise the causes and manage the effects of climate change</b> | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> <p>The site is capable of incorporating renewable energy sources or energy conservation measures</p> | <p>Given the scale of the proposal the primary impact on climate change would be the trip generations resulting from the employment use (journey to work/servicing) and the site has limited access to sustainable transport. The three local bus services (86, 88 &amp; 94) that operate in this area provide an intermittent service to Barry and Penarth and future occupiers would be largely reliant upon private transport to access the services and facilities that might be required. Although this is the case, commuting distances are not considered significant for employment uses.</p> <p>The site is not located within an area prone to flood risk and there could be scope for the incorporation of renewable energy sources or energy conservation measures.</p> | <b>+</b> |
| <b>7. To minimise waste</b>   | <p>The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).</p>   | <p>Development as proposed would generate additional commercial/industrial waste however the scale of this generation would depend upon the nature of the employment use.</p>   | <b>-</b> |
| <b>8. To use land effectively and efficiently</b>                         | <p>The site is a brownfield site and / or involves the beneficial re-use of existing buildings.</p> <p>The site is capable of accommodating high density development</p>   | <p>This is a brownfield site. Medium density development would be in keeping with the character of surroundings.</p>  | <b>+</b> |

|  |   |  |            |
|--|---|--|------------|
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>There is a significant block of ancient woodland located adjacent to the site to the east that affords significant local amenity and habitat potential.</p>   | -          |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>Given that the site has been promoted for employment uses it is unlikely that a high quality environment will result.</p>   | <b>0</b>   |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | <p>The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).</p>  | <p>The site is not located within or adjacent to a listed building or conservation area. A large block of ancient woodland is located adjacent to the site to the west.</p>  | -          |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p>   | <p>While located on the outskirts of Barry this location has limited access to sustainable transport. The three local bus services (86,88 &amp; 94) that operate in this area provide what could be at best termed an intermittent service to Barry and Penarth that would not facilitate the level of service required for an employment site.</p> <p>The site is located to the south west of the Dow Corning Chemical Complex in an area characterised by employment uses. Although slightly detached from existing built up areas the site has the potential to provide improved public transport, however commuting distances are not considered significant for employment uses.</p> | <b>+/-</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>   | <p>The site is allocated as an employment site and relates well to other employment allocations within the vicinity. Development as proposed would further enhance the employment opportunities within the local area.</p>   | <b>++</b>  |

|   |  |  |          |
|---|--|--|----------|
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b> | The site is located either within a centre, edge of centre or an out of town location.                             | The development would not impact upon the viability of the Vales town centres.                             | <b>0</b> |
| <b>15. To promote appropriate tourism</b>   | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility. | The proposal would not contribute to the promotion or development of tourism within the Vale of Glamorgan. | <b>0</b> |

### Effect Summary Table

| ++ | + | 0 | - | -- | +/- | ? |
|----|---|---|---|----|-----|---|
| 1  | 3 | 6 | 3 | 0  | 2   | 0 |

### SA Summary Comments

The site has been promoted for employment uses that have yet to be defined and is located to the south east of Barry. There is a limited/infrequent bus service close to the site. It is likely that the majority of trips of future employees will be by private transport however commuting distances are not considered significant for employment uses.

There are a number of local designations nearby however given the scale of the site and the nature of the designations it is questionable whether there would be any adverse impact upon the designated sites or buildings however an intensification of uses close to the woodland designation could have an adverse impact. The development of the site would contribute to local employment opportunities however the scale would again depend upon the nature of the employment use.

Overall the assessment realises a balanced assessment against the sustainability objectives with strong positive scores being derived from the existing use of a brownfield site for employment and negative scores resulting from the location of the site. Given that this is a UDP allocated employment site it is considered that its future use will be determined by the employment need with the Vale as evidenced by the employment land study.

## SA Assessment: Hayes Road, Sully

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |

### SA Summary Comments

This site is located to the west of Sully in a coastal location between the village and the Dow Corning industrial / chemical complex in Barry. The candidate site has been promoted for employment use and is a previous employment allocation for B1 uses. It would be possible to walk and cycle to existing services and facilities the site is detached from Sully village and located roughly 1km away from the village centre however commuting distances are not considered significant for employment uses. Notwithstanding this, the area is relatively well served by the 88 and 86 bus services; bus stops which serve these routes are located roughly 500 metres away from the site on South Road and Hayes Road.

The site is located adjacent to the Bendricks Rock Site of Special Scientific Interest (SSSI) however it is considered that its development is unlikely to impact upon this designation. The Environment Agency has advised that the site lies on historic landfill which previously house underground storage tanks (UST) and there is the potential for land contamination. A small part of the site along the northern boundary lies within a C2 flood zone and the entire southern boundary lies adjacent to a C2 flood zone. It should also be noted an undeveloped coastal buffer of 2ha is required which would bring the developable area to around 5.3 hectares.

| The impact of an issue cannot be predicted at this stage  | ?      |
| Development at the site would have positive and negative impacts on sustainability  | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria   | Effect   |
|---|---|---|----------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | The site has been promoted for employment uses and would therefore not contribute to housing need within the Vale of Glamorgan.   | <b>0</b> |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | <p>The site has been promoted for employment uses and would therefore not contribute to furthering the range of local facilities within this area of Barry. However development of the site could possibly enable enhancements to bus services that could benefit the local community.</p> <p>The site is currently vacant with and development as proposed would not result in</p> | <b>+</b> |

|   |  |  |           |
|---|--|--|-----------|
|   |  | <p>the loss of a community facility.</p> <p>If developed as proposed, there is potential for the provision of enhanced or new community facilities e.g. contributions towards sustainable transport, improved pedestrian footways, etc. However given the scale of the proposed development any provision is likely to be limited.</p>   |           |
| <p><b>3. To maintain and improve access for all</b></p> | <p>Existing services and facilities are easily accessible from the site by walking, cycling or public transport.</p>   | <p>While located on the outskirts of Barry the site is in an isolated location with access to limited levels of sustainable transport.</p> <p>The nearest bus stops are some 200 metres away from the site and these are served by three local bus services (86, 88 &amp; 94). However these operate what could at best be termed an intermittent service (one service is weekly) to Barry and Penarth although there may be scope to increase the frequency of these services if funding were available.</p> <p>The site is located on the southern edge of the Dow Corning Chemical Complex in an area characterised by employment uses and there is little by way of local facilities that would initiate shorter trips by walking or cycling. Future occupiers would therefore largely be reliant upon private transport or the limited bus services to access for journey to work trips.</p> <p>Dependent upon the nature of the employment use potential for significant delivery trips.</p> | <p>--</p> |
| <p><b>4. Reduce the causes of deprivation</b></p>       | <p>The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.</p> | <p>Minor positive impact on reducing the causes of deprivation given that the site has been promoted for employment and would provide local jobs within an area ranked low in terms of the indices of multiple deprivation.</p>  | <p>+</p>  |

|   |  |   |           |
|---|--|---|-----------|
| <b>5. To maintain, protect and enhance community spirit</b>               | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>   | <p>Development would not lead to coalescence given that the site is located on the outskirts of Barry in an area characterised by employment uses.</p> <p>The proposal would not result in the loss of recreational or community facilities.</p>  | <b>0</b>  |
| <b>6. To minimise the causes and manage the effects of climate change</b> | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> <p>The site is capable of incorporating renewable energy sources or energy conservation measures</p> | <p>Given the scale of the proposal the primary impact on climate change would be the trip generations resulting from the employment use (journey to work/servicing). In this regard, although located on the outskirts of Barry, this is an isolated site with limited access to sustainable transport. The three local bus services (86, 88 &amp; 94) that operate in this area provide an intermittent service to Barry and Penarth and future occupiers would be largely reliant upon private transport to access the services and facilities that might be required.</p> <p>A small band of surface water flooding crosses site.</p> <p>Site design could incorporate small scale renewable initiatives to serve the site infrastructure e.g. micro power generation. Commercial properties would be required to comply with current energy efficiency standards.</p> | <b>-</b>  |
| <b>7. To minimise waste</b>   | <p>The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).</p>   | <p>Development as proposed would generate additional commercial/industrial waste however the scale of this generation would depend upon the nature of the employment use.</p>   | <b>-</b>  |
| <b>8. To use land effectively and efficiently</b>                         | <p>The site is a brownfield site and / or involves the beneficial re-use of existing buildings.</p> <p>The site is capable of accommodating high density development</p>   | <p>This is a vacant brownfield employment site that has become overgrown. High density development would not be in keeping with the character of surroundings.</p>  | <b>++</b> |

|  |   |  |           |
|--|---|--|-----------|
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>The site is in close proximity to the Grade 2* listed building of Sully Hospital although it is not considered that development as proposed would adversely impact upon this designation.</p> <p>The site is overgrown and offers potential for local habitats on unimproved ground. In addition there is a significant block of ancient woodland located adjacent to the site to the south/east that affords significant local amenity and habitat potential.</p>  | <p>?</p>  |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>Given that the site has been promoted for employment uses it is unlikely that a high quality environment will result.</p>   | <p>0</p>  |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | <p>The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).</p>  | <p>The site is located close to the Bendricks Rock Site of Special Scientific Interest however as a geological SSSI the development of the site is unlikely to have a major impact upon this designation.</p> <p>The site is in close proximity to the Grade 2* listed Sully Hospital Building and grounds although it is not considered that the proposed use would adversely impact upon this designation.</p> <p>A large block of ancient woodland is located adjacent to the site to the south/east.</p> | <p>?</p>  |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p>   | <p>While located on the outskirts of Barry this is an isolated location with limited access to sustainable transport. The three local bus services (86,88 &amp; 94) that operate in this area provide what could be at best termed an intermittent service to Barry and Penarth that would not facilitate the level of service required for an employment site.</p> <p>The site is located on the southern edge of the</p>   | <p>--</p> |

|   |  |   |           |
|---|--|---|-----------|
|   |  | Dow Corning Chemical Complex in an area characterised by employment uses and there is little by way of local facilities that would initiate shorter trips by walking or cycling. Future occupiers of the site would therefore be largely reliant upon private transport to access any services and facilities that might be required. |           |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>                   | The proposal is for new employment development<br><br>The site would not result in a loss of employment land that has been identified as having a continued economic role. | The site is allocated as an employment site (EMP 1(5) Hayes Lane, B1 & B8) and relates well to other employment allocations within the vicinity. Development as proposed would further enhance the employment opportunities within the local area.  | <b>++</b> |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b> | The site is located either within a centre, edge of centre or an out of town location.   | The development would not impact upon the viability of the Vales town centres.  | <b>0</b>  |
| <b>15. To promote appropriate tourism</b>   | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility.   | The proposal would not contribute to the promotion or development of tourism within the Vale of Glamorgan.  | <b>0</b>  |

### SA Summary Comments

The site has been promoted for employment uses that have yet to be defined however the previous UDP allocation was for B1 and B8 uses and it is considered that a similar use will occur. The site is isolated to the south east of Barry with a limited/infrequent bus service close to the site. It is likely that the majority of trips of future employees will be by private transport. Service deliveries will also have an impact. There are a number of local designations nearby however given the scale of the site and the nature of the designations it is questionable whether there would be any adverse impact upon the designated sites or buildings however an

intensification of uses close to the woodland designation could have an adverse impact. The development of the site would contribute to local employment opportunities however the scale would again depend upon the nature of the employment use.

Overall the assessment is a realises a balanced assessment against the sustainability objectives with strong positive scores being derived from the existing use of a brownfield site for employment and negative scores resulting from the location of the site and the potential for future development to adversely impact upon local ecology. Given that this is an allocated employment site it is considered that its future use will be determined by the employment need with the vale as evidenced by the employment land study.

### SA Summary Comments

This brownfield site located at the southern end of the former Llandow Airfield site between Cowbridge and Llantwit Major. It is proposed for employment in an area characterised by this use and includes a significant amount of low-grade density industry. It is located between Cowbridge and Llantwit Major and access is available via the B4270. Its location is somewhat isolated from existing settlements with limited access to sustainable transport; the closest bus stop is at least 1km away and provides the (V1) service which runs Monday to Saturday 5 times per day.

A number of ecological and environmental factors affect the site and if allocated must be considered further. GGAT have advised that an Archaeological Evaluation will be required in determining any planning application for development. A large part of this site is known to affect the carboniferous limestone aquifer from which ground-water is abstracted. Environmental safeguards will be required by the Environment Agency in respect of pollution control and storage of materials. CCW have advised that a maternity

roost of lesser horseshow bats is located within 400m of the site therefore an ecological study must be conducted before any development.

| 1  | 3 | 5 | 3 | 0  | 2   | 1 |

SA Summary Comments

This brownfield site, formerly Llandow Airfield, is proposed for employment in an area characterised by this use; it supports a wide range of industrial and business activities. It is located between Cowbridge and Llantwit Major and access is available via the B4270 within the Vale Business Park. Its location is somewhat isolated from existing settlements. The local bus (V1) provides services Monday to Saturday 5 times per day to Cowbridge and Llantwit Major.

GGAT have advised that an Archaeological Evaluation will be required in determining any planning application for development. A large part of this site is known to affect the carboniferous limestone aquifer from which ground-water is abstracted. Environmental safeguards will be required by the Environment Agency in respect of pollution control and storage of materials.

## SA Assessment Criteria: Land to the west of Ruthin Road St Mary Hill

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |
| Development at the site would have positive and negative impacts on sustainability  | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria  | Effect   |
|---|---|--|----------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | The site is promoted for employment use, therefore will not deliver a mix of housing or affordable housing.  | <b>0</b> |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | <p>The site is promoted for employment use and therefore does not promote community, leisure or recreational facilities. It would not lead to a loss of a community facility.</p> <p>The site does not have the potential to provide community facilities.</p> | <b>0</b> |

|   |   |  |     |
|---|---|--|-----|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | The site is divorced from Fferm Goch which is the nearest village. Although accessible by foot/cycle from the village it is most likely that car journeys would be generated.  | -   |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.   | The proposal wishes to retain its use as an employment site. Employment would assist in addressing deprivation in the area.  | +   |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br>The site would not result in a loss in recreational land or a community facility.   | The development of this site would not lead to a coalescence of settlements or result in a loss of recreational land or community facility.  | +   |
| <b>6. To minimise the causes and manage the effects of climate change</b> | The site would not increase the need to travel and or increase travel distances<br><br>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources<br><br>The site is capable of incorporating renewable energy sources or energy conservation measures | The site would increase the need to travel as it is divorced from the existing village and its services.<br>The site is not affected by flooding.<br>There is scope for the incorporation of energy efficiency or renewable energy measures into the sites development | +/- |
| <b>7. To minimise waste</b>   | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).   | The development would generate waste and does not promote waste management   | -   |
| <b>8. To use land effectively and efficiently</b>                         | The site is a brownfield site and / or involves the beneficial re-use of existing buildings.<br><br>The site is capable of accommodating high density development   | The site is greenfield   | -   |

|  |   |   |           |
|--|---|---|-----------|
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | The proposal does not lie within a special landscape area or conservation area and includes no listed buildings.  | +         |
| <b>10. To provide a high quality environment within all new developments</b>   | The development has the potential to support high quality public realm.   | The site has the potential to support high quality public realm.  | +         |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).   | The site is not located within a nationally or internationally designated ecological site therefore there is no impact  | <b>0</b>  |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p>   | The site is divorced from Fferm Goch which is the nearest village. Although accessible by foot/cycle from the village it is most likely that car journeys would be generated. | -         |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>   | The development is proposed for new employment use.   | <b>++</b> |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b>                      | The site is located either within a centre, edge of centre or an out of town location.  | Not located within a town centre, therefore no impact   | <b>0</b>  |
| <b>15. To promote appropriate tourism</b>  | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility.  | There is no tourism development proposed therefore no impact  | <b>0</b>  |

Effect Summary Table

|           |          |          |          |           |            |          |
|-----------|----------|----------|----------|-----------|------------|----------|
| <b>++</b> | <b>+</b> | <b>0</b> | <b>-</b> | <b>--</b> | <b>+/-</b> | <b>?</b> |
| <b>1</b>  | <b>5</b> | <b>5</b> | <b>2</b> | <b>0</b>  | <b>2</b>   | <b>0</b> |

### SA Summary Comments

The site has scored a number of negative effects. Its location is divorced from the existing village of Fferm Goch affecting the distance to facilities and public transport and this would increase the need to travel. The creation of employment would also generate car use. However as the proposal would replace the existing cattle market car use would not be additional to existing traffic attracted to the existing cattle market. This would also support rural diversification and increase rural employment opportunities.

## SA Assessment: Land to the north of Waycock Cross, Barry

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |
| Development at the site would have positive and negative impacts on sustainability  | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria  | Effect |
|---|---|--|--------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | The site is being considered for a mixed use development of housing and employment. 10ha is to be allocated for employment use within a wider and larger housing allocation. As a large residential development there would be the potential to deliver a significant number of affordable housing units in an area where a significant need has been identified.  | ++     |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | The site is under consideration for a mix of employment (B1 office use) and housing and does not promote community, leisure and recreational facilities, nor would it lead to a loss of a community facility. However given the scale of the proposed development there is likely to be potential for the provision of enhanced and/or new community facilities e.g. sustainable transport measures, play areas. | +      |

|   |   |  |           |
|---|---|--|-----------|
| <b>3. To maintain and improve access for all</b>            | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | <p>The site is located on the outskirts of Barry and is approximately 3 kilometres from the town's main retail centre and less than 2 kilometres from High Street district centre and Park Crescent local centre. The site is well located to access local bus routes which operate regular services along Pontypridd Road to numerous locations within the Vale. Rail services are accessible from within the town and provide regular and easy access to Cardiff and Bridgend; however the nearest station is approximately 2.5 kilometres away. However the site is separated from the main built up area of the town by the A4050 and while access via walking and cycling is possible, no crossing facilities exist.</p> <p>Future development could contribute to local sustainable transport improvements e.g. walking and cycling facilities to address the issues identified above.</p> | <b>++</b> |
| <b>4. Reduce the causes of deprivation</b>                  | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation. | Positive impact on reducing causes of deprivation given its promotion for employment and housing within an area ranked low against the indices of multiple deprivation.  | <b>++</b> |
| <b>5. To maintain, protect and enhance community spirit</b> | <p>The site would not lead to a coalescence of settlements.</p> <p>The site would not result in a loss in recreational land or a community facility.</p>  | <p>Development of this site would not lead to coalescence.</p> <p>The proposal would not result in the loss of recreational or community facilities however a PROW crosses the site and the openness of the area affords considerable visual amenity.</p>  | <b>0</b>  |

|  |  |   |           |
|--|--|---|-----------|
| <p><b>6. To minimise the causes and manage the effects of climate change</b></p> | <p>The site would not increase the need to travel and or increase travel distances</p> <p>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources</p> <p>The site is capable of incorporating renewable energy sources or energy conservation measures</p> | <p>The site is located on the outskirts of Barry and is approximately 3 kilometres from the town's main retail centre and less than 2 kilometres from High Street district centre and Park Crescent local centre. The site is well located to access to local bus routes which operate regular services along Pontypridd Road to numerous locations within the Vale. Rail services are accessible from within the town and provide regular and easy access to Cardiff and Bridgend; however the nearest station is approximately 2.5 kilometres away. The site is separated from the main built up area of the town by the A4050 and while access via walking and cycling is possible, no crossing facilities exist.</p> <p>Future development could contribute to local sustainable transport improvements e.g. walking and cycling facilities to address the issues identified above.</p> <p>Zone B flood risk and surface water flooding areas have been identified within the site and the EA have advised that consideration should be given to surface water disposal and management.</p> <p>Given the scale of the site under consideration, there is scope for the incorporation of renewable energy sources or energy conservation measures. In addition, future development of the site could incorporate sustainable development measures to address issues such as surface water run off.</p> | <p>+</p>  |
| <p><b>7. To minimise waste</b></p>   | <p>The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).</p>   | <p>Future development for employment and housing would generate additional commercial and domestic waste.</p>   | <p>--</p> |

|  |   |  |    |
|--|---|--|----|
| <b>8. To use land effectively and efficiently</b>  | <p>The site is a brownfield site and / or involves the beneficial re-use of existing buildings.</p> <p>The site is capable of accommodating high density development</p>  | <p>Development of the site would involve the loss of greenfield land that has been identified as Grade 3 on the 1966 Agricultural Land Classification map.</p> <p>The site is capable of accommodating medium/low density development to reflect the character of development within the immediate vicinity.</p>   | -- |
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | <p>The site is not located within a conservation area and development as proposed would not impact upon a historic garden or building of historic interest.</p> <p>Development of the site is likely to have a detrimental impact upon a number of local and national ecological and landscape designations, including Ancient Woodland, SSSI and SLA. The CCW have raised concerns over the development of the site and the impact that urbanisation of this site would have on the Barry Woodlands SSSI.</p> | -- |
| <b>10. To provide a high quality environment within all new developments</b>   | <p>The development has the potential to support high quality public realm.</p>  | <p>As an employment site within a wider housing development the site has the potential to develop a high quality public realm. The benefits of which would be felt by the residents and workers, with the potential to extend beyond the site given its prominence/location near the primary road network.</p>   | +  |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | <p>The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).</p>  | <p>Development of the site is likely to have a detrimental impact upon a national ecological designation namely the Barry Woodland SSSI and CCW have raised concerns over the development of the site and the impact that this would have on the designation.</p>  | -- |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range</p>   | <p>The site is located on the outskirts of Barry and is approximately 3 kilometres from the town's main retail centre and less than 2 kilometres from High Street district centre and Park</p>   | ++ |

|   |   |   |           |
|---|---|---|-----------|
|   | of transport modes including walking and cycling.   | <p>Crescent local centre. The site also lies within close proximity to services and facilities at Highlight Park and along Port Road e.g. supermarket, doctors and secondary schools.</p> <p>The site is well located to access local bus routes which operate regular services along Pontypridd Road to numerous locations within the Vale. Rail services are accessible from within the town and provide regular and easy access to Cardiff and Bridgend; however the nearest station is approximately 2.5 kilometres away.</p> <p>The site is separated from the main built up area of the town by the A4050 and while access via walking and cycling is possible, no crossing facilities currently exist. However, development as proposed could contribute to local sustainable transport improvements.</p> <p>Furthermore, the co-location of employment and residential uses on this site provides the opportunity for employees to live locally thereby reducing significant commuting.</p> |           |
| <b>13. To provide for a diverse and wide range of local job opportunities</b> | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p> | <p>The proposal is for 10ha of employment land as part of a wider housing development.</p> <p>The site would not result in a loss of employment land and development as proposed would further enhance the employment opportunities within the local area.</p> <p>This employment use is B1 office use to provide an edge of town Business Park location for Barry.</p>   | <b>++</b> |
| <b>14. To maintain and enhance the viability of the Vale's town, district</b> | The site is located either within a centre, edge of centre or an out of town location.  | The site is located on the outskirts of Barry and is in close proximity to local, district and town retail centres. However given the relative scale  | <b>0</b>  |

|   |  |  |          |
|---|--|--|----------|
| <b>and local centres</b>                  |  | of the proposed development to Barry, it is considered unlikely that any future development would have a noticeable affect upon the viability of any of these centres. |          |
| <b>15. To promote appropriate tourism</b> | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility. | The proposal would not contribute to the promotion or development of tourism within the Vale of Glamorgan.   | <b>0</b> |

### Effect Summary Table

|           |          |          |          |           |             |          |
|-----------|----------|----------|----------|-----------|-------------|----------|
| <b>++</b> | <b>+</b> | <b>0</b> | <b>-</b> | <b>--</b> | <b>+ /-</b> | <b>?</b> |
| <b>5</b>  | <b>3</b> | <b>3</b> | <b>0</b> | <b>4</b>  | <b>0</b>    | <b>0</b> |

### SA Summary Comments

The site is under consideration for a mixed use housing and employment (specifically B1 office use) development. 10ha is to be allocated for employment use within a wider housing allocation. The site is located on the outskirts of Barry and is approximately 3 kilometres from the town's main retail centre and less than 2 kilometres from High Street district centre and Park Crescent local centre. The site is well located to access local bus routes which operate regular services along Pontypridd Road and the A4050 to numerous locations within the Vale. Rail services are accessible from within the town and provide regular and easy access to Cardiff and Bridgend however the nearest station is approximately 2.5 kilometres away. The site is separated from the main built up area of the town by the A4050 and while access via walking and cycling is possible, no crossing facilities exist.

The proposal would involve development of greenfield land that has been identified as Grade 3 on the 1966 Agricultural Land Classification map. Development of the site is likely to have a detrimental impact upon a number of local and national ecological and landscape designations, including Ancient Woodlands, SSSI and SLA. The CCW have raised concerns over the development of the site and the impact that urbanisation of this site would have on the Barry Woodlands SSSI. Zone B flood risk and surface

water flooding have been identified within the site and the EA have advised that consideration should be given to surface water disposal and management.

## SA Assessment Criteria: The Triangle Site, Barry Waterfront

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |
| Development at the site would have positive and negative impacts on sustainability  | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria   | Effect   |
|---|---|---|----------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | The site has been promoted for tourism use therefore would not deliver a mix of housing tenures.  | <b>0</b> |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | <p>The site is promoted for leisure and tourism development, specifically a hotel, public house and restaurant.</p> <p>It would not lead to a loss of a community facility.</p> | <b>+</b> |

|   |   |  |            |
|---|---|--|------------|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | The site is within 100m of a bus stop and under 1km walk away from Barry and Barry Docks train stations.<br>The site is part of the Barry Innovation Quarter which provides services and facilities and is also located approximately 700m away from Barry Waterfront Park which includes a Morrison's superstore.   | <b>++</b>  |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.   | Given that the site has been promoted for tourism/recreation uses it is likely that there would be a minor positive impact on reducing causes of deprivation resulting from the creation of local employment.  | <b>+</b>   |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.   | Development of this site would not lead to coalescence.<br><br>The site is currently vacant and therefore would not result in the loss of a community facility.  | <b>0</b>   |
| <b>6. To minimise the causes and manage the effects of climate change</b> | The site would not increase the need to travel and or increase travel distances<br><br>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources<br><br>The site is capable of incorporating renewable energy sources or energy conservation measures | The site is within 100m of a bus stop and under 1km away from Barry and Barry Docks train stations, therefore sustainable transport is within walking/cycling distance of the site.<br>Around two thirds of the site lies within a B flood risk zone.<br>It is considered that there may be scope to incorporate renewable energy sources or energy conservation measures into the site. | <b>+/-</b> |
| <b>7. To minimise waste</b>   | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).   | The site would produce additional waste and no waste management facility is proposed.  | <b>-</b>   |
| <b>8. To use land effectively and efficiently</b>                         | The site is a brownfield site and / or involves the beneficial re-use of existing buildings.<br><br>The site is capable of accommodating high density development   | The site is brownfield and given the nature of the surrounding developments would be capable of accommodating high density development.  | <b>++</b>  |

|  |   |  |          |
|--|---|--|----------|
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | The proposal would not affect any of these designations.   | <b>0</b> |
| <b>10. To provide a high quality environment within all new developments</b>   | The development has the potential to support high quality public realm.   | The site has potential to develop a high quality public realm.   | <b>+</b> |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).   | The site is not located within a nationally or internationally designated ecological site. Close to the site is the North Hydraulic Pumping House listed building; development of this site could potentially have negative effects on this listed building.   | <b>?</b> |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p>   | <p>The site is within 100m of a bus stop and under 1km away from Barry and Barry Docks train stations; sustainable transport is therefore within walking/cycling distance of the site.</p> <p>The site is part of the Barry Innovation Quarter which provides services and facilities and is also located approximately 700m away from Barry Waterfront Park which includes a Morrison's superstore.</p> | <b>+</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>   | The site has been promoted for tourism/recreational uses; hotel, public house and restaurant. Development for these uses would provide local employment albeit at a limited level.   | <b>+</b> |
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b>                      | The site is located either within a centre, edge of centre or an out of town location.  | The site has been promoted for tourism/recreation uses; a hotel, public house and restaurant. It is unlikely that the proposal would have a significant impact upon the viability of the Vale's town and district centres.   | <b>+</b> |

|   |  |   |          |
|---|--|---|----------|
|   |  | As the site is proposed to be developed to accommodate visitors it could be assumed that a limited benefit would result however this is likely to be highly localised.                |          |
| <b>15. To promote appropriate tourism</b> | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility. | The site has been promoted for tourism (hotel, public house and restaurant) on a currently vacant and prominent site. Development of the site would help to enhance tourism in Barry. | <b>+</b> |

### Effect Summary Table

| <b>++</b> | <b>+</b> | <b>0</b> | <b>-</b> | <b>--</b> | <b>+/-</b> | <b>?</b> |
|-----------|----------|----------|----------|-----------|------------|----------|

### SA Summary Comments

This site is promoted for tourism use, specifically a hotel, public house and restaurant, extent planning permission has previously been granted for a hotel on this site (2011/0745/FUL). The site is located at Barry waterfront and has good access to sustainable transport and existing services and facilities; it is within 100m of a bus stop and under 1km away from Barry and Barry Docks train stations. The site is part of the Barry Innovation Quarter which provides services and facilities and is also located approximately 700m away from Barry Waterfront Park which includes a Morrison's superstore.

The site is brownfield and given the nature of the surrounding developments would be capable of accommodating high density development. Around two thirds of the site lies within a B flood risk zone.

## SA Assessment Criteria: Land at Nell's Point, Whitmore Bay

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |
| Development at the site would have positive and negative impacts on sustainability  | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria  | Effect   |
|---|---|--|----------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | The site is not under consideration for housing and will not contribute to additional housing including affordable housing.  | <b>0</b> |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | <p>The site is under consideration for tourist related uses that will assist in the ongoing viability of Whitmore Bay. While no definitive final use has been identified, the site is seen as important to the future role of Whitmore Bay and it is likely that any additional facilities would be available and benefit the general population.</p> <p>The site is currently vacant and future development would not result in a loss of a</p> | <b>+</b> |

|   |   |   |           |
|---|---|---|-----------|
|   |   | local facility.   |           |
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | The site is located within the tourist centre of Whitmore Bay and is easily accessible by a range of sustainable transport modes including walking and cycling, regular rail and bus services. It is likely that future development on this and other sites within the area would contribute to additional or improved sustainable transport provision.   | <b>++</b> |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.   | It is unlikely that development of the site for tourist related uses would contribute significantly to reducing the causes of multiple deprivation, However dependent upon the final use of the site, a level of local employment may be generated.   | <b>0</b>  |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.   | Development of the site would not lead to the coalescence of settlements.   | <b>0</b>  |
| <b>6. To minimise the causes and manage the effects of climate change</b> | The site would not increase the need to travel and or increase travel distances<br><br>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources<br><br>The site is capable of incorporating renewable energy sources or energy conservation measures | The site is located within the tourist centre of Whitmore Bay and is easily accessible by a range of sustainable transport modes including walking and cycling, regular rail and bus services. It is likely that future development on this and other sites within the area would contribute to additional or improved sustainable transport provision.<br><br>The site is unaffected by flooding and would not impact upon the quality of water resources.<br><br>Dependent upon the final uses of the site there may the potential for the incorporation of limited sustainable energy conservation/generation measures. Future development would be required to comply with current energy | <b>++</b> |

|  |  |   |    |
|--|--|---|----|
|  |  | conservation requirements.  |    |
| <b>7. To minimise waste</b>  | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).  | Any future development would generate additional commercial waste.  | -  |
| <b>8. To use land effectively and efficiently</b>  | The site is a brownfield site and / or involves the beneficial re-use of existing buildings.<br><br>The site is capable of accommodating high density development  | This is a brownfield site within a built up area however it is in a coastal location and future development would be highly visible.  | +  |
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.<br><br>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation. | The site lies within the Barry Marine Conservation Area and any future development would need to be sensitive to the requirements of the conservation area as detailed within the conservation area appraisal.  | -  |
| <b>10. To provide a high quality environment within all new developments</b>   | The development has the potential to support high quality public realm.  | Being considered for a local tourist related use, the development has the potential to contribute to high quality public realm.   | +  |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).  | The site is unaffected by any nationally or internationally designated ecological site or area of archaeological or historical importance.  | 0  |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | The site is well served by public transport and accessible by walking and cycling.<br><br>Services and facilities are easily accessible by a range of transport modes including walking and cycling.   | The site is located within the tourist centre of Whitmore Bay and is easily accessible by a range of sustainable transport modes including walking and cycling, regular rail and bus services. ### SA Summary Comments

The assessment of this site generates a strong positive outcome against the sustainability indicators. This results from the location of the site within a tourist area and its consideration for future tourist uses and the fact that the site is readily accessible by a range of sustainable transport modes. No major designations impact upon the site however the site is located within the Barry Marine Conservation Area. Notwithstanding this, the current status of the site does little to enhance this designation and future development is likely to improve rather than detract from the conservation area designation. Any future tourist related uses would assist in supporting the viability of the Barry island tourist centre.

## SA Assessment Criteria: The Triangle Site, Barry Waterfront

## SITE ASSESSMENT STAGE 3: SUSTAINABILITY APPRAISAL

| Assessment Criteria   | Effect |
|---|--------|
| Development at the site will have a positive impact on sustainability   | ++     |
| Development at the site will have a some positive impact on sustainability  | +      |
| Development at the site will have a negligible or neutral impact on sustainability. A recorded neutral effect does not necessarily mean there will be no effect at the site level, but shows that at this strategic level there is no identifiable effects. | 0      |
| Development at the site will have a slight negative impact on the sustainability.   | -      |
| Development at the site will have a very negative impact on sustainability  | --     |
| The impact of an issue cannot be predicted at this stage  | ?      |
| Development at the site would have positive and negative impacts on sustainability  | +/-    |

| Sustainability Objective  | Appraisal guidance notes:   | Assessment Criteria   | Effect   |
|---|---|---|----------|
| <b>1. To provide the opportunity for people to meet their housing needs</b> | <p>The site has the potential to deliver a mix of housing tenures including affordable housing (achievable on larger sites through 106 agreements).</p> <p>Whole or part of the site has been promoted for affordable housing.</p> <p>The site is located in an area of housing need as identified in the Housing Market Assessment Study</p> | The site has been promoted for tourism use therefore would not deliver a mix of housing tenures.  | <b>0</b> |
| <b>2. To maintain, promote and enhance the range of local facilities</b>    | <p>The site is promoted for community, leisure and recreational facilities.</p> <p>The proposal would not lead to a loss of a community facility.</p> <p>The site has the potential to provide community facilities.</p>  | <p>The site is promoted for leisure and tourism development, specifically a hotel, public house and restaurant.</p> <p>It would not lead to a loss of a community facility.</p> | <b>+</b> |

|   |   |  |            |
|---|---|--|------------|
| <b>3. To maintain and improve access for all</b>                          | Existing services and facilities are easily accessible from the site by walking, cycling or public transport.   | The site is within 100m of a bus stop and under 1km walk away from Barry and Barry Docks train stations.<br>The site is part of the Barry Innovation Quarter which provides services and facilities and is also located approximately 700m away from Barry Waterfront Park which includes a Morrison's superstore.   | <b>++</b>  |
| <b>4. Reduce the causes of deprivation</b>                                | The development would lead to improved access to employment, housing, health, education facilities or enhancement of the built environment for wards ranked in the lower Indices of Multiple Deprivation.   | Given that the site has been promoted for tourism/recreation uses it is likely that there would be a minor positive impact on reducing causes of deprivation resulting from the creation of local employment.  | <b>+</b>   |
| <b>5. To maintain, protect and enhance community spirit</b>               | The site would not lead to a coalescence of settlements.<br><br>The site would not result in a loss in recreational land or a community facility.   | Development of this site would not lead to coalescence.<br>The site is currently vacant and therefore would not result in the loss of a community facility.  | <b>0</b>   |
| <b>6. To minimise the causes and manage the effects of climate change</b> | The site would not increase the need to travel and or increase travel distances<br><br>The site is not located within an area prone to flood risk or would will have a negative effect on the quality of water resources<br><br>The site is capable of incorporating renewable energy sources or energy conservation measures | The site is within 100m of a bus stop and under 1km away from Barry and Barry Docks train stations, therefore sustainable transport is within walking/cycling distance of the site.<br>Around two thirds of the site lies within a B flood risk zone.<br>It is considered that there may be scope to incorporate renewable energy sources or energy conservation measures into the site. | <b>+/-</b> |
| <b>7. To minimise waste</b>   | The site will have a positive impact on waste minimisation (e.g. a proposal for new waste management facility).   | The site would produce additional waste and no waste management facility is proposed.  | <b>-</b>   |
| <b>8. To use land effectively and efficiently</b>                         | The site is a brownfield site and / or involves the beneficial re-use of existing buildings.<br><br>The site is capable of accommodating high density development   | The site is brownfield and given the nature of the surrounding developments would be capable of accommodating high density development.  | <b>++</b>  |

|  |   |  |          |
|--|---|--|----------|
| <b>9. To protect and enhance the built environment and natural environment</b>                                       | <p>The proposal would have a neutral or positive effect on a conservation area, or buildings or gardens designated as having historic interest.</p> <p>The proposal will have a neutral or positive effect on biodiversity, landscape or nature conservation designation.</p> | The proposal would not affect any of these designations.   | <b>0</b> |
| <b>10. To provide a high quality environment within all new developments</b>   | The development has the potential to support high quality public realm.   | The site has potential to develop a high quality public realm.   | <b>+</b> |
| <b>11. To protect, enhance and promote the quality and character of the Vale of Glamorgan's culture and heritage</b> | The site is not located within a nationally or internationally designated ecological site, an Area of Archaeological or Historical Importance (e.g. Ancient monument, listed buildings, conservation area).   | The site is not located within a nationally or internationally designated ecological site. Close to the site is the North Hydraulic Pumping House listed building; development of this site could potentially have negative effects on this listed building.   | <b>?</b> |
| <b>12. To reduce the need to travel and enable the use of more sustainable modes of transport</b>                    | <p>The site is well served by public transport and accessible by walking and cycling.</p> <p>Services and facilities are easily accessible by a range of transport modes including walking and cycling.</p>   | <p>The site is within 100m of a bus stop and under 1km away from Barry and Barry Docks train stations; sustainable transport is therefore within walking/cycling distance of the site.</p> <p>The site is part of the Barry Innovation Quarter which provides services and facilities and is also located approximately 700m away from Barry Waterfront Park which includes a Morrison's superstore.</p> | <b>+</b> |
| <b>13. To provide for a diverse and wide range of local job opportunities</b>  | <p>The proposal is for new employment development</p> <p>The site would not result in a loss of employment land that has been identified as having a continued economic role.</p>   | The site has been promoted for tourism/recreational uses; hotel, public house and restaurant. Development for these uses would provide local employment albeit at a limited level.   | <b>+</b> |

|   |  |   |          |
|---|--|---|----------|
| <b>14. To maintain and enhance the viability of the Vale's town, district and local centres</b> | The site is located either within a centre, edge of centre or an out of town location.                             | The site has been promoted for tourism/recreation uses; a hotel, public house and restaurant. It is unlikely that the proposal would have a significant impact upon the viability of the Vale's town and district centres. As the site is proposed to be developed to accommodate visitors it could be assumed that a limited benefit would result however this is likely to be highly localised. | <b>+</b> |
| <b>15. To promote appropriate tourism</b>   | The proposal is either for a new or enhanced tourism facility or would not result in a loss of a tourism facility. | The site has been promoted for tourism (hotel, public house and restaurant) on a currently vacant and prominent site. Development of the site would help to enhance tourism in Barry.   | <b>+</b> |

#### Effect Summary Table
